THE REASON FOR THIS MAGAZINE

News sources that are able to keep you awake to the vital issues of our times must be unfettered by censorship and selfish interests. "Awake!" has no fetters. It recognizes facts, faces facts, is free to publish facts. It is not bound by political ties; it is unhampered by traditional creeds. This magazine keeps itself free, that it may speak freely to you. But it does not abuse its freedom. It maintains integrity to truth.

The viewpoint of "Awake!" is not narrow, but is international. "Awake!" has its own correspondents in scores of nations. Its articles are read in many lands, in many languages, by millions of persons.

In every issue "Awake!" presents vital topics on which you should be informed. It features penetrating articles on social conditions and offers sound counsel for meeting the problems of everyday life. Current news from every continent passes in quick review. Attention is focused on activities in the fields of government and commerce about which you should know. Straightforward discussions of religious issues alert you to matters of vital concern. Customs and people in many lands, the marvels of creation, practical sciences and points of human interest are all embraced in its coverage. "Awake!" provides wholesome, instructive reading for every member of the family.

"Awake!" pledges itself to righteous principles, to exposing hidden foes and subtle dangers, to championing freedom for all, to comforting mourners and strengthening those disheartened by the failures of a delinquent world, reflecting sure hope for the establishment of God's righteous new order in this generation.

Get acquainted with "Awake!" Keep awake by reading "Awake!"

London, England, August 22, 1969

Number 16

Take the WISE VIEW of pleasures

THE Creator purposed that man find pleasure in living. That is why he made us with the capacity of entertaining ourselves and others with such skills as music. And the Creator also arranged for us to get pleasure out of satisfying our basic needs, even as his Word tells us: "Go, eat your food with rejoicing and drink your wine with a good heart . . . See life with the wife whom you love." Yes, God's Word does not condemn pleasures in themselves. —Eccl. 9:7, 9.

Jesus Christ, the Son of God, set the example for us in enjoyment of life as in other things. He was no ascetic. He enjoyed the pleasures of friendship, such as visiting at the home of his friend Lazarus. We also read of his being present at a wedding feast in Cana; and on that occasion, far from being averse to the festivities, he miraculously changed water into wine, that good cheer might continue. —Luke 10:38-42; John 2:1-11; 11:1-44.

Nevertheless, the Word of God counsels

us against attaching too much importance to the enjoyment of pleasures; we are not to pursue them avidly or greedily. Man should eat to live, not live for the pleasure of eating. At the same time God's Word forbids certain "pleasures" entirely.—Phil. 3:19.

To make the pursuit of pleasure one's chief or sole goal in life is what is called "hedonism"; this is the pagan philosophy that says, "Let us eat and drink, for tomorrow we are to die." Such a selfish and materialistic philosophy is to be condemned, even as are gluttony and drunkenness: "Do not come to be among heavy drinkers of wine, among those who are gluttonous eaters of flesh. For [they] will come to poverty"—not only financially but also in health.—1 Cor. 15:32; Prov. 23:20, 21.

The same principle applies to the pleasures of participating in sports. In moderation sports can be of some benefit. Under the right circumstances they can provide wholesome association, entertainment and physical exercise, which is good for both body and mind. Sports, whether active or the spectator kind, as well as other forms of recreation and relaxation, have their place. But it is not wise to rob oneself of necessary sleep or rest for the sake of indulgence in such pleasures; yet how

many do that very thing! Neither should indulgence in these pastimes loom up so prominently in one's life as to cause one to slight one's obligations to one's Maker and to one's family or fellowman.—1 Tim. 4:8.

Jesus, in his parable of the sower, warned against letting the "pleasures of this life" choke out the seed of God's truth, resulting in unfruitfulness. The Bible counsels: "Let your reasonableness become known to all men"; that is, be moderate, reasonable in all your activities and relations with others. Becoming unbalanced in the pursuit of such pleasures is not being reasonable.—Luke 8:14; Phil. 4:5.

Forbidden "Pleasures"

Then again, there are certain "pleasures" that should be avoided altogether, both because of the principles they violate as well as the harm in which they result. Among such is the smoking of tobacco. The tobacco habit is costly, not only in dollars and cents, but also in health. In fact, ever more and more evidence comes to light underscoring the fact that smoking is a forbidden "pleasure" to those who would be wise. Typical are the findings published in *Today's Health*, September 1968, under the title, "Researchers Strengthen Case Against Smoking."

There is also the questionable pleasure of gambling. It encourages selfishness, for it is, in effect, a form of extortion. Besides, how often those who indulge in it become compulsive gamblers! Thus in the United States alone today there are some six million compulsive gamblers, living in a fantasy world. Their addiction causes many to turn to thievery and even to suicide.—*Science Digest*, April 1968.

Also to be avoided are promiscuous sex relations. When we consider the venereal disease, the illegitimacy, the broken homes

and other unhappiness caused by these, the wisdom of God's Word in forbidding the "pleasures" of promiscuous sex is obvious.—Heb. 13:4.

Wisdom dictates avoiding not only the "pleasures" of promiscuous sex relations but also those things that tend to lead to them, such as petting. Such pleasures God's Word limits to those in the wedded state. (Prov. 5:15-20) The wise course is to 'make straight paths for your feet.' This is also the loving course, as it prevents one from stumbling another.—Heb. 12:13.

Seeking Pleasures Through Drugs

Presently the pursuit of pleasures on the part of many youths has taken the form of indulging in marijuana and, to a lesser extent, LSD and other drugs. While there are comparatively few defenders of LSD among professional people, there are many of these that argue that there is no difference between drinking wine and smoking marijuana. They see no harm in the fact that in some United States cities from 50 to 75 percent of the high-school students smoke "pot," as it is called, and that of these an estimated one-third are habitual users. At present there is a widespread movement afoot to legalize the use of marijuana.

But the committee of the American Medical Association dealing with such problems has gone on record in declaring that marijuana "is a dangerous drug and as such is a public health concern." (*Newsweek*, July 1, 1968) And six months previously, Massachusetts Superior Court Chief Justice G. Joseph Tauro upheld the ban on marijuana, saying among other things:

"It is my opinion, based on the evidence presented at this hearing, that marijuana is a harmful and dangerous drug. As far as I can ascertain, its only purpose is the

induction of a state of intoxication or euphoria. The drug has a great attraction for young men and women of college age or less during their formative years, when they should be gaining the education and experience upon which to build their future lives. The use of the drug allows them to avoid the resolution of their underlying problems rather than to confront them realistically. . . . The coincidence between addiction to 'hard' narcotics, crime and promiscuity is too great to be passed off as merely accidental."—*Time*, December 29, 1967.

This forthright opinion by a learned judge underscores the folly of pursuing pleasure for its own sake without taking into consideration the consequences.

Spiritual Pleasures

Pleasures might be placed in three basic categories. There are those that are good in themselves if enjoyed in moderation. And there are those "pleasures," 'sensual pleasures' and suchlike, that are to be strictly avoided as both unlawful and harmful. And there are also pleasures that should be assiduously cultivated. Cultivate pleasures? Yes, just as some people have learned to acquire a taste for olives, celery and other foods, there are pleasures, spiritual pleasures, for which a "taste" can be developed or acquired on the part of imperfect humans whose tendencies are toward earthly, selfish things.

The Bible tells that Jesus Christ, both before coming to earth and while on earth, received joy, pleasure, delight from doing his Father's will. (Prov. 8:30; Ps. 40:8) Just think of the pleasure that Jesus must have derived from watching many thousands satisfy their hunger with bread and fish that he had provided miraculously! How great must have been his pleasure in restoring sight to the blind, hearing to the deaf, strength of limb to

the cripple and the paralytic! And what a pleasure it must have been to him to preach the Kingdom good news offering freedom from bondage and release from heavy burdens!—Matt. 11:28-30; John 8:31, 32.

While Christ's followers today cannot perform miracles, they can enjoy spiritual pleasures of both receiving and giving, and they are urged to cultivate these. Among such is the taking in of knowledge of Jehovah God, his dealings and purposes. Thus the psalmist wrote: "I am exulting over your saying just as one does when finding much spoil." How enjoyable it can be to take in Bible truths the Christian witnesses of Jehovah especially get to appreciate at their larger assemblies.—Ps. 119:162.

Even greater are the pleasures of generosity, of unselfishly serving or giving to others. This is not a farfetched idea at all, but in one way or other is generally recognized. For example, who does not like to entertain or play the host to a group of friends? And so as Christian ministers attend to the spiritual need of others and they find someone appreciative of their efforts and conscious of his spiritual need, they derive genuine pleasure from their activities. As one young full-time pioneer preacher put it at a recent assembly: Pioneering gives the most of the greatest pleasure there is, helping others to take their stand for Jehovah. It is even as Jesus said: "There is more happiness in giving than there is in receiving."—Acts 20:35.

So take the wise view of pleasures. Avoid those that are forbidden. Be moderate in the enjoyment of mundane pleasures. And keep cultivating the spiritual pleasures, which benefit others as well as yourself and bring honor to your Maker, Jehovah God.

IS IT reasonable to think that because people live on different continents their worship of God should be different? Is difference in skin color reason for a difference in the way one worships God? Should the language one speaks affect true worship, or should a contrast in customs or dress do so?

Consider such questions in the light of what the Bible says about God: "He himself gives to all persons life and breath and all things. And he made out of one man every nation of men, to dwell upon the entire surface of the earth, and he decreed the appointed seasons and the set limits of the dwelling of men, for them to seek God."—Acts 17: 25-27.

How clear it is that Jehovah God provides for all humans, regardless of race or nationality! All of mankind descended from the "one man" created by God. Thus, no matter where one might live, under whatever conditions, the true worship of Jehovah does not change due to any of man's natural conditions.

Fixed Laws of God

In the same way physical laws established by God to govern the universe do not change from country to country. These laws are fixed. All humans, regardless of race or nationality, are affected similarly by them.

*Do the practices of your religion vary from place to place?
Is there a religion that truly is the same everywhere?*

Gravity, for example, is universal. Long ago the Bible acknowledged the law of gravity when it said about God: "He is stretching out the north over the empty place, hanging the earth upon nothing." (Job 26:7) The gravitational pull of the sun upon the earth is a chief factor responsible for 'the earth's hanging

upon nothing.' In more recent times Sir Isaac Newton expressed the law of gravity in greater detail. It is an unchangeable law established by God. Territorial boundaries, or the language or customs of people do not affect it.

From another viewpoint, any particular individual at any given spot on earth can break one of God's natural laws and feel the adverse effects. If he eats too much, he gets sick. If he drinks intoxicating liquors to excess, certain natural laws will tell him about this regardless of his nationality or the language he speaks. There is a reaction that he cannot escape, because God's laws govern.

This is much the same with God's laws concerning our spiritual life. They too apply earth wide. They come from God, and so they do not change. And just as when man breaks one of God's fixed natural laws he gets into trouble, so likewise with Jehovah's laws on right worship. Break one of them, and eventually you will begin to feel the adverse effects.

Prohibition of Spiritism

Take as an example God's law prohibiting all forms of spiritism. His Word says: "There should not be found in you anyone who makes his son or his daughter pass through the fire, anyone who employs divination, a practitioner of magic or anyone who looks for omens or a sorcerer, or one who binds others with a spell or anyone who consults a spirit medium or a professional foreteller of events or anyone who inquires of the dead." (Deut. 18: 10-12) This law applies to all of God's servants everywhere on earth. And violation of it by meddling in spiritism can only lead to adverse effects.

Why is this? Because spiritism is not of God, but Satan the Devil and his demons are behind it. The aim of these wicked spirit forces is to mislead and deceive mankind, and it is through spiritistic practices that the demons are often successful in doing this. The demons actually operate through sorcerers, spirit mediums and persons of that kind, and they have been able to bring much mental and even physical sickness upon those who dabble in spiritism.

How valuable, therefore, is the counsel of God's Word, which condemns spiritistic practices! Such practices are included among the schemes or machinations of the Devil, and the Bible urges: "Stand firm against the machinations of the Devil; because we have a fight . . . against the wicked spirit forces in the heavenly places." (Eph. 6:11, 12) Thus, true worshipers everywhere will take a firm stand against spiritism. In every country on earth true religion will have nothing to do with spiritistic practices.

Yet what do we find to be the case with religions of Christendom? Is the worship of their adherents the same everywhere?

Not the Same Everywhere

Time magazine of February 14, 1969, quoted one psychologist as saying of Brazil: "Brazil is ostensibly a Catholic country, but it is not really Catholic. African rites were brought over by slaves, and the lower-class people who practice spiritism have adopted Catholic saints and some Catholic rituals. They use the Catholic icons [images] to represent their African gods."

Yes, in Brazil one can be both a Roman Catholic and a spiritist. One writer speaks of the majority of Brazilians as adhering to what he called a "synthesis of Catholicism, Africanism, and spiritism." The Catholic Church accepts thousands and thousands of spiritists into her fold, thus mixing demonic worship and other Catholic practices.—Ps. 106:34-38; Gal. 5:19-21; Rev. 21:8.

However, on learning of this, many Catholics in other Latin American countries and elsewhere are aghast. They express themselves as not understanding how the Catholic Church permits such spiritistic practices within her ranks. Certainly the worship practiced by Catholics is not the same everywhere. How, then, could it be true worship?

Attitude Toward Bullfighting

Consider another example. Bullfighting in Lima, Peru, is one of the principal attractions each October during the religious celebrations of the "Lord of miracles." A Lima newspaper observed: "Since 1946, for twenty-one years the celebration of the Lord of miracles is carried on where the winner [of the bullfight] is awarded the 'escapulario' medallion which is esteemed as one of the most important in the world of bullfighting."

The world of bullfighting is closely linked with Catholic worship. Every bull-

ring has its private chapel or altar with its Catholic saint. The toreador prays either to the patron saint of bullfighters, the virgin of Soledad, or to his own private saint, evoking protection from the bull. Then, too, there can be little question about the religion of the majority of spectators who wildly acclaim the spectacle—they are Roman Catholics.

Nevertheless, there are many Catholics who consider bullfighting to be just as cruel and barbaric as it really is. They can see how opposed it is to God's instructions to man to exercise proper dominion over the lower animals. (Gen. 1:28) In fact, Catholic countries in South America are split over the legality of bullfighting. Some permit it; others outlaw it.

Thus, from country to country the practices and religious attitudes of Roman Catholics change. They are divided on what they consider or accept as truth in their worship. They are not united in the same mind on matters. This can also be said of Protestant religious organizations that teach and practice certain things in one area and something else in another place.

Unity That Identifies True Worship

True worship, on the other hand, is the same everywhere. This does not mean that all true worshipers of God dress and eat alike, or are identical in other customs. Customs may change due to locality or environment. Individual tastes, likes and dislikes, induce periodic changes. But these changes or differences among true worshipers do not in any way affect their common adherence to the laws and teachings of God as found in the Bible.

True worshipers everywhere comply with this counsel of the Christian apostle Paul: "Now I exhort you, brothers, through the name of our Lord Jesus Christ

that you should all speak in agreement, and that there should not be divisions among you, but that you may be fitly united in the same mind and in the same line of thought." (1 Cor. 1:10) In what religious organization is this sameness of mind and thought everywhere evident today?

It is evidenced among Jehovah's witnesses. Only one kind of religion is permitted among them. That is the religion of the Bible. (John 4:23, 24) One cannot be a witness of Jehovah and at the same time practice spiritism. Nor would a witness of Jehovah ever participate in the celebration of the "Lord of miracles" by entering a bullfighting ring.

This unity among Jehovah's witnesses is also evident by their application of God's high moral standards everywhere. Regardless of where you might go in the earth, nowhere would you find persons permitted to remain a part of the Christian organization of Jehovah's witnesses who practice fornication, adultery or homosexuality. Even in countries where polygamy and other abuses are common, such unbiblical practices must be eliminated from the lives of individuals before they are permitted to become a part of the Christian organization.

Yes, Jehovah's witnesses everywhere practice the religion of the Bible. They speak to others about it, even as Jesus Christ did and commanded his followers to do. (Matt. 28:19, 20) As a result many persons today are being helped to put away their unscriptural practices. And they are being helped to become a part of a clean organization that *everywhere* is united in the true worship of Jehovah God. Are you interested in serving God with such a united people? One of Jehovah's witnesses would be happy to call on you free of charge and assist you to this end.

FROM OVER

A HUNDRED

LANDS

THEY CAME

“WE ARE so glad they are here.” With those words, the Watch Tower Society’s president, N. H. Knorr, expressed to a crowd of over 100,000 delegates to the “Peace on Earth” International Assembly of Jehovah’s Witnesses at New York’s Yankee Stadium, the joy of having delegates present from so many countries. Yes, for New York’s assembly alone, they had come from over a hundred lands to receive instruction from God’s Word the Bible!

Over 6,000 delegates had come from Europe, with thousands more from Central and South America and the Caribbean area. When this was stated from the platform, loud applause from the audience showed the keen joy the Witnesses felt due to the united and peaceful gathering of so many conventioners from all parts of the world.

The assembly in New York city, the Society’s president also explained, was especially privileged to have branch servants of the Watch Tower Society personally relate experiences from all around the world, telling the conventioners just what is happening in connection with the preaching of God’s kingdom in their lands. How thrilling it was to hear these reports!

Arrival of Delegates

At least forty-five charter flights brought delegates from abroad to the New

York assembly, and many scheduled airliners brought smaller groups. What a busy time it was for the local Witnesses who, out of loving concern for their Christian brothers from other lands, welcomed the delegates at Kennedy International Airport! Two twelve-hour shifts were maintained at the airport to care for the delegates.

Talking with the delegates at the airport, those on the welcoming staff learned that for most of them it was their first time to visit New York. Aboard one flight was seventy-two-year-old Henri Pougeol, who had never before traveled outside Guadeloupe. But he was soon made to feel right at home.

Those welcoming the delegates found it to be very exciting. Sometimes delegates arrived in their native costumes, as did more than twenty Liberian delegates. Their arrival caused many persons at the airport to take an interest and to inquire about their visit. About ten of these Liberians had proved their faithfulness under a severe test of integrity in 1963, and now the American Witnesses were on hand to meet these faithful brothers.

Day after day brought charter planes filled with Witnesses—from Stuttgart, Helsinki, Amsterdam, Glasgow, London, Kingston, Frankfurt, Brussels, Hamburg, San Juan, Vienna, Copenhagen, Zurich, Düsseldorf, St. Thomas, Cologne, Munich,

Delegates arriving in New York from Brazil and the Caribbean

Stockholm, Buenos Aires and Paris. Some of these cities sent a number of planes. When two charter flights arrived at about the same time, it was an especially busy time for the welcomers. Charter buses took many of the delegates to the Watchtower Society's factory at 77 Sands Street, which was used as a reception center.

As bus after bus unloaded delegates at the Sands Street factory, the area would be abuzz with excitement.

To facilitate the delegates' getting to their accommodations, they were each assigned to one of four groups upon arrival. Group One was those who had no accommodations and who needed to have such. Group Two was those who were staying in New Jersey and who would be taken there in the automobiles of Witnesses from that area, about 150 volunteering. Group Three was those delegates who would be taken by auto to their accommodations in New York city and suburbs by a force of about 200 drivers, Witnesses who kindly volunteered their autos and time free of charge. Group Four was those who would be taken to their accommodations by subway, being guided by some forty young Witnesses, many of them teen-agers who volunteered their time to take foreign delegates right to their rooms.

But what about those delegates who arrived from abroad in the middle of the

night? Provisions were made for them to sleep on air mattresses at the reception center. On a few nights, all 500 of the mattresses were occupied, as planes would bring in from 150 to 200 delegates each.

Since each plane would bring in many Witnesses, sometimes two planes arriving at the same time, the place would swarm

with convention delegates! Hence there were times when there were delays, but the delegates were patient. Many of the Danish, Norwegian, Swedish, Finnish and other foreign delegates remarked appreciatively about the spirit of helpfulness shown by the local Witnesses.

Great efforts were made to assign foreign delegates, many of whom came from lands with currency restrictions, to rooms that had been offered free of charge or at low cost by hospitable persons.

Foreign-Language Meetings a Blessing

The "Peace on Earth" International Assembly in New York was unique in that meetings were held for nine days. Two days before the seven-day assembly at Yankee Stadium opened, foreign delegates assembled in various Kingdom Halls to hear upbuilding Bible counsel that English-speaking delegates would enjoy later. Also, the foreign-speaking delegates were given descriptions of the dramas that would be enacted at Yankee Stadium to portray Bible events and the application of God's Word to the problems of modern-day life. This proved to be most beneficial, as it enabled them to benefit richly from watching the dramas even though they did not know much English.

Also, during the week of the assembly

at Yankee Stadium, on four mornings meetings in fourteen languages were in session simultaneously in various parts of the stadium. For the Witnesses from Surinam, Belgium, the Netherlands, France, Germany, Italy, Japan, Norway, Denmark, Sweden, Finland, Greece, Brazil, Portugal and Arabic-speaking lands, it was a wonderful blessing to hear the program in their native tongues. Observed one Dutch Witness: "How grateful we really are for the provision of the foreign-language meetings!"

The need for such an arrangement can be seen in the fact that in some groups only about 10 percent could speak English. And they also put forth an earnest effort to attend. An elderly couple from Amsterdam (he being eighty-four and she seventy years of age) were among those on hand.

Those attending the large German-language meetings were able to meet a number of Witnesses who had been in Hitler's concentration camps because they would not compromise Christian principles. One of these, Charlotte Müller, has

Peak attendance at foreign-language meetings

Arabic	72
Armenian	43
Chinese	29
Danish	529
Dutch	244
Finnish	177
German	4,148
Greek	312
Italian	400
Japanese	85
Norwegian	90
Polish	241
Portuguese	423
Swedish	538

known God's truth since 1919. She was jailed by Hitler and spent nine years in the Ravensbrück concentration camp. Then in East Germany, under Communist rule, she was imprisoned again for six years. She had spent almost fifteen years in prisons and camps because of her faith in God and his kingdom, and here she was among the happy integrity keepers at the German-language meetings.

The entire program that was heard in English at Yankee Stadium was also put on in

French and Spanish in large tents near the stadium. There was much enthusiasm at these French and Spanish gatherings. Observers at the French assembly, for example, noted that the Bible dramas were put on with great feeling and liveliness, fine gestures and a naturalness that was exemplary. Even the preparation of the dramas was international, four of them being prepared by Witnesses in Quebec, Canada, and two by Witnesses in France. Peak attendance for the French and Spanish assemblies came on Sunday, during the

Upward of 2,500 came from Germany; many attended special programs in New York before assembly opened at Yankee Stadium

Sessions were held in seventeen languages at Yankee Stadium; Danish group shown here

public talk "The Approaching Peace of a Thousand Years." At the French assembly were 2,684, and for the Spanish assembly, 14,444. This plus the huge crowd of 104,883 persons at Yankee Stadium made a total of 122,011 that heard this inspiring talk in New York!

A high point at many of the foreign-language meetings was the release of the songbook *"Singing and Accompanying Yourselves with Music in Your Hearts"* in Danish, Dutch, Spanish, Swedish, German and French. French-speaking delegates were so enthusiastic that they took up many sets of music records to bring back home so as to learn the songs better. Spanish-speaking delegates were especially happy about the new songbook, for most of them had come with no songbooks, the supply of old ones having run out long ago. Some Spanish-speaking delegates said they had wanted a songbook in their language "more than anything else."

Another language used at the "Peace on Earth" International Assembly was sign language—a provision for the deaf to benefit spiritually from the fine program. At the part of the stadium set aside for the deaf were also foreign delegates—three deaf-mute couples from Zurich who could lip-read German.

Tour of Society's Headquarters

Why had so many thousands of foreign delegates chosen New York as their assembly city? Not only to attend the assembly, but also to see the world headquarters of Jehovah's witnesses, the Bethel Home including the recently completed new building, and the Watchtower Society's Brooklyn printing factories.

On the Saturday and Sunday before the assembly thousands made a tour of the Society's headquarters. About 50 percent were from foreign lands. And how delighted they were with what they saw! Expressions of appreciation were numerous. The following are a few of the comments.

England: "It was worth coming three thousand miles." Puerto Rico: "We appreciated so much the Bethel brothers staying at their work so we could all see the factory in operation." Argentina: "What impressed me is seeing publications in so many languages; this helps us see that we are doing a work that is educating the people of the whole world." Japan: "I felt like the Queen of Sheba when she saw Solomon's glory; the half had not been told me." Japanese delegates often remarked about the factory's machine shop and ink room being as clean as other parts of the factory! Other foreign delegates said: "I never expected it to be so big." "What we noticed most of all were the happy faces." "It is the best thing I ever saw in my life!"

Also illustrating the great interest the foreign delegates had in the Society's headquarters is the fact that great numbers of them took a bus trip to visit the 1,500-acre Watchtower Farm, which provides much of the food for the headquarters family.

During the assembly week, as well as a few days before and after, more than 14,000 of Jehovah's witnesses made a tour of the Society's Bethel Home and over 20,000 toured the printing factories.

Many Full-Time Preachers Present

In his closing remarks at Yankee Stadium, the Society's president stated that 1,420 missionaries were assisted financially to attend the "Peace on Earth" International Assembly somewhere in the world. Where did the help come from? From Jehovah's people throughout the world. And at the various convention cities special missionary meetings were held.

At the New York assembly, 478 missionaries met at the Society's headquarters on Saturday morning, July 12. Brother Knorr spoke to them on the need for endurance, and about fifteen of them from early classes of the missionary school of Gilead spoke to the group, to encourage the younger missionaries to stay on in their assignments. One Witness who had served as a missionary in Italy reported that she has been privileged to help 115 persons to learn God's truth. Following such encouraging remarks the missionaries went into the Bethel dining room for a fine meal.

At the New York assembly were many other full-time proclaimers of the good news. From Guadeloupe was a Witness who for twelve years has been a special pioneer, devoting 150 hours a month to preaching the "good news." From the British Isles came an eighty-five-year-old pioneer who has been a Witness for forty years and a pioneer for seven. He expressed hope to return to London in time for the assembly there at Wembley Stadium. A missionary

from Argentina related that 180 delegates had come to the assembly from that land; and about half of them were full-time preachers!

Among the 700 Swedish delegates present was seventy-six-year-old Johan En-eroth, the Watch Tower Society's branch servant in Sweden and fifty-one years a Witness, forty-nine of them as a full-time worker. A Swedish first lieutenant before learning God's truth, he has since served in both Denmark and Sweden as a soldier for Jesus Christ.

Present at the Japanese meeting were many special pioneers. Talking to these enthusiastic Christian sisters attired in their native dress was a pleasure. For instance, a special pioneer, Sister Nishigari, related that she went to a town where there were no Witnesses and formed a congregation there, and now she is here for the next class of Gilead School. Also present from Japan were the Arai family: Chie Arai, who is working in the Society's Tokyo branch office; and her sister Hisako, ten years a pioneer and now a special pioneer who has helped form two congregations. Their mother is also a pioneer.

During the New York assembly telegrams and messages came in from all parts of the world. Why? Because of the keen interest of Jehovah's witnesses every-

Witnesses in Creole dress at the French-language assembly

where in this assembly and their love for their Christian brothers. Here are a few examples:

"44,653 of your brothers in Zambia rejoice to send you their warm Christian love." "Greetings and love to you all at the 'Peace on Earth' spiritual feast in New York from 9,811 Korean brothers." "All Japanese Bethel workers supported by over 7,000 publishers send love and Christian greetings to all assembled peace-loving Witnesses from many lands." "From the Equator alongside the slow-moving River Nile we send you our warm loving greetings—Uganda, Africa." "United with all of you we wish Jehovah's rich

blessings. Your brothers of the congregations in: Thessalonica, Berea, Philippi, Athens, Corinth and scores of other congregations in Macedonia and Achaia, Greece."

New York's "Peace on Earth" International Assembly came to a close with thrilling remarks by N. H. Knorr concerning plans for further expansion of the urgent work of taking the Word of life to people in all lands, and then prayer to Jehovah, the God who gives peace. How privileged were those who attended this grand spiritual feast, an international assembly to which delegates had come from over a hundred lands!

Mammals in Motion

MAMMALS, from the aardvark to the zebra, are marvels in motion. They may leap with their legs, cling and climb with claws, negotiate rough terrain with hoof or nonskid heel, or simply pad along on their paws. Each moves about in a style suited to its peculiar environment. Most of the mammalian species, creatures that nourish their young with milk, are land creatures.

But have you ever given particular attention to how each one moves about? Something common to them all is that they simply push backwards against the surface; the forward force available for movement is exactly equal to that force exerted by the animal in pushing backwards. By use of this power, located in the extremities, mammals in motion dis-

play a great deal of beauty and grace. The more we study these creatures, the

more we are impressed by the practicalness of their individual gifts. Let us take a closer look at some of them, and concentrate especially on the organs of locomotion—the feet and the legs.

A visit to a zoo has doubtless already impressed you with the astonishing physical variety encountered in the mammal world. But aside from color and size, shape of head and so on, have you noted their feet? Probably the most representative foot is the hoof. The horse has a full hoof, the pig has a cloven hoof, and the camel's hoof is partial. Suppose we choose one of these and consider the value of its foot in

relation to its ordinary environment and activities.

"Ship of the Desert"

The camel is a hardy creature that can bear up under extreme privation. Heat and cold, thirst and hunger that would kill most animals, the camel takes in its stride. Its extra built-in food and water supply permits it to travel nonstop at a uniform pace, never hurrying nor lagging behind, from daybreak till dark. It can actually be pushed to travel to the point of death with a burden of 500 pounds on its back. For any animal to hold up under such punishment for lengthy periods, it must have remarkable feet and legs.

Rather than saying that the camel walks, we might say that he paces. The long front and rear legs on the same side of the body move forward in unison. This produces the rolling effect that may have given rise to the name "ship of the desert." The feet of this "swaying ship" are made up of two toes protected by large, heavy cushioned soles and naillike hooves. The thick, tough cushion provides traction on sand or rock. Large calluses on the leg joints and chest protect these parts from abrasion while the camel is kneeling or lying down.

With all these aids to desert survival, is there any wonder that the camel has been a valuable burden bearer throughout the centuries?

pearance. Elephants travel in herds, shuffling along at about seven miles per hour.

In an emergency they can double this speed, yes, even triple it for attack.

An enraged elephant will charge up to fifty yards, raising his mighty ears menacingly, and throwing

the feet forward and outward in a most distinctive manner.

The enormous weight of this animal is supported by massive, columnlike legs that appear to be shapeless and clumsy. But surely it takes this type of leg to support the vast seven-ton body. Because of his massive weight the elephant is incapable of the slightest spring, and could not cross a seven-foot ditch even if it attained the maximum stride of six and a half feet. The sole of the foot is covered with a soft, elastic horny layer as if of crepe rubber, with the additional advantage of a non-skid tread. All that appears of the skeletal toes are the broad nails.

Since the African elephant attains a height of thirteen feet, we might expect him to be rather awkward. Despite the ponderous build, though, he can move through the bush almost as silently as any other wild creature. He moves with astonishingly little noise and is master of the art of concealment. His surefootedness, even on rough terrain, must be credited to his feet and legs.

Paws and Claws

Cats, all the way from the tabby to the tiger, in daily life present an amazing contrast of moods. At rest, as they purr contentedly, they are the picture of peace and relaxation. But when attacked or hunting for food they can explode into

The Mighty Pachyderm

The largest living land mammal is the elephant. This thick-skinned creature—for that is what "pachyderm" signifies—is a plant eater, despite his terrifying ap-

action. In the world of flesh eaters the cat has the sharpest claws. These cutting tools are retractable to prevent blunting through contact with the hard ground. With these safely out of the way even a big cat, a tiger or a lion, can move along quietly on padded paws, often placing his hind feet in the tracks of his forefeet with proverbial softness.

Look at the lion. His padded paws allow for stealth, not to speak of their use as instruments for freshening up his coat where the tongue cannot reach. The loose build of the rear legs makes possible a variety of movements: pushing himself along even when he slinks with belly to the ground; also springing through the air in a series of bounds at a speed up to thirty miles an hour. Then there are the powerful forepaws—with claws retracted, strong enough to stun with a blow; with claws unsheathed, capable of tearing even tough food to shreds.

The Sluggish Sloth

One of the strangest means of mammalian locomotion is that adopted by a small hairy denizen of tropical America—the sloth. Early Spanish explorers called him "the little armored thing," but the modern name derives from the Latin expression *tarpides*, meaning "slow foot." How well this describes the three-toed sloth!

No other warm-blooded creature shows such a disinclination for movement. He is so languid that green algae, which look like moss, attach to his coarse hair, adding to his camouflage as he makes

snaillike progress among the treetops. So slow his movements, he reminds one of a study in slow-motion photography.

Zoologists relate him to the anteater and the armadillo, but the sloth looks more like a cross between a monkey and a bear. He has three long, hooked, needle-sharp claws on each of his four paws. Although his legs and arms are incredibly muscular, the sloth is all but helpless on the ground and cannot even support his own weight. The solution to this paradox is that this

slow-moving creature was built for life among the treetops—an upside-down life at that. The sharp claws are for climbing, and

all his locomotion has to be in a hanging position, head down. Can you now see why his arms and legs have to be muscular?

He can even turn his head round and round until an observer is sure his neck will snap. But no, because his neck is extremely flexible. Double-jointedness makes him a veritable acrobat. Hanging by one hind leg, the sloth can turn his body through almost 360 degrees. This is, in fact, his emergency defense. In this position he can strike out at enemies with both arms, delivering blows with amazing accuracy. But sleep is mightier than the claw, and in no time he can drift off into one of his typical fifteen- to eighteen-hour naps.

Hopper Extraordinary

Take a look, now, at the marsupial family of mammals, which ranges in size from hopping mice all the way up to the largest relative, perhaps weighing two hun-

dred pounds. The generic name "Macropus" means "great foot." Yes, that huge pouched mammal, the kangaroo, comes next to our attention.

Eighteenth-century explorer Captain Cook asked an Australian aborigine the name of this great hopping creature. The reply, "I do not know," sounded to Cook like "kangaroo" and the name stuck. Cook found these creatures hopping around the open plains without any fixed home. The largest grew to a height of seven feet. It looked quite ludicrous to the captain, these creatures bouncing about, but imagine his astonishment when some of these hops lengthened to thirty feet!

The kangaroo's powerful, long hind limbs are the secret of his tremendous springboard action, while the tapered tail acts as a balancing pendulum and rudder for varying leaps and turns while traveling along at full speed. The folded legs suddenly straighten out, sending the heavy body through the air forward and upward.

So, there you have them—the camel, the elephant, the cat, the sloth, and the kangaroo, each equipped for its role in life. Surely, the Great Designer, the God of creation, is to be admired for the intricacies, for the thoughtful consideration, reflected in all his works!

Alternatives to blood transfusion

SHOULD blood transfusions be given children at the request of a physician in spite of the objection of parents? This is a knotty issue that frequently confronts American judges. Because of this the American "Council of Judges" met and formulated "Guides to the Judge in Medical Orders Affecting Children," which was published in *Crime and Delinquency*, April 1968.

This Council consists of some fifty United States judges who work with the "National Council on Crime and Delinquency." It prepares or sponsors counsel in the form of "guides" for the benefit of American judges. Among its members are some of America's foremost judges. As far as it went, the above "Guide" gave fine-counsel on this difficult and controversial subject.

For example, the Council took a dim view of the undue haste with which some judges have been influenced to act in giving legal sanction for blood transfusions. In one case an emergency was declared and a blood transfusion was ordered with-

out first having a hearing. The doctor argued that "the child might be cold in his grave" if his receiving a blood transfusion had to wait until a hearing was held. However, a whole week passed before the child was actually given a blood transfusion. Rightly the Council stated:

"By granting the order upon a doctor's certificate without a hearing, the statute, as interpreted by the Ohio court, denies the parents their right to oppose the treatment on religious and medical grounds and thus encourages arbitrary action by medical authorities. As indicated in this very case, it was possible to hold a full hearing without harming the child; the hearing should have been held."

Pinpointing the underlying principle involved, the Council went on to say: "It seems clear that 'blue babies' and accident victims may recover without blood transfusions and that large numbers of persons die or are infected with serum hepatitis from blood transfusions. Any medical decision that a particular procedure is necessary . . . must be justified to the court as proposing the *only* proper procedure in the situation. If there is a *choice* of procedures—if, for example, the doctor recommends a procedure which has an 80 percent chance of success but which the parents disapprove, and the parents have no objection to a procedure which has only a 40 percent chance of success—the doctor must take the *medically riskier* but parentally unobjectionable course."

Among those who especially appreciated this position are those who may object to blood transfusions because of the risks involved. Without a doubt there are many cases wherein a plasma volume expander would be quite effective, and without the risks accompanying blood transfusions! According to this Council, so long as such 'substitutes' have some chance of success

they should be resorted to if the parents object to the use of blood transfusions.

More than that, this Council further advises: "Local representatives of religious sects likely to be involved in litigation over medical treatment should be consulted by the court, as such sects frequently know of physicians or nonmedical practitioners willing to treat children in emergencies in ways not offensive to parental beliefs." How reasonable! How just! It allows for differences of opinion and alternatives and acknowledges that some of these may even be found among "non-medical practitioners."

Alternatives to Blood Transfusions

Anyone following the course of modern medicine cannot help noting that there is a definite trend toward using alternatives to blood transfusions. Thus Dr. B. F. Rush, Jr., a professor of surgery, wrote: "While a number of institutions and organizations use saline solutions enthusiastically, a larger number continue to depend almost wholly on blood transfusions."—*Medical Science*, May 1967, p. 62.

That this "larger number" are far behind the times is apparent from what the 1969 *World Book of Science Service* reported under the heading, "The Need of Blood," as published in the *Los Angeles Herald-Examiner*, February 16, 1969:

"A few deaths have been attributed to a lack of sufficient matching blood. But why panic? . . . We are not entirely without alternatives. . . . alternatives which may prove preferable to donated blood. Except in unusual circumstances . . . most individuals can remanufacture their own red blood cells within three days of loss. . . .

"Intravenous glucose solution has been the most universally used fluid. Surgeons researching for the U.S. Army have also successfully used normal saline solutions on hundreds of surgical cases, including open heart procedures. They have found the ster-

the solution avoids all the risks of transfusion reactions, contaminated blood, allergic reactions and serum or viral hepatitis.

"Dr. Stanley Dudrick of the U. of Pennsylvania, in order to hasten body rebuilding processes, enriches normal glucose with many nutrients and introduces it by means of a catheter through the jugular vein. And soon Robert Geyer of Harvard University may have the best answer. He has come closest to developing a true blood substitute by emulsifying the same fluorocarbons out of which teflon is made."

Bearing similar testimony is Dr. Rush, Jr., in his article, "Should Buffered Saline Solutions Be Used to Treat Hemorrhage and Hemorrhagic Shock?" He relates that some physicians are so enthusiastic about these solutions that they refer to them as "white blood," and he says that some medical units in Vietnam have made saline solutions standard routine. He also tells of a hundred operations in which part or all of the stomach was removed and in which only two received blood during the operation and that thirty-four cases of major blood loss were treated with only saline solutions.

A key finding, he states, is that saline solutions be given in quantities three to four times that of the amount of blood lost. It appears that this is so because "shock" requires the replacement of fluid not only in the blood vessels but also in the "extravascular space," for which such solutions are especially effective.

Another writer shows that in "shock" due to burns alternatives to blood transfusions are superior: "Ringer's lactate solution appears the most efficacious single agent available for the correction of shock attending burns without regard to age of patient or extent of injury." One reason for this seems to be that diluting the bloodstream with such solutions aids the flow of blood in the capillaries.—*Annals of Surgery*, October 1966.

Because of the risks associated with blood transfusions authorities have urged checking on hospitals as to the number of single-unit transfusions they give because these can do so little good but may do much harm and even kill. One doctor has asked if this should not be done in regard to multiple-unit transfusions because of the greatly increased risks these entail. After describing these risks, he stated: "No transfusion should ever be given if other therapy will suffice."—*New York State Journal of Medicine*, January 15, 1965.

Just how effective alternatives to blood transfusions can be in a variety of situations the following will clearly show.

In Anemia

Some physicians prescribe blood transfusions routinely for anemia. How ill-advised such treatment can be Dr. B. S. Leavell, Professor of Medicine and Chief of Hematology, University of Virginia, shows: "Now as for anemias due to defective blood production . . . We have some patients who did light housekeeping and got along very well till the hemoglobin got down to 2½ grams . . . It varies with the individual . . . This simply shows that in patients with intrinsic defects . . . there isn't much use of transfusing them if they are surviving . . . they have reached a pretty stable situation and this patient with sickle cell anemia . . . we transfused him up to normal level and in a few months he is back to where he was before."

He also tells of a lively young businessman who had the flu and went to the hospital. "He had a mild anemia which was not investigated but he was so anxious to get out that his physician transfused him to speed his recovery. He received an entire pint of blood despite development of chills and backache during

its administration . . . He finally died.”
—*Uses and Misuse of Blood Transfusions.*

In support of the foregoing is this experience: “In 1964, I became critically ill with anemia and was transported to the hospital. The doctor said that only a blood transfusion could save me. . . . When I declined this treatment . . . he began giving other treatment and marked on my card: ‘He has refused blood transfusions.’ The same day I arrived in the hospital, a man in my room died. He had had a blood transfusion a month before. A week later another man in the room was given a blood transfusion for the same sickness I had. . . . However, shortly after this the man . . . suddenly died, whereas I became well.”—1969 *Yearbook of Jehovah's Witnesses.*

Brain Surgery Without Blood

Among the most serious operations are those that involve the brain. Yet here, too, certain neurosurgeons have been willing to forgo the use of blood out of respect for the religious scruples of their patients. One such was Dr. J. Posnikoff. Writing in *California Medicine*, February 1967, he told of the “Cure of Intracranial Aneurysm Without Use of Blood Transfusion.” After presenting the extent of the problem (it was a large aneurysm) and describing in detail how he dealt with it by means of the two-stage technique, he observes:

“It is the current opinion of most neurosurgeons that transfusion of blood is absolutely essential in operations for intracranial aneurysms. This case demonstrates, however, that each aneurysm should be considered individually. *It therefore behooves us not to routinely deny major operation to those who may be in desperate need but who cannot morally accept blood transfusion.*” (Italics added.)

Another California neurosurgeon tells of performing a craniotomy on a nine-

year-old child without using any blood. In Philadelphia a neurosurgeon consented to remove a brain tumor without use of blood, although he had previously never performed this operation without using five to six pints of blood. Not only was this operation an unqualified success but the recovery was so fast that it amazed the entire hospital staff. When asked if he would do it again, the neurosurgeon replied: “Yes, I would be very glad to do so,” and he has, since, done so.

Last February in Brooklyn, New York, a two-year-old boy's head was pierced by a part of a metal toy that went in an inch and which his parents were unable to remove. One hospital after another wanted to operate but refused to do so without blood. Finally one of New York city's leading neurosurgeons, Dr. Matthews, was consulted, and he agreed to handle the case. In a matter of minutes he was able to extract the obstacle without even resorting to operation.

Heart Surgery

Among the great strides that modern surgery has made is in open-heart operations. And here again we find some right up in front in performing them without blood transfusions while others still insist on the need of blood. Thus Dr. Denton A. Cooley states that use of a 5 percent glucose solution has been standard procedure at his hospital since 1962. Yet as late as 1967 a patient with scruples against using blood was denied open-heart surgery in Atlanta, Georgia, necessitating his flying to Houston, Texas, where open-heart surgery was performed without using any blood.

Another case was that of a boy named Gino, in the Bahamas. He had a heart murmur requiring surgery. The surgeon requested to use blood in case of an emergency, ‘for the lad could die any time.’

The mother remained firm, however, and so the operation was performed without blood. She reports: "Of the three heart patients' operations that day, Gino's was the most serious, yet he was the first one they could move. The doctors would come as many as seven at a time and would marvel at his quick recovery."

Greg, a three-year-old lad living in the state of Washington, was suffering from a serious heart defect. In view of the parents' objection to blood the medical team agreed to operate without blood, but not without first warning of the risk this involved. The operation was a success, even though during the operation it was discovered that the defect was even more serious than had first been thought.

In Gibraltar a woman who had been studying the Bible with one of Jehovah's witnesses was told she needed a heart operation because of an obstructed valve. However, at the hospital the surgeon, upon learning of her scruples against blood, became so angry he sent her home. But the next day it so happened that a heart specialist from London visited the hospital and, hearing of the case, asked the woman to return. After examining her he said he would gladly operate without blood, much to the chagrin and embarrassment of the local surgeon who had refused to do so. The operation was successful in every way.

In Accidents

Serious accidents present a particular challenge to surgeons as they often involve much loss of blood and represent real emergencies. But even in such cases alternatives have proved effective time and again. Thus a California father while at work fell through a hole in a roof and twenty feet on to a cement floor. Rushed to the hospital, he was found to have fractured ribs, left arm and wrist and pelvic

bone, as well as sustaining a brain concussion. Slipping into a coma, he kept muttering in Spanish, "Give me glucose. Give me glucose." After five days he came out of the coma, at which time the doctors wanted to remove his spleen because of the danger of its rupturing because of his continued hemorrhaging. But they would not do so without a blood transfusion, to which neither he nor his wife would assent.

Then, as his wife tells it: "I told the doctors that if they refused to do all they could to save him without blood they would be his murderers. They answered that it was I who would be guilty. What else besides giving blood could they do? I quickly retorted: 'Why haven't you given him vitamin B complex, iron and liver shots? Give him vitamin K to help coagulate his blood. How can his body build blood as fast or faster than he is losing it without nourishment?' The doctor answered that he is not a bleeder and that vitamin K could be dangerous. I explained that I know that, but he is evidently unable to stop bleeding now and a little might help. He wanted to know how I knew so much about these things, and I explained that that was what they had done for me years ago when I was rushed to the hospital hemorrhaging." While a week later this father faced another crisis, he fully recovered and that without any blood.

In another case a six-year-old boy in New York State was riding his bicycle when he was run over by an auto. He suffered from skull fracture, broken left arm and leg and severe internal injuries including rupture of his intestines and his spleen. Still the surgeons successfully operated without using any blood. But when complications set in the next day and the boy's heartbeat went up to 216 a minute, the doctors insisted on blood and threatened a court order. However, they were

talked out of it and employed dextran. Within two hours his heartbeat began to slow down and in five days it was normal. Recovery was fast and the lad shortly went back to school, normal in every way.

Late in 1968 a young woman had such a serious accident that the doctors held out little hope for her. However, she fully recovered without the use of blood. While she was recovering, her nurse told her she had had a similar accident and had been given blood and that she had never gotten over the effects of the blood transfusion!

In Childbirth Cases

That there are alternatives to blood transfusions in childbirth cases has also been demonstrated time and again. One such case was reported in the Tulsa, Oklahoma, *Daily World*, August 6, 1967, under the heading "Tulsan Living Refutation of Transfusions." It told of a mother who had previously given birth to seven children with no more than average discomfort. But with the delivery of her eighth child, a four-pound eleven-ounce daughter, trouble developed, severe hemorrhaging set in. Doctors and nurses tried in vain to stanch the flow of blood. The report said:

"The attending physician reached a decision: the only way to stop the bleeding was by surgery, but an operation was impossible in the face of such blood loss. The patient must have a blood transfusion. A member of Jehovah's witnesses, [she] refused the suggested treatment because it was against her religious belief." When she kept refusing, he told her: "I firmly believe there is no hope; I do not see how you can live through the night." But both

wife and husband remained firm. "As the night wore on, the hemorrhaging diminished. The doctor was able to keep her veins from collapsing by transfusions of glucose and other fluid expanders."

She "survived the night, but the count of hemoglobin . . . stood at 2.4 grams per

100 milliliters of blood. It should have been 16. Her hematocrit (relative amounts of plasma and corpuscles in the blood) was down to 7. It should have been

40. Doctors, amazed that she had survived the night, still recommended blood transfusions in view of the tremendous loss of blood. She continued steadfastly to refuse. The day passed . . . On the third day her blood count slowly began to climb. When she was released from the hospital, four weeks to the day from the time she entered, her blood count stood at 10.2 and was steadily improving." Two weeks later she "was moving normally around the house, caring for her family."

A mother in Kentucky who had a similar experience, but with her first child, tells of it in the following words: "In April 1968 I went to the hospital to have my first baby. An infection developed and I hemorrhaged three times in eight days after the child was born, making it necessary to remove my womb. My blood count was down to 3 when the operation was performed. When I woke the next morning I was told by a doctor whom I did not know that my blood count was down to 2.3 and that I would die unless I received blood transfusions. However, my own doctors worked hard to save my life and in seven days my blood count rose to 7. In another week it was up to 9.8 and I went home. Five weeks after the opera-

tion it was up to 11, and since is at 11.5, higher than it has been for years."

Alternatives to Exchange Transfusions

Many doctors take for granted that a newly born infant suffering from jaundice needs to have its blood exchanged, but here again there are those who point to alternatives, at least in many cases. Thus Dr. P. M. Dunn, writing in *The Journal of Pediatrics*, discusses "The Unnecessary Exchange Transfusion." He relates that "at least half" of Rh-factor babies of a certain study did not require any exchange transfusions, and told that the risks accompanying such transfusions are greater than is generally appreciated.

Medical World News, February 17, 1967, reported that "Charcoal Each Day Keeps Jaundice Away." A New Jersey pediatrician is "feeding charcoal to . . . clear the jaundice and eliminate the need for full exchange transfusions." By this method he has been able to cut down the exchange transfusions by more than 90 percent. And says he: "We've had no toxicity and no trouble from the charcoal." In many hospitals the death rate from exchange blood transfusions is as high as 5 percent. In this hospital it is 1 percent.

Sixteen years ago three Rh-factor babies were born in Reading, Pennsylvania, about the same week, two boys and a girl. The two boys were given blood exchanges and both died in a matter of days. The girl was not given any because of her parents' objection to blood transfusions. They were warned she would either die or grow up mentally retarded. Within the

past year this girl was on the National Junior Honor Society for outstanding scholarly achievement. Obviously the doctor was mistaken in more than one respect.

More examples could be given showing that there are indeed alternatives to blood transfusions and that these deserve the notice of judges handling such cases. That the counsel of the Council of Judges is indeed wise can be seen from the following experience:

In January 1968 a three-year-old girl suddenly came down with high fever and went into convulsions. When she was rushed to the hospital, the surgeon said that it could well be due to a malignant tumor and that in such an operation if an emergency arose he would resort to blood, and suggested a hearing before the judge. When the matter was explained to the judge, that there likely was a surgeon who would operate without blood, he granted time to explore this possibility. Such a surgeon was located. But because of interference by an anesthesiologist, it was necessary to take the child to a third hospital, where the surgeon, the Chief of Staff, stated: "Yes, I am willing to risk the operation without blood." The operation, which lasted two hours, was wholly successful without recourse to blood; in fact, only a few drops of blood were lost.

Truly it can be said that the words of the ancient wise man, "The one listening to counsel is wise," apply to the judge who heeds the counsel of the Council of Judges in the matter of alternatives to blood transfusions.—Prov. 12:15.

Pumping the Oceans

- There is a tremendous water pump daily lifting from the oceans huge quantities of water. If the oceans were not refilled, in a year the level would drop thirty-nine inches. The "pump" is the sun, which annually evaporates or pumps out of the oceans over 83,700 cubic miles of water.

By "Awake!" correspondent in Rhodesia

IN THE heart of the great Rhodesian veld, not far to the southeast of Fort Victoria, the traveler will come across the remains of a great fortress town, its ruins scattered over a wide area. Most amazing is the complex of vast structures that occupy the center of the area, many of which still stand. Who built them? Why, in a land usually associated with huts, were they needed? And when did all this take place? These are the questions that go through one's mind as one stands amid these ancient ruins and views the distant circle of misty-blue mountains.

Zimbabwe—for that is the name of these ruins—has been an enigma for a long time. Ancient voyagers had reported its existence several centuries ago—at the time linking the location with the land of Ophir from which Solomon obtained his supplies of gold. Then, for a long time, Zimbabwe was lost

again. Nobody knew its location. Many doubted its existence. But in 1868 a hunter of ivory stumbled upon the site. Imagine his bewilderment at finding these evidences of an ancient city in the midst of the bush! It must have been like a dream.

Not much bush is left here now. In fact, there are facilities for tourists and every opportunity to examine the area at leisure. Would you not like to do just that? We can preface the tour with the information that Zimbabwe, pronounced Zim-ba'-bwe, is thought to have the meaning "the house of the chief."

Wonder After Wonder

First as we approach the Great Enclosure or Temple we are faced with a wall so tall that it resembles a sheer rock cliff. It is about thirty-one feet high, fifteen feet thick at the base and tapering to around ten feet at the summit, and completely encircles the Enclosure. As we go closer, we note that it is constructed of granite stone, so cut and shaped as to render mortar unnecessary. In single file we go through one of the narrow entrances to the interior, and literally gasp to see the extensive ruins, thinly disguising a system of enclosures, platforms, passages and columns.

At this point we are in what is called the Platform Enclosure, and we can soon see the remains of the raised platform from which it takes its name. Crossing the enclosure toward the platform, we gain entrance into a roughly triangular area behind it, known as the Sacred Enclosure. There in the middle stands a solid stone cone with a flat top, seventeen feet in diameter at the base and tapered masterfully. Nearby stands a second smaller truncated cone. It has been suggested that these together rep-

resent the male and female symbols of phallic worship.

As the Sacred Enclosure narrows toward the northeast we next enter a long, narrow passageway, over 200 feet long, and at places only wide enough for single-file progress. Looking up at the blue sky framed as in a narrow slot between these towering walls, one cannot but wonder who were the builders. The question also occurs, Did ancient priests once use this private passageway leading from the Sacred Enclosure to the north entrance of the Temple Enclosure?

Back into the open again, outside the towering outer wall, and we pause to admire the interesting chevron pattern that runs along the wall near its summit. A bus now takes us over to yet another feature of Zimbabwe, The Acropolis, a steep hill up the sides of which we can observe sections of stone wall clinging to the face some 250 feet above us. We start up and before long find that steps cut into the hillside make the going easier. But these get narrower and steeper as we proceed. How thoughtful of the park management to furnish these rest benches!

On we go up and up, the ascent getting steeper and steeper, until we come to what looks like a crack in the rock face. It turns out to be a narrow passage between two giant boulders, just wide enough to squeeze through—and suddenly we are there. Yes, we have emerged from the cramped passageway onto a flat-topped plateau, with a marvelous view of the countryside for miles around. Inward toward the center of the hill, stone walls again rise up before us, twenty-five feet high. There is a small covered-in gateway, so low we must stoop to go through, and here we are in the midst of what remains of this hill fortress. The nagging question still is, Who built it?

Here are split-level floors, stone dividing walls, winding passages, and, to our

left, a fenced-off area. Many evidences there are of alterations and inferior reconstructions. It is clear that more than one people has lived here. At the end of one long passage we emerge into the Western Enclosure. Here is a grand view of the valley below and the entire Temple Enclosure we visited earlier. Steep steps descend from here. But we will move over to the Eastern Enclosure, for it is said that this was the focal point of all the religious ceremonies of the ancient inhabitants of Zimbabwe.

Speculations

Among those who have investigated Zimbabwe there is wide divergence of opinion as to its age and use, so much so that the whole thing is still a riddle. There are those who claim that the whole complex is no more than 500-800 years old, and that it was built by a people native to Central Africa. Others, we have seen, propose a much more ancient history, linking it with Solomon and even the Phoenicians. They point to the similarity of these constructions to those of the Carthaginians. They claim that no primitive tribe could have devised the method of heating the granite rocks, pouring cold water on them so that they might crack into thin slabs from which the stones of this fortress city are built.

Proponents of the "ancient" theory point to the evidences that the original builders must have been familiar with military and defensive engineering. How else could all of the massive ramparts, traverses, screen walls, intricate passageways and hidden entrances, sunken thoroughfares and parapets have been devised? The fact that the surrounding area was and still is gold-mining country is most suggestive. Hoards of mined gold and the readying of shipments to the coast

would certainly require protection in a stronghold such as Zimbabwe.

In earlier times the finding of curious birds carved in soapstone in the ruins of The Acropolis gave color to the idea that the sacred hawk of Egypt, also utilized by star and sun worshipers of the East, was revered by Zimbabwe's builders. A considerable number of phalli were also discovered among these ruins. Certainly there were indications here of something quite different from the crude nature worship of Central Africa's tribes. Still, the whole question baffles investigators.

Old crucibles for melting gold have been found among these ruins. Modern miners in the area report having found crude implements in the old mine shafts, and believe that those early miners, for lack of pumping equipment, simply had to abandon mines whenever flooding occurred.

Not to be overlooked is the possibility that in earlier times a number of men from a more advanced civilization came into this area and managed, for a time, to hold sway over some local tribes, putting them to work to build up this fortress and its surrounding habitations as a safe center for the accumulation of gold and its export.

Reverting again to the interesting chevron pattern that fringes the top of the eastern wall of the Temple Enclosure—it is notable that it extends for only some 265 feet, or that part of the wall receiving the rays of the rising sun during the summer solstice. A coincidence? At least, it is well known in archaeological circles that

the chevron pattern occurs frequently—on Egyptian monuments, on Phoenician coins, as well as among many present-day African peoples. It is known to be a hieroglyph for water, and a symbol of fertility.

That Zimbabwe was once a thriving and populous center is noted from the fact that old stone ruins are to be encountered not alone throughout the entire valley but also within a radius of several miles. Whether these represent outposts of the main fortress or living quarters for the garrison or for miners is now difficult to determine. A completely satisfactory solution to the whole question continues to elude us.

A Place of Quiet Meditation

In these days of bustle and hurry, here is a spot for quiet meditation. Atop The Acropolis the only sound to be heard is the slight swish of the wind in the trees overhead. There is no one to interrupt as one gazes out over the veld, broken here and there by a granite kopje or hill. Mimosa, acacia, wisteria—all have their representatives here. And wild flowers abound.

But now, the sun is setting rapidly. In this latitude darkness comes suddenly. It is time to take our leave, heading back the way we came to Fort Victoria. But not quickly will we forget this strange site, with its numerous baffling clues, its immensity, the quiet and peace that now enshroud it. If the stones could talk, what a story they might tell us! But we must take our leave of Zimbabwe, the riddle of Rhodesia.

Blinking

● The process of closing our eyelids and opening them is blinking. What useful function does this serve? It protects the eyes from injury; it wipes the surface of the eyes clean; it helps regulate the amount of light that comes into the eyes; and it keeps fluid over the front of the eyes. How often do we blink? Most people blink on an average of about twenty-five times a minute.

WOULD it not be strange for someone wicked to provide a ransom for a righteous person? Surely evil-minded, selfish men would hardly consider it worth while to help others voluntarily without also benefiting themselves. It is therefore contrary to their wishes that the words of Proverbs 21:18 are fulfilled upon them: "The wicked is a ransom for the righteous one; and the one dealing treacherously takes the place of the upright ones." But how does this happen?

Generally speaking, those desirous of furthering their selfish interests, regardless of the harm done to their fellowman, would never of their own accord submit to an arrangement that would mean loss to themselves and gain for others. Deliverance for the righteous can therefore come only at the expense of those who would directly or indirectly injure or destroy them. There has to be a reversal of matters, with the righteous person being preserved at the cost of the life of the wicked one.

A number of Bible examples illustrate how this has occurred in the past. For instance, in the time of the Medo-Persian Empire, high officials and satraps plotted against the prophet Daniel due to his having a very prominent governmental position. They succeeded in having King Darius sign an interdict that decreed death in the lions' pit for persons petitioning any god or man, other than the king himself,

for thirty days. But Daniel continued worshipping his God, Jehovah, petitioning him three times a day as had been his practice before the law was signed. Although thrown into the lions' pit for transgressing this unjust decree, Daniel was delivered by an angel from certain death. Then came the reversal. King Darius ordered that the wicked schemers themselves be thrown into the lions' pit. Their death ransomed or delivered Daniel from all possible future harm that they undoubtedly would have perpetrated against him.—Dan. 6:1-24.

Similarly, at a later period, the lives of all the Jews were endangered. An Agagite named Haman was exalted to the position of prime minister during the reign of Persian King Ahasuerus (considered to be Xerxes I). Angered by the Jew Mordecai's refusal to bow down to him, Haman sought the death of Mordecai and of all the other Jews in the empire. He misrepresented them to Ahasuerus as undesirable lawbreakers and then added: "If to the king it does seem good, let there be a writing that they be destroyed; and ten thousand silver talents [about \$14,235,900 in modern values] I shall pay into the hands of those doing the work by bringing it into the king's treasury." Thereafter Ahasuerus empowered Haman to issue a decree for the annihilation of all the Jews, "young man as well as old man, little ones and women."—Esther 3:1-13.

But soon the tables were turned on the plotter. Queen Esther, who was also Mordecai's cousin, appealed to her husband Ahasuerus for her life and that of her people, and identified Haman as the originator of the murderous plot against them. The enraged king commanded that Haman be hanged on the very stake he had made for hanging Mordecai. The prime ministership was then given to Mordecai, and he and Esther later received royal authorization to draw up a counterdecree for the

Jews to defend themselves against their enemies at the time the law for their extermination went into effect on Adar 13. When that day arrived the Jews stood for their lives and slaughtered those seeking their injury.—Esther 7:3-9:2.

Although Daniel and, later, Mordecai and the other Jews experienced an almost immediate ransoming or deliverance at the expense of their enemies, this is not always the case. During the nearly six thousand years of human history, wicked men have killed many righteous persons. Christ Jesus even said concerning his followers: "People will deliver you up to tribulation and will kill you, and you will be objects of hatred by all the nations on account of my name."—Matt. 24:9.

But does the fact that God allows the righteous to suffer entitle them to rise up in revolt, forcing their oppressors to become a ransom for them? No. Even in the case of Daniel and that of Mordecai and his fellow Jews, deliverance came by legal means. They did not become a law to themselves.

Similarly, true Christians today subject themselves to the governments ruling over them and appeal to these for relief from injustices. Since such governments exist by God's permission, they rightly exercise authority to punish lawbreakers and can, as did Darius and Ahasuerus, deliver law-abiding persons at the expense of lawless ones.—Rom. 13:1-4.

Illustrating this is the experience recently had by Jehovah's witnesses in one area of Cameroun (Africa). Local officials there arrested eleven of their number and tried to force them to sign statements renouncing their religion. About four weeks later one of Jehovah's witnesses was murdered. After governmental investigation, much to the surprise of the populace, the local *deputé* (a member of

the legislative assembly) was arrested and taken to prison. Other important officials were also arrested. At the trial the *deputé* confessed the murder and was subsequently sentenced to death. But before the scheduled execution he committed suicide in his prison cell. Others involved in the case received long prison sentences. On the other hand, those of Jehovah's witnesses who had been unjustly imprisoned were released and encouraged to continue their preaching activity.

However, even when the governmental authority refuses to render justice and becomes a persecutor of God's faithful servants, this gives the Christian no basis for taking matters into his own hands. A very good reason for this is the fact that Christians cannot determine whether any opposer, even the worst persecutor, will remain such. One of the most zealous first-century Christians, the apostle Paul, said of his former course of life: "I was a blasphemer and a persecutor and an insolent man." (1 Tim. 1:13) And today many onetime persecutors are now faithfully serving Jehovah God. Therefore, were Christians to retaliate in kind, they could actually harm persons who otherwise might have changed their ways and, like Paul, contributed much to the advancement of true worship.

So, when enduring persecution and other abuses at the hands of men, true Christians appreciate that God's merciful forbearance is giving more persons the opportunity to abandon their wicked ways. (2 Pet. 3:9) Patiently they wait upon Jehovah God to take action against the willful transgressors of his righteous laws. Thus at the cost of the lives of the wicked, God's faithful servants will forever be ransomed or delivered from tribulation at their hands.—2 Thess. 1:6-9.

A Declaration for Peace

◆ The first three of twenty-five "Peace on Earth" International Assemblies of Jehovah's Witnesses came to a dramatic close on July 13 when 234,546 persons heard the talk "The Approaching Peace of a Thousand Years." In New York city at Yankee Stadium, the largest of the three assemblies, 122,011 persons filled the grandstand, the bleachers, the playing field and the tents outside to hear the talk in three languages. The other two assemblies were held at Atlanta, Georgia, and Buffalo, New York. Almost equally as dramatic was the previous day when 197,533 persons in the three cities declared themselves for peace. "Peace with the Creator of heaven and earth, by means of his long-promised kingdom of his Messiah—this is what we hold to be the key to an enduring peace for all the world of mankind," said President Knorr. "When we keep our peace with God, we can never be at war with our neighbors who are fellow creatures of God; peace with God and peace with our fellowman go together." The 197,533 persons endorsed the Declaration as one man with a resounding "I do!" A total of 5,576 persons were immersed at the three assemblies in symbol of their dedication to do Jehovah's will. The week-long assemblies

were a source of spiritual refreshment, leaving the Witnesses with a sense of urgency and renewed determination to remain faithful to God, declaring the kingdom of God as the only hope for mankind.

Churchmen Back Violence

◆ The World Council of Churches has been urged to support violence to overthrow political and economic tyranny. The 234 member churches proposed "that all else failing, the church and churches support resistance movements, including revolutions, which are aimed at elimination of political or economic tyranny which makes racism possible." The consultative body included about 70 churchmen, black power advocates, sociologists and conservative thinkers from six continents.

Costly Race into Space

◆ The United States officially launched its all-out moon program on May 25, 1961. The goal was to beat Russia to the moon in a decade. The cost was high. A staggering \$24,000,000,000 went into the Apollo program alone. It adds up to \$472 for every American family. Almost 500,000 persons were required, in all 50 states. It also required the combined resources of 20,000 American business firms. Yet, American technology has not gone to

work on its big cities to do as good a job on its slums.

More Than a Mechanism

◆ That one's heart involves more than merely a mechanism for pumping blood is indicated by some of the results of human heart transplants. Commenting on this, the Panama City *Star and Herald* drew attention to observations made by a member of the heart-transplant team at Stanford University, saying: "A psychiatrist, Dr. Lunde says that five of the 13 people who received heart transplants at Stanford last year developed severe post-operative psychosis [profound disorganization of mind, personality or behavior]. There were also less dramatic effects, such as change in self-image. One 42-year-old man decided he had become 20—the age of his heart donor." The editorial went on to say: "Since medical science began to flourish in the last century, mankind has become increasingly convinced that the human body is just a mechanism. The idea of slipping in new spare parts to keep the mechanism operating is a result of this simplistic conception. . . . If all men understood how miraculous is the human body they take for granted, perhaps man would have more respect for himself and for other human beings."

Illegitimacy

◆ More illegitimate children are being born in New Zealand and the rate of increase is higher than in many other countries. A report says the illegitimate births formed 12.7 percent of total births in New Zealand in 1967, compared with only 8 percent five years before. Comparable figures given for other countries were: Canada, 4.8 to 7.6 percent; Britain, 6.6 to 8.4; United States, 5.9 to 8.4, and Australia, 5.4 to 7.7. Sweden showed an increase from 12.4 to 14.6 percent.

Niagara Falls Shut-off

◆ Drilling and testing operations began on the American Falls at Niagara during the last week of June. Geologists and engineers are seeking ways to lessen the pace of erosion and to remove broken rocks from the base. A temporary dam has diverted the flow of 4,500,000 gallons of water a minute to the much larger Horseshoe Falls. Major slides in 1931 and 1954 have left more than 260,000 tons of broken rock beneath the falls. The falls are to remain waterless until December 1.

The Pope Is No Peter

◆ The Roman Catholic Primate of Belgium, Leon-Joseph Cardinal Suenens, stated that "the institution of the Papacy today needs credibility, and the first step to achieve it would be for the Pope to be elected by representatives of the universal church—not only cardinals and bishops, for I would gladly see the laity adequately included among the electors." "The Pope today does not give the general impression of being Peter's successor," he said, "but rather the successor of Emperors and political sovereigns."

Convents Imperiled

◆ The number of Roman Catholic girls entering convents in America has fallen off at an alarming rate during the past few years. One of the larger communities of nuns, the Sisters of the Immaculate Heart of Mary, reported the number of novices has dropped from 61 in 1966 to six in 1968. At another large order there were 114 novices entering the convent in 1965 compared to only 35 in 1968. A former nun said the decline is due to the church changing too slowly, stating: "I felt I couldn't wait 20 more years for the church to change." A Catholic journalist said that if the drop-off continues at present rates, it could threaten the very structure of orders

of sisters. Nationally, the number of Roman Catholic sisters has declined steadily since 1965, from 181,421 nuns to 167,167 in 1968.

Noise Can Make You Sick

◆ Noise can make you sick both physically and mentally. Experiments have shown that unwanted sound can cause a variety of ills ranging from ulcers to hives. The fact that noise can cause hearing loss has been known for a long time. Noise has a definite detrimental effect on the mind. Listening to rock 'n' roll music raises the blood pressure so high that it is dangerous to elderly persons. Noise that interferes with sleep is a threat both physically and mentally. It lessens the body's resistance to disease and physical stress. A person who is not permitted to dream, even for only a short time, may develop psychoses, hallucinations, suicidal and homicidal impulses and nightmarish memories, according to Dr. Julius Buchwald of the State University of New York's Downstate Medical Center.

Commercial "Pilgrimages"

◆ A concerned Roman Catholic layman says that the piety of millions of American Catholics is being exploited cynically by hard-sell advertising. Bruce Hutchinson of California said that he was perturbed especially about what he calls "the Pilgrimages" and "Catholic tours" that are extensively advertised in Catholic publications. The ads that promote them, he says, are "profoundly hypocritical" because "they are in fact selling a secular product, a vacation trip, by presenting it to us as a religious act, a pilgrimage." Each pilgrimage generally has a "spiritual director," usually a priest who gets the trip free. The idea of having a priest along suggests somehow an aura of holiness to the entire trip. "It is deceiving and exploiting us, stamping a secular pursuit

with the seal of the church and persuading countless good Catholics that their trip to Fatima or Glacier National Park is a response to Christ's call for penance," he says.

Skyscraper for Paris

◆ Until recently, Paris buildings were limited to 12 stories. But starting in September, a 58-story building is to be constructed on the site of the former Montparnasse railway station. At 656 feet, it will be Europe's tallest office building—second only in Paris to the 984-foot Eiffel Tower.

Flying Ships

◆ The Seaspeed and the Hoverlloyd are crossing the English Channel with speeds up to 90 miles per hour. The two hovercrafts make more than 20 trips daily. The journey from Dover to Boulogne takes about 35 minutes. The hovercrafts now in use carry 254 passengers and 30 cars. During the peak vacation month of August, the schedule is to be stepped up to 50 crossings a day. The hovercraft has cut by almost two-thirds the time taken to cross the Channel by ferry.

Advantage or Disadvantage

◆ Parents may not be obligated to provide their offspring with a secure future, states Dr. S. E. Rosenberg of Canada, "but they are surely obliged to give them a secure foundation on which to build their future." He then quotes the words of Dorothy Law: "If a child lives with criticism—he learns to condemn; if a child lives with hostility—he learns to fight; if a child lives with fear—he learns to be apprehensive; if a child lives with pity—he learns to be sorry for himself; if a child lives with ridicule—he learns to be shy; if a child lives with jealousy—he learns to feel guilty; if a child lives with tolerance—he learns to be patient; if a child

lives with encouragement—he learns to be confident; if a child lives with praise—he learns to be appreciative; if a child lives with acceptance—he learns to love; if a child lives with recognition—he learns it is good to have a goal; if a child lives with honesty—he learns what truth is; if a child lives with security—he learns to have faith in himself and others.” The Bible says: “Train up a boy according to the way for him; even when he grows old he will not turn aside from it.”—Prov. 22:6.

2,700-Percent Rise in Cost

◆ If Americans are wondering why they are paying such high taxes, perhaps a quick glance at the rising costs of military hardware might provide some explanation. A Pentagon official testified on June 11 that the Minuteman 2 missile was

expected to cost almost \$4,000,000,000 more than was originally estimated and that the price of a rescue submarine had increased 2,700 percent. Many a taxpayer wonders why there appear to be growing sums for weapons of death and destruction, but relatively little to combat poverty and disease.

Employee Drug Abuse

◆ There are published reports that say three out of every four companies with 50 or more employees may have a drug-abuse problem, according to Frank E. Bird, director of corporate safety and security for Insurance Co. of North America. Bird said that younger employees, between the ages of 20 and 30, present the greatest drug problems. He cited a report that said 60 percent of all American soldiers with Asiatic service use

drugs. Some insurance companies may require a special pre-employment physical examination to determine whether or not those who have served in the war in Vietnam use drugs.

Shoplifting Losses

◆ Last year, 1968, stores registered record losses, estimated to be as much as \$10,000,000,000. This does not include losses from fraud, systematic theft, burglary and armed robbery. These losses come from two sources: pilfering (defined as employee theft) and shoplifting. Most shoplifting is done by amateurs—mainly teenagers. More and more store operators realize that tough action must be taken. When shoplifters are now apprehended, a greater number are arrested and charged despite their age.

What Does Your Future Hold?

No man can say for certain what tomorrow will bring. But we *can* know without question what God will do because he has revealed in his Word, the Bible, what his purpose is toward mankind and what the future holds for this present generation. You have a place in that purpose, but whether it will be for your good or your bad depends upon you. Learn what God requires of us and what your future *can* hold for you. The *Watchtower* magazine is published to help you. Read it each issue. Send today. One year, 9/- (for Australia, \$1; for South Africa, 70c).

'Lift Up Your Head' in CONFIDENT HOPE

Why?

With the world torn more and more by discord and confusion, how is that possible?

With man's efforts failing on every hand to restore peace and security, with what confidence for the future?

The answer is one that brings real assurance because it is founded on the Bible. After describing the unprecedented violence and world turmoil the Bible says: "As these things start to occur, raise yourselves erect and lift your heads up, because *your deliverance is getting near.*"—Luke 21:28.

Could you want more reassuring news than that?

But how can you learn more about it?

What can you do to make certain you will benefit?

Read the books

Life Everlasting—in Freedom of the Sons of God and The Truth That Leads to Eternal Life

These two hardbound books total 608 pages and contain literally hundreds of Bible quotations and references. Both for only 6/6 (for Australia, 75c; for South Africa, 53c). Send today.
