## WHY THIS MAGAZINE IS PUBLISHED

Today as never before, what goes on in the rest of the world affects each one of us. "Awake!" reports on the world scene. But it does more for you personally.

It probes beneath the surface and points to the real meaning behind current events. And it gives practical suggestions to help you to cope effectively with the mounting problems of our time.

The scope of subjects covered by "Awake!" makes it a magazine for the entire family. Customs and people in many lands, the marvels of creation, religion, practical sciences and points of human interest all are included in its pages.

In keeping its freedom to bring you the truth, this magazine has no commercial advertisers to please. Also, it stays politically neutral and it does not exalt one race above another.

Most importantly, "Awake!" provides hope, giving you a basis for confidence in the Creator's promise of a new order of lasting peace and true security within our generation.

## CAN YOU FIND SECURITY

## AMID ECONOMIC GLOOM?

HUMAN society today is experiencing increasing anxieties; and this despite amazing technological achievements. Among the chief reasons for this are economic woes. These have multiplied rapidly, plaguing people with uneasiness, tension and gloom.

The tone and content of recent statements made by economists, consumer group spokesmen, and political, business and labor leaders are alarming. Some even fear a complete economic collapse in Western countries.

But why has the economic picture become so troublesome? What can you do to find security amid economic gloom?

### *The Toll of Inflation*

Basic to economic gloom in Western nations is inflation, which refers to a general increase in prices when the buying power of people exceeds the supply of available goods. For a while this may lead to an economic boom, creating more jobs. But eventually serious problems develop. Why so?

Many factors are involved. But one important reason is that much of the buying

power of people rests in borrowed money. There comes a day when people realize that they are deeply in debt. High interest rates and devalued currency may make further borrowing out of the question. They cut back on buying. A lessened demand for many commodities causes industry to reduce production, which may lead to massive unemployment.

This is the situation that many countries find themselves in today. With regard to economic conditions, news sour-

ces in the United States, Canada, Germany, Britain and South America use expressions like "catastrophe"

of inflation," and "gloom all around."

Especially hard hit in the United States recently was the automobile industry. A prolonged sales slump triggered huge layoffs, idling hundreds of thousands of auto workers. The United States unemployment figure then stood at some 7,500,000 persons, fully 8.2 percent of the total work force. "Frightening" and "without parallel" is the way some described the sudden and rapid downturn.

Inflation, like a malignant growth, eats its way into the whole fabric of society. It threatens international trade, monetary

exchange, the stability of wage and price levels, savings, investments, individual, business and national solvency, social security and a host of government programs for the needy, such as lower-cost school lunches and food stamps for the poor.

How has all of this affected John Q. Public? *U.S. News & World Report* remarked: "Inflation . . . now is devouring family savings, putting familiar pleasures out of reach, spreading insecurity." A survey taken in late 1974 "found consumers in a gloomier mood than at any time since . . . 1946."

Why have solutions proposed by the experts failed to dispel inflation? It is because inflation is merely a symptom of a more basic cause of economic woes. What is that?

#### **What Prompts Inflation?**

In an article entitled "Inflation and Deflation," written for *World Book Encyclopedia*, professor of economics Kenneth E. Boulding explains that, when people have money to spend, "they turn to shops and stores, looking for things to buy that they have always wanted." If industry is not producing enough of these desired items (as during a time of war), "the prices of goods are bound to rise as people bid against each other for the small supply that is available." Thus it is that *inflation springs from the desire of people to accumulate material things excessively*. And many of these things are luxury items that have little or no practical value.

All too often this desire for material things is so overwhelming that people go deeply into debt. A 'live now, get now, pay later' attitude inclines them to buy on credit and to live beyond their means. An article on credit counseling that appeared in the Los Angeles *Herald-Examiner* reported that the national indebtedness of

families and single persons in the United States reached "an all-time record of \$820 billion." The article added that Los Angeles area residents are "rushing to take on new credit, some going deeper and deeper into the hole."

Of course, it is not likely that the majority of people will curb their desire for material possessions. But you do not have to imitate their selfish course. Getting a balanced view of material things can help you to find security amid increasing economic gloom.

#### **A Balanced View of Material Things**

Persons throughout the world, whether claiming to be Christians or not, recognize that Jesus Christ possessed outstanding wisdom and insight. Jesus warned concerning an inordinate desire for material things: "Guard against every sort of covetousness, because even when a person has an abundance his life does not result from the things he possesses."—Luke 12:15.

This does not mean that possessions are bad in themselves, or that there is something amiss with living comfortably. The thing to avoid is "covetousness," which means being "inordinately desirous" of material things.

It will help toward balance for one to reflect on how shallow placing one's trust in material possessions can be. Have not many individuals "put a little aside" in a savings account for years, only to find that soaring prices and inflated, devalued money have decimated what little they had? If you happen to live on a fixed income, you know all too well the disappointments of putting trust in the value of money.

But what if you have a good job and your wages keep going up to meet the rise in prices? Here, too, there is need for balance. Have you considered, for example, how quickly things can change? The Philadelphia Sunday *Bulletin* explained: "All

over people are beginning to worry about their jobs. And they should. Both because job security is in no way ironclad and because a little thought now could pay dividends later. It's bad enough to be axed from your job these days. It's still worse to be caught by complete surprise."

This is indeed a critical problem. Reduced sales volume and serious shortages are forcing thousands of businesses to shut their doors each year. An executive of an international management consulting firm noted: "In times like these, too many people keep their heads in the sand, feeling it just can't happen to me, and this is particularly true of people who have been with the same organization for years and years." When one of Chrysler's Detroit plants was threatened with permanent shutdown, an employee exclaimed: "I'm kind of scared about this. I've got six kids and just bought a new car. If I lose my job, what am I going to do?"

Real estate, too, seems to offer little in the way of security. Property owners suffer from heavy taxation, high maintenance costs, vandalism and inability of tenants to pay their rents.

Seeking security in material possessions amounts to leaning on a broken reed that offers no support. But there is a way to real security. What is that?

### ***The Way to Real Security***

The apostle Paul, at 1 Timothy 6:7, 8, makes a practical observation: "For we have brought nothing into the world, and neither can we carry anything out. So, having sustenance and covering, we shall be content with these things." Would not contentment with what you already have ease economic anxiety for you? Probably you possess a number of things that you never use. Would it really hurt to curtail further unnecessary buying?

A person's opinion of himself may be another factor that contributes to economic problems. Is it not true that much unemployment results from unwillingness on the part of many to do menial work or to work for less pay than they received on a previous job? If a job is needed, how foolish that attitude is! Might it not make more sense to lower one's standard of living slightly than to remain stubbornly and unnecessarily unemployed? The apostle Paul, a man who learned from personal experience "both how to be full and how to hunger, both how to have an abundance and how to suffer want," gave this sound counsel: "I tell everyone there among you not to think more of himself than it is necessary to think."—Rom. 12:3; Phil. 4:12.

Another statement of Jesus that can aid toward security in an economic pinch is found at Matthew 6:25, 32, 33: "Stop being anxious about your souls as to what you will eat or what you will drink, or about your bodies as to what you will wear. . . . For your heavenly Father knows you need all these things. Keep on, then, seeking first the kingdom and his righteousness, and all these other things will be added to you." Hundreds of thousands of persons, both in ancient and in modern times, can testify to God's ability and willingness to provide the necessities of life for those doing his will.

Seeking first God's kingdom and his righteousness can contribute toward security even in an indirect way. How so? Because a person who applies Bible principles in his life becomes more diligent at his work. Instead of loafing on the job, stealing time from his employer, he obeys the counsel at Ephesians 4:28: "Let the stealer steal no more, but rather let him do hard work, doing with his hands what is good work." Employers will often be reluctant to dismiss or lay off such a worker.

The Bible provides further basis for security in that it foretold the present "critical times hard to deal with," including severe economic woes, as a sign of "the last days" of the present system of things. (2 Tim. 3:1; Matt. 24:7, 8; Rev. 6:5, 6)

Soon, as the inspired Scriptures promise, a new system will obtain earth wide in

which economic woes will be gone forever.

—2 Pet. 3:13; Rev. 21:1-4.

Would you like to enjoy the security of that new system free of economic gloom? Jehovah's witnesses will be glad to help you to meet God's requirements for this by conducting a free home Bible study with you.

# KIDNAPPINGS

## -LIFE IN THE BALANCE!

NOWHERE does the value of a single life seem more apparent than when a kidnapping occurs. Relatives, friends, sometimes whole nations become galvanized with fear for the life of the hostage. A mood of helplessness and angry frustration prevails. Heroic efforts to meet the kidnapper's demands are made. Money becomes almost meaningless compared to the value of that one life.

Typical is the view expressed in a New York Times editorial: "As long as the victims' lives are in danger, efforts to save them are paramount. . . . The first priority must go to saving innocent lives." Thus authorities usually stay in the background to avoid jeopardizing delicate negotiations for release. And what relief and joy if the victim is released unharmed!

In a few short years, the world has

plunged into what some are calling "the age of the kidnapper." Kidnapping and its more recent counterpart—hostage taking—have suddenly mushroomed world wide. Argentina's first kidnapping in thirty-five years occurred in 1968. There were two in 1969. But by 1973, they were averaging about ten a week! Ransoms totaled over \$50 million that year. One abducted American businessman alone brought his captors more than \$14 million.

"About the only growth industry" on the troubled Italian economic scene "is kidnapping," observes *Time* magazine wryly. In fact, "kidnapping has become a very profitable industry," says a member of Italy's parliament. "In the last five years kidnappers have raked in \$24.5-million, no less than \$8-million in 1974 alone."

Other nations around the globe have experienced rapid growth of kidnappings and hostage takings within their borders; but the problem is also international. Abductors now strike almost anywhere in the world. Why do they use such methods?

### *Why Kidnappings?*

What many authorities long feared has taken place. Frustrated political groups

seeking a hearing have discovered that kidnapping and hostage taking are ideal political weapons. When certain lives are at stake, they have found, there is little that families or authorities will not do to save them. Modern communications make these incidents into world events that are seen on television screens by countless millions. Thus the abductor's cause gets global attention far more effectively than any number of less spectacular efforts.

What is most important to political extremists is that it seems to work. It seems to them that the more spectacular the act, the more likely the world is to discuss their grievances and exert pressure on their political opponents. Publicity spreads the word. Success of one group stimulates similar groups in other lands to use the same methods. "When spectacular terror succeeds," notes the Long Island *Sunday Press*, "it is almost certain to be repeated, and a self-feeding phenomenon is in motion."

Viewing the success of political opportunists, common criminals—seeing a way to make easy money with little risk—go into the same business. "We haven't paid a bank [robbery] claim in the last two years," says a Buenos Aires insurance man. "The robbers are all into kidnapping."

To curb the trend, many believe that kidnappings should not be given so much publicity. "Publicity just leads to planting the idea in some [deranged person's] brain," declares a U.S. police official. The fact that such acts often come in waves, after a widely publicized incident, seems to bear this out. But others fear the implications of curbing freedom of the press in any way. "Suppression of news, even of the most shocking sort, is the handmaiden of tyranny," writes the editor of *U.S. News & World Report*.

Some have even suggested making it a

federal crime to pay a kidnapper's ransom demands. The "family or any others who pay ransom are simply advertising that kidnapping pays," declares a prominent U.S. government adviser. "They are thereby inadvertently involving countless other innocents in ordeals of terror."

But others say: Consider the consequences of such a move. Would heartsick relatives of the hostage even notify officials if there were such a law? Would they not be tempted to handle the matter themselves to save their loved one, leaving authorities out altogether? Thus, some observe, enforcement efforts might be thwarted still more.

### **"Siege Mentality"**

Government impotence at curbing the rising tide of criminal and political kidnappings has created a climate of fear among their prime targets—the wealthy and representatives of foreign corporations. Kidnappers have discovered that an executive's corporation is a sort of "substitute family" that can be forced to pay even higher ransom demands than a wealthy person's own family.

But they continue to prey on the local wealthy as well. "A siege mentality pervades the millionaire families that dominate local society" in Monterrey, Mexico, reports the *New York Times*. They have "quietly dropped from the social circuit." Established life patterns have been changed. Potential victims are no longer free to come and go as they please. Daily schedules have to be varied, different routes taken to work—anything to avoid the habitual patterns for which kidnappers look. Some prosperous people in the north of Italy are reportedly sending their children to school in nearby Switzerland, hoping that they will be safe there.

In some places homes are made into fortresses with shatterproof glass in windows,

barbed wire topping surrounding walls, all-night floodlights and patrolling armed guards. Automobiles are armored against bullets. Many hire bodyguards with the latest automatic weapons. Says one American businessman in Argentina: "Fear overshadows everything. I spend more time on safety than I do with [the business]." Another says: "It costs my company \$5000 a month just to protect me and my family."

Thus, aside from the direct cost of ransom payments, kidnapping and hostage taking create a huge burden of related security costs. Private security agencies that supply bodyguards and other protective services report big increases in their business world wide. Kidnap insurance sales are booming. One prominent international company reportedly offers a \$1-million policy for about \$500 annually if the insured pays the first \$2,500 of the ransom. Of course, insured persons would be prime targets for kidnappers were it not for the fact that names are kept completely confidential.

Specially trained anti-kidnap dogs are in demand. One Italian kennel owner who trains killer guard dogs says: "I have already sold trained Alsatian dogs to top company executives, industrialists, actors and professional men and the demand is still growing." The dogs, costing from \$1,600 to \$4,800, are trained to attack anyone who assaults their master. They can kill the attacker if not stopped, according to the trainer. One California firm has sold hundreds of guard dogs at \$2,500 apiece.

With all the precautions, though, is one safe? A police officer assigned to a highly publicized U.S. kidnapping made this sobering comment: "What you have to realize is that if someone really wants to kidnap a person, that there's just not much anybody can do to stop it."

Similarly, an American diplomat, who was kidnapped in Mexico and released af-

ter the kidnappers' demands were met, gave this advice to students at the American Graduate School of International Management: "A lot of people asked about carrying firearms and so forth. I think that's foolish and ridiculous. You're so outmanned and outarmed that it wouldn't do you any good."

Political activists seem bent on using this most powerful weapon to the limit. A spokesman for one international security firm predicts that his line of business is the wave of the future: "Never before in the history of man have we seen the types of violence, the animalistic acts that we are going to see soon in our society." Surely mankind is feeling "the increasing of lawlessness" that the Bible predicts would mark "the last days" of this failing global "system of things."—Matt. 24:3, 12; 2 Tim. 3:1.

#### **A Balanced View of Life**

There is something else to think about: Does it not strike you as strange that people are so appalled with threats to the lives of kidnap victims or hostages, yet countless other persons daily threatened with death are almost unnoticed?

Think of the millions who are starving at this very moment—what makes their lives less valuable? Abortions continually snuff out numerous young lives; multitudes are not just kidnapped, but *murdered* every day around the globe. And what of the myriads already slaughtered and now being killed in this generation's wars? These lives usually pass with hardly a ripple.

Politics, crime and moral expediency have made life very cheap, while, paradoxically, threats to certain lives cause a terrific furor. As one person put it: "People will give millions to save one life, but very little to save millions of lives!" Do not such

lopsided values reveal that there is something very amiss with the worldwide system of things that has produced them?

That is why only the complete global change promised by God can get mankind's view of life back in balance. That change will necessarily be so sweeping that the Bible speaks of a "new earth" after-

ward, a new human society under new governmental arrangements, when the "former earth" and its cheap view of life will have "passed away." Then the value placed on life by the great Life-Giver will prevail—bringing into reality the longed-for condition where "death will be no more."—Rev. 21:1-5; 2 Pet. 3:13.

INSTEAD of simply learning twenty-six letters as in the English alphabet, how would you like to memorize thousands of picture-like characters? How would you like to write a letter, not by typing at speeds of fifty to eighty words per minute, but by laboriously drawing each character by hand? This is part of learning Chinese, both written and spoken.

Chinese is reputedly one of the oldest languages in the world, and perhaps the most difficult. The difficulty lies mainly in the fact that the Chinese language does not have an alphabet. Instead, it has thousands of different characters. While a standard dictionary for high school students may contain only about 10,000 characters, a comprehensive dictionary contains over 40,000. However, it is generally estimated that if a person knows from 3,000 to 4,000 characters, he should do reasonably well in reading publications of general interest.

Characters are the basic units or symbols of the written language and are all monosyllabic. While each has its own meaning, two or more characters may be combined to form new words. For example, the character "ren" (人) by itself means "a human"; when combined with the character "min" (民), the resulting word "ren min" means people of a country. "Ren" can also be combined with two

# A Language

THAT IS  
**RADICALLY  
DIFFERENT**

BY "AWAKE!" CORRESPONDENT IN HONG KONG

other characters "jiann" (see, 見) and "jeng" (prove, 証) to form the word "jiann jeng ren" (見証人), meaning a witness. In the language spoken today, usually two or three separate characters are required to denote a single concept or term.

Most Chinese characters are made up of (1) the radical, which often provides a hint to the meaning, and (2) the phonetic, which gives a key to pronunciation. For example, the "heart" radical (心 or 忄) is found in characters that express thoughts, emotions, personal characteristics and the like. There are 214 radicals listed in most dictionaries, while the number of phonetics varies according to the preference of the individual scholar. Though such phonetics originally were

used to indicate the pronunciation of the word, owing to changes in pronunciation over the years, these are no longer reliable. Thus you may find that two characters with the same phonetic part have no similarity at all in their pronunciation nowadays.

## *The Chinese Writing*

Though living in a land where another language is used, you may very well have seen Chinese writings somewhere, perhaps on signs outside a Chinese shop. To you, they may look like some weird drawings. As a matter of fact, a number of characters were originally drawings or pictographs of things they represent, although today the resemblance cannot be seen. For example, the word for sun was originally a circle with a curved line across it (Θ), while the present form is a rectangle with a stroke across the middle (日). The character for river was originally three curved lines (ゑゑ), obviously depicting the meandering of streams, but now the character has become just three straight lines. Sometimes two characters written in proportion are combined to form a new character representing abstract ideas. Thus the one character for brightness (明) is formed by combining the two characters for sun (日) and moon (月). The word for "good" (好) is made up of the characters for female (女) and child (子), thus revealing the high regard the ancient Chinese had for family life. But the majority of the characters are formed by combining a radical with a phonetic.

When you examine the Chinese characters, you may notice that they are made up of different strokes. According to W. Simon in his book *How to Study and Write Chinese Characters*, there are at least fifteen different strokes. The number of

CHINESE CHARACTERS WITH ALPHABETIC EQUIVALENTS AND ENGLISH TRANSLATION					
耶	和	華	是	我	的
Yeh <sup>1</sup> Ye-	Ho <sup>2</sup> ho-	Hua <sup>2</sup> vah	shih <sup>4</sup> is	wo <sup>3</sup> my	ti <sup>1</sup>
牧	者	我	必	不	至
Muh <sup>4</sup> shep-	jeh <sup>3</sup> herd,	wo <sup>3</sup> I	bih <sup>4</sup> shall	pu <sup>1</sup> not	tsyh <sup>4</sup>
缺	乏	—	詩	篇	23:1
chiue <sup>1</sup> want.	tar <sup>2</sup> .		Shyh <sup>1</sup> Psalm	pian <sup>1</sup>	23:1. 23:1.

strokes in a character can be as few as one to as many as thirty-five or more.

## *Using a Chinese Dictionary*

Since one usually has little idea of how an unknown word should be pronounced, the best way to make sure is to consult a dictionary rather than making a guess. A number of different systems for arrangement of characters are in use. The most popular system arranges the characters according to their radicals and number of strokes. Thus you must first be thoroughly familiar with writing the characters and recognizing the radicals.

The characters in the dictionary are arranged under the radical they contain and the radicals are arranged according to the number of strokes, which may be from one to seventeen. So, you first must decide which of the 214 radicals is contained in the word and then count the number of strokes in the radical. Complicated? Well, finding the radical is not always a simple matter either, so most dictionaries give a list of characters the radicals of which are difficult to find. These are arranged according to the number of strokes they have.

Another difficulty is that some words may contain two or even three parts, each of which is a radical. So after trying in vain to locate it under one radical grouping, you must look under another radical grouping. The matter of finding the right radical is further complicated by the fact that the position of the radical in characters varies. It can be at the right, left, top, bottom or even right in the middle.

Once you have found the right radical, then you count the number of strokes in the rest of the character, as all characters having the same radical are arranged according to the number of strokes they have, excluding the strokes of the radicals. This is further complicated when one stroke appears to be two. Thus it can readily be seen that it is quite a laborious task to look up words in a Chinese dictionary.

### The Spoken Language

Foreigners learning to speak Chinese often have trouble with the so-called tones, which are inflections of the voice, serving the purpose of distinguishing one word from another. In the national language of China, called Mandarin, there are four tones, namely, the upper even, lower even, rising, departing, though some authorities add a fifth, the entering.\* But in Cantonese, a dialect spoken in Canton and Hong Kong, there are nine tones. The difference between one tone and another is usually very small and difficult for foreign students to distinguish. However, the slight difference in pronunciation sometimes can mean a world of difference in meaning. For example, in Mandarin the word for "lord" is "chu<sup>3</sup>," while the word for "pig" is "chu<sup>1</sup>." So when a foreigner wants to say "tien chu<sup>3</sup>" (heavenly lord, the term

\* The different tones are indicated by either tone number or tone signs. There are several systems in use. For example, one tone-number system uses the number 1 to represent the upper even tone, 2 for the lower even, 3 for rising, 4 for departing. This is the system used in this article.

Chinese Catholics use to refer to God), if he is not sure of the right tone, he can easily say "tien chu<sup>1</sup>" and refer to a heavenly pig instead, much to the puzzlement or amusement of the Chinese listener. Understandably, a foreigner learning the language must keep his sense of humor to avoid discouragement.

This peculiarity of the Chinese language—a great number of words having very similar or identical pronunciation—makes it very difficult for foreigners to master. For example, in Mandarin there are 69 words pronounced as *i* (short), 7 of which are in tone 1 (upper even), 17 in tone 2 (lower even), 7 in tone 3 (rising) and 38 in tone 4 (departing). While in English two different words with identical pronunciation, such as dear and deer, are exceptions, in Chinese they are extremely common. So when listening to Chinese being spoken, one has to rely heavily on the context to decide the meaning of the words used.

As expected in a big country like China, there are scores of dialects spoken by the people in different parts of the country. In some parts of the country, especially in the south, a traveler may come across different dialects in villages only a few miles apart. Sometimes even people of neighboring villages may have difficulty in understanding one another. Some dialects are similar to one another, such as the ones spoken in northern China, while others do not even sound remotely similar, such as the Cantonese dialect and the Shanghai dialect. These two dialects are completely different not only in their vocabulary, but also in the pronunciation of various characters used in the written language. Also, some dialect words are only spoken but have no written form. Indeed, but for the written language, people from different parts of China would have serious difficulty in understanding one another.

er. Fortunately and amazingly, although the Chinese speak many widely different dialects, they all read one common language, the written Mandarin. With the exception of the Mandarin-speaking persons, all Chinese speak one way and write another way. But if two Chinese cannot speak with each other understandably, they can at least communicate in writing.

### **Efforts at Reform**

Because the Chinese is such a difficult language to learn, especially for foreigners, in modern times efforts have been repeatedly made to simplify it by various methods. Some advocate simplifying the characters, as Communist China has done, so that they can be learned more easily. However, such effort is not at all favored by the Nationalist government in Taiwan, nor by the more conservative-minded and older Chinese. Others have tried romanization, replacing the characters with romanized letters. The first ones to do this were the Catholic missionaries who came to China during the Ming Dynasty (1368-1644 C.E.). But the literature they wrote in romanized letters was used only by the missionaries themselves. In the nineteenth century, missionaries of Christendom translated the Bible into a number of dialects, such as the Soochow, Shanghai, Ningpo, Amoy and Cantonese dialects, in romanized letters. In 1867, the English scholar T. F. Wade published his own system of romanization, which has been widely used by writers of Chinese textbooks and dictionaries.

Then in 1918 the Chinese government published a set of forty phonetic symbols to help readers to pronounce the characters correctly. These are printed alongside the characters instead of replacing the latter. This phonetic system is used simply as an aid to pronunciation and is not meant to take the place of the characters.

In 1934 a Latinized Chinese alphabet was published. It was a rather simple system without any attempt to indicate the particular tones of the words. As a result, it could easily cause confusion and did not prove to be very popular with the people. It has since gone into complete oblivion. Attempts have also been made by Communist China to Latinize the Chinese language, but the matter is still very much in the experimental stage.

### **Future Prospects**

Though repeated efforts have been made to simplify the Chinese language or even change to an alphabetic style, so far such efforts have not achieved any great success. The one peculiarity of the Chinese language mentioned previously, that it has so many words with very similar or even identical pronunciation, certainly makes it very difficult to be expressed clearly and accurately in an alphabetic style. Besides, it would understandably be a formidable task to change the vast amount of classical literature into a romanized language, not to mention teaching 800,000,000 persons a new method! This may partly explain why the Chinese people are still content to use their very difficult language and have their children spend many long hours copying, reciting and memorizing the thousands of characters needed to be literate.

Looking at the hundreds of languages spoken in different parts of the earth, one can readily see how all these different languages have been a divisive force in preventing free communication among the inhabitants of the earth. One only needs to travel to a foreign land without knowing its language to realize how helpless and frustrated one can feel when not able to understand what people say and when not understood by them.

In the interest of free communication among all men, it would certainly be a great blessing if all mankind would speak just one common language. But how could this be done in a world that is becoming increasingly nationalistic and divided?

Happily, though such a task seems to be beyond man's ability to accomplish, it is not impossible for mankind's Creator,

**P**ERHAPS you never knew that the pope has an army. But it is true. For nine years I served in the Vatican military as a member of the Palatine Guard of Honor.

Of course, the pope does not have a regular army, as popes used to. Pope Julius II in the early sixteenth century would assume personal command of his army and lead it into battle. Also, the Roman Catholic Church in the past maintained religious military orders. Of these, *The Catholic Encyclopedia* says: "These orders surpassed, in that cohesiveness which is the ideal of every military organization, the most famous bodies of picked soldiery known to history."—1911, Vol. X, page 307.

So it should not really surprise anyone that the modern-day state of Vatican City would also have a militia.

#### *Recent Military Organization*

Of the four armed corps that the Vatican has maintained in recent years, the Swiss Guard is probably best known. Since 1505, when Pope Julius II made a treaty with the Swiss to supply constantly 250 men as his bodyguard, a corps of Swiss military have attended the pope. In August 1959 Pope John XXIII reorganized

Jehovah God, to achieve. In fact, it is his expressed will that, in the very near future, all mankind will be united under the righteous and perfect government of God's kingdom in the hands of his Son Jesus Christ. Then we can reasonably hope to see all mankind speaking one common language that can express their thoughts and feelings perfectly.

## *I was a* **PALATINE GUARD**

the corps to include a number of officers, two drummers, a chaplain, and seventy guards.

The Noble Guard apparently once had even greater prestige, since *The Catholic Encyclopedia* called it the "most distinguished corps of the papal military service." It was formed in 1801. The Papal Gendarmes and the Palatine Guard completed the pope's defense corps.

The Palatine Guard of Honor was formed in 1850 by Pope Pius XI. He decreed that two existing bodies of militia be united into one body under this new name. Prior to 1870 the Palatine Guard was assigned military operations in war, but afterward their functions were largely ceremonial.

From 1968 to 1971, however, the Noble Guard, Palatine Guard and the gendarmerie were dissolved. So the Swiss Guard alone remains of the Vatican military.

### **Why I Wanted to Join**

My father had been a member of the Palatine Guard for about thirty years, a position of which he and my mother were very proud. And so they desired that I follow the family tradition. But there were other reasons I wanted to join.

I had drifted away from religion in my teens, being deeply influenced by the evolutionary training that I had received in school. So I felt that if I were in close contact with the most prominent religious leaders in the world, including the pope himself, my faith in God might be strengthened.

Also, I must admit, another reason for wanting to join was the esteem and glamour associated with the position. As one of the Palatine Guard a person could meet many famous people and enjoy a place of prominence at important religious functions.

### **Acceptance**

So in 1960, at the age of eighteen, I submitted my application for admittance to the Palatine Guard. After being favorably recommended by my parish priest, I was called for a personal interview.

I remember well the anxiety I felt as I approached the imposing buildings of the Vatican. I entered the reception hall and before me was a long table. Behind it sat the Corps Commander, the Chaplain Colonel and four other persons. At one side of the room hung portraits of ten popes, and beside each of them a wrinkled flag in memory of past battles.

First I was asked some personal questions. Then the chaplain asked me to recite some Catholic prayers, such as the

Apostles' Creed, Act of Faith and Act of Hope. Having failed to pay close attention to religious instruction, I feared that my superficial knowledge would be noted. But my worries proved unfounded, since the interview was only a formality. About a month later, I was admitted to the Palatine Guard.

### **Training and Dress**

After a brief religious service, my training started with about an hour's lesson on religion. Then every Thursday I attended a course of religious instruction. I hoped that this would help me to grow in knowledge of God and that my doubts regarding his existence would be removed. But it was not to be so. In fact, Church dogmas that were taught us only increased my doubts.

However, I did enjoy the military training. In time, I was permitted to wear the impressive military uniform of the Palatine Guard. It included a black jacket, blue pants made from soft young beaver skin, a white belt, black shoes, and a rigid black hat with visor and a plume of red feathers. Other accessories included an assortment of thick golden cords, and showy golden-colored epaulets that tourists would seek to tear off during parades.

### **In the Pope's Service**

The pope would hold audiences with visitors in the throne room or in St. Peter's Basilica. Generally I was assigned ante-room service, being stationed at the entrance to the hall where the pope received his visitors. The visitor would be accompanied by a chamber master or footman, and the moment he passed in front of us we would snap to attention. I particularly remember two high-level visits.

One was that of a Buddhist monk clothed in a yellow tunic. He visited Pope Paul VI during the Vatican Council II to

speak in behalf of peace in Vietnam. That visit caused a sensation because, at the time, newspaper stories about Buddhist monks committing suicide by burning themselves were common.

The other visit was that of Queen Elizabeth of England, who is recognized, not only as a political head, but also as head of the Anglican Church of England. In keeping with Vatican protocol, the queen, as well as each person in her retinue, was accompanied by a representative of the pontifical court. On arriving before the pope, the guest's attendant usually suggests that the guest kiss the ring when the pope extends his hand. Thus the queen bowed and kissed the pontiff's hand—the head of the Anglican Church bowing to the head of the Roman Catholic Church—quite a successful diplomatic maneuver on the part of the pontifical court!

Other vivid remembrances I have are of the parades when the Palatine Guard, preceded by the sounding of imperial trumpets, would enter St. Peter's Square. For example, there was the annual June 2 celebration in honor of the Italian army, during which the pontiff imparted the solemn *Urbi et Orbi* blessing.

I also served in the honor guard during many official visits of heads of states, including those of President de Gaulle of France, King Hussein of Jordan, President Sukarno of Indonesia and Emperor Haile Selassie of Ethiopia. I served, too, at the entrance to Pope John XXIII's death chamber in June 1963 and shortly afterward at the election of Pope Paul VI.

### **Pomp and Ceremony**

On Wednesday morning the pope would hold a public audience in the throne room with persons who had made appointments in advance to see him and receive his blessing. It was indeed an impressive spectacle

when the pope would appear with his entourage for these occasions.

The pope made his entrance seated on a sort of throne on a platform that was carried by his servants. These would be followed by a large retinue of colorfully and gorgeously attired ecclesiastics and attendants. They had such titles as Cavalier of the Cape and Sword, Secret Gentlemen's Servant, and Master of the Chamber. Included, too, in the procession were the commanders and officers of the various army corps of the Vatican.

Almost unbelievable scenes of all kinds took place on these occasions. For example, one might see a screaming woman tearing at her hair and raising a crucifix to the pope as he passed by, protected behind the movable wooden railings. Some hysterical persons had to be removed by force. Babies were held on high to have the pope touch them.

Also, extended toward the pope were scores of hands holding a letter or sheet that had written on it some supplication. And church dignitaries near the pope's portable throne would accept these in a condescending manner. But there were also persons who laughed, others who cried, and still others who remained indifferent. Hymns were sung, and handkerchiefs waved.

Whenever these public audiences were held in St. Peter's Basilica the scene was even more striking. The acclaim raised at the pope's entrance followed him like a wave of the sea as he moved along. However, in recent years I noted a decrease in the number of visitors.

### **Coronation of the Pope**

Surpassing, however, the pomp and splendor of papal audiences was the pope's coronation. "The grandeur," witnesses

have said, "will never be forgotten." I was there at the coronation of Pope Paul VI on June 30, 1963, and it was indeed a notable event in my career as one of the Palatine Guard. Present were heads of state, ministers, ambassadors, political and military dignitaries, journalists and Catholic and Protestant representatives from all parts of the world.

It seemed almost unreal—all the extravagance, the precious stones, the brilliantly expensive dress of the participants, especially of the pope carried on his triumphal throne, the slowly moving fans of ostrich plumes about him, the music, the ceremony. The grandeur beggars description. The coronation of the ancient Byzantine emperors, after which papal coronations are patterned, surely could not have been more ostentatious.

Then there was the magnificent entrance of the entire papal court in great pomp, with the Palatine Guard heading the procession. The slow-moving procession lasted almost an hour in a merry-go-round of brilliant colors, as a chorus of young voices accompanied the moving line of hundreds of cardinals and bishops. Finally Pope Paul VI was crowned with a splendidly headpiece mounted with precious gems, a regal symbol of the power supposedly conferred on him as the representative of Christ on earth.

But I asked myself: Is it truly the will of God that his Son have such a representative on earth? Is all this pomp proper? Does Christ approve?

#### **Answers I Received**

I received an answer from a blind man who took advantage of the opportunity to speak to me at the office where I generally worked. From what he showed me from the Bible I came to appreciate that the pope was not imitating the example of

Christ and his apostles. Why, when an Italian army officer fell at the apostle Peter's feet to do obeisance to him, I learned, Peter said: "Rise; I myself am also a man." (Acts 10:25, 26) Yet Church leaders behave in utter contrast to Peter!

But there were other matters. The Catholic Church teaches that humans have an immortal soul that they say may be burned forever in a hell of fire or tormented in purgatory, depending upon the sins committed. Yet I learned that the Bible teaches that man is a soul, and he has no separate immortal soul. "The soul that sinneth, the same shall die," the Catholic Douay Version Bible says. (Ezek. 18:4) And the Bible hell is obviously not a place of fire, as shown by such Bible passages as King David's prayer to God: "If I descend into hell, thou art present." The Scriptures make clear that the Bible hell is simply the common grave of mankind.—Ps. 138:8, *Douay Version*; see also Job 14:13; Ecclesiastes 9:5, 10; Acts 2:31.

Furthermore, I was shown that God is not a Trinity. He is not three coequal gods and yet one God, as the Catholic Trinity teaching, in effect, says. "The Lord thy God is one God," Christ taught, and he also acknowledged: "The Father is greater than I." (Mark 12:29; John 14:28, *Douay Version*) I learned these things from my Bible discussion with this blind man, who is one of Jehovah's Christian witnesses.

However, thinking about these things began to disturb me, for I realized that I had a responsibility before God to act in accord with these truths. One day I was at the club of the Palatine Guard sitting in the movie-projection room near a monsignor. During the change in reels I asked him in a matter-of-fact way if he knew anything about those people who claim to be able to prove from the Bible that there is no Trinity, that the soul is not immortal and that there is no hellfire. He asked

whom I meant. I answered, "Jehovah's witnesses." He surprised me when he replied, "Ah, but those are Christians."

Thus I began a serious study of the Bible with Jehovah's witnesses, and I received the Bible-based knowledge that has truly strengthened my faith in God. In time I

**A FOREIGNER**  
A traveling through the continent of Africa during the eighteenth century was undoubtedly impressed with the seemingly endless variety of peoples and cultures. Communication was accomplished by means of numerous highly developed and complex languages. But even more startling, perhaps, was the fact that the peoples were good mathematicians. Some of their methods of calculating are still being used today.

In the eighteenth century the Hausa city of Katsina in northern Nigeria was a center of learning, where Muhammad ibn Muhammad specialized in numerology. However, for most of the sub-Saharan tribes, counting was and is simply a part of their way of life.

#### *How They Count to Twenty*

Consider the Yoruba, Ibo and Efik languages of Nigeria and the Gun language, which is spoken in Dahomey. Each language has its peculiar number system and each system is interesting and practical.

Although in the Yoruba, Gun and Ibo

dedicated my life to serve the true God, Jehovah, and since then have had the joy of wielding, not a literal weapon, but 'the sword of the spirit, God's Word,' helping others also to learn the truth about Jehovah God and his grand purposes. (Eph. 6: 17)—Contributed.

# How Does AFRICA Count?

By "Awake!" correspondent  
in Nigeria

languages the numerals from one to 10 each have individual names, there are many dissimilarities in their counting methods. To a large extent, 20 is the basic unit in both Yoruba and Ibo. On the other hand, 40 is more often used as a base in Gun. In Yoruba and Gun, numerals continue to have individual names up to 15, but then the Yoruba language completes the rest of the teens by subtracting from 20. However, in Gun this is done by adding to 15.

In counting from 11 to 19, the Ibos add their units to 10; but the Efiks have a totally different system, using 5 as their basic unit in counting up to 20. Thus the number 6 in Efik is  $5 + 1$ , 11 is  $10 + 1$ , 16 is  $15 + 1$ , and so on. This means that the numerals one to 5 and 10, 15 and 20 all have individual names. Beyond 20 each system employs seemingly complicated ways of designating the numerals. A look at each language should prove interesting.

## *Up, Up and Beyond Twenty*

As we have already seen, the Yorubas make use of 20 as their basic unit. Thus the numerals 20, 200 and 400 have individual names. Other decimal units (progressing by tens) are established by multiplication of 20 or 200, and subtraction of 10 or 100 as required. Thus 60 is expressed by three 20's, and 50 is expressed as three 20's minus 10. Of course, the expressions designating these numerals are contracted into single words in each case. The intermediate numbers between decimal figures are expressed by adding units up to 5 and subtracting units beyond 5. Thus 24 is expressed as  $20 + 4$ , while 28 is expressed as  $30 - 2$ . The number 565 is expressed,  $(200 \times 3) - (20 \times 2) + 5$ .

In contrast to the Yorubas, the Ibos, the Efiks and the tribes that speak Gun do not make use of subtraction in expressing their numerals. The Ibos, employing the basic numerals of 20 and 400, establish their large decimal numerals by multiplication and addition. Thus 50 is expressed as two 20's plus 10 ( $20 \times 2$ ) + 10, and 300 is expressed as fifteen 20's ( $20 \times 15$ ).

How would you like trying to express 1,000? It is simple; just say: "nnu-abua na ogu-iri" (two 400's and ten 20's). Or 1,000,000 is expressed as: "nnu-nnu-isi na ogu-nnu-ise" ( $400 \times 400 \times 6$ ) + ( $20 \times 400 \times 5$ ). These expressions are perfectly understood by the Ibo villagers.

The system employed by the Efiks is somewhat different. We have already seen that, below 20, 5 is the basic unit. All the decimal numerals that are multiples of 20, up to 100, have individual names. The intermediate decimal numerals are formed by adding 10 to the lower numeral. Thus 50 is expressed as  $40 + 10$ .

It appears that 100 used to be the highest numeral that had a vernacular name. Figures beyond that were expressed as multiples of 100. Now, however, the word

"tosin" is used to express 1,000, apparently a corruption of the word "thousand." Also, the English word "million" is used.

## *East African Methods*

The Malagasy people of the large island of Madagascar off the east coast of Africa are thought to have migrated from the Malayan Peninsula more than two thousand years ago. Thus their language is of Malayan origin, and their system of counting dates back to centuries before they left Malaya.

In this system all units from one to 10 have individual names. Numerals from 11 to 19 are expressed as 10 plus the appropriate units. The decimal numerals up to 90 are expressed as multiples of 10, such as "telopolo" (30, or three 10's). The numerals 100 ("zato"), 1,000 ("arivo"), 10,000 ("alina"), 100,000 ("hetsy") and 1,000,000 ("tapitriza") all have specific names. "Tapitriza" literally means "end of figures." Other decimal numerals are obtained by multiplication, as in English, such as "telo arivo" (3,000), "telo alina" (30,000, or  $3 \times 10,000$ ), and "hetsy tapitriza" ( $100,000 \times 1,000,000$ ).

The Malagasy people express their numerals backward, and compound figures can become veritable jawbreakers. Try pronouncing 1,569,753 in the Malagasy language: "telo amby dimampolo amby fiton-zato sy sivy arivo sy enin-alina sy dimy hetsy sy iray tapitriza." Remember that the numerals are expressed backward, so that it literally means:  $3 + 50 + 700 + 9,000 + (6 \times 10,000) + (5 \times 100,000) + 1,000,000$ .

On the mainland, the majority of languages spoken in East, Central and South Africa belong to a family of languages that has been given the name Bantu. One of these languages, Swahili, which is reputed to be one of the twelve principal languages of the world, has been modified and affect-

ed by other languages, such as Arabic. So we find, for example, that 6, 7 and 9 are designated by Arabic words. All the units have individual names, and the numerals above 10 are formed by adding the units to 10. Twenty and all the other decimal numerals up to 100 have their own name, as does 1,000; but multiples of 100 are expressed by multiplication and addition. Thus 999 is expressed as "mia tisa tisini na tisa" (literally, "hundreds nine, ninety and nine").

The Cinyanja-speaking peoples have specific names for their units from one to 5 and for the decimal numerals 10, 100 and 1,000. The other units from 6 to 9 are expressed as  $5 + 1$ , and so on. The numbers from 11 to 15 are expressed as  $10 + 1$ , and so on, while 16 to 19 are expressed as  $10 + 5 + 1$ , and so on. A system of multiplication and addition is used in establishing the designations for all the large numerals. Thus 30 is expressed as  $10 \times 3$ , and 600 as  $(5 + 1) \times 100$ . So people in Malawi have quite a mouthful in saying, for example, 66: "makumi asanu ndi limodzi mphambu asanu ndi limodzi" ( $10 \times [5 + 1] + [5 + 1]$ ).

It can readily be appreciated why not only many Cinyanja-speaking persons but also those using other vernacular languages in Africa have adopted the European words for numbers in their everyday speech. So in Nigeria one can hear a man speaking fluent Efik but using English words for numbers, whereas in neighboring Dahomey Fon-speaking persons will often use the French words for numbers.

#### *Practical Systems*

The different systems of counting of the tribes in the sub-Saharan civilizations have been well suited to their way of life. A further look at the methods employed by the Yorubas of Nigeria will illustrate this.

Over the centuries, their civilization

placed emphasis on trading, and their medium of exchange was the cowrie shell. Buying and selling thus involved the counting and exchanging of large quantities of shells. This explains why the establishing of numbers by subtraction is preferred in their system. They counted their "money" by drawing off groups of five shells in order to establish heaps of 20's and 200's. Then to arrive at intermediate numbers they would subtract the few extra ones from the overall total. This minimized the motions involved in counting.

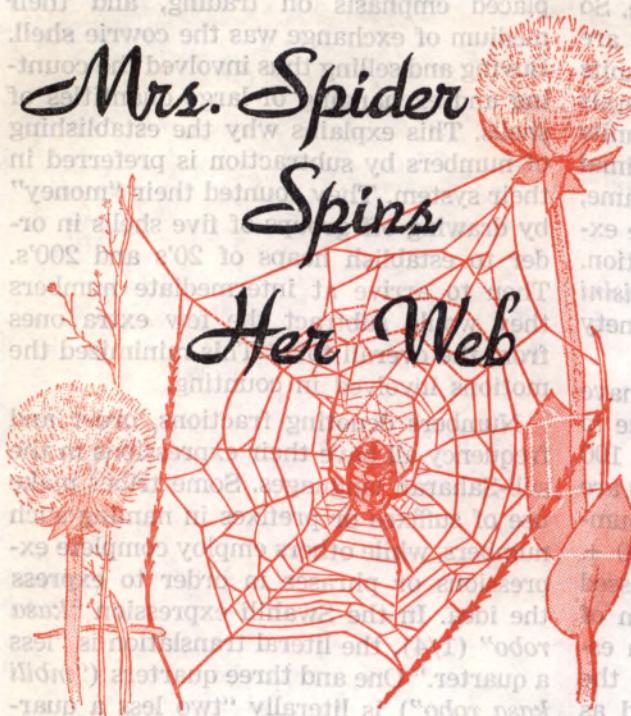

Numbers denoting fractions, order and frequency all have their expressions in the sub-Saharan languages. Some tribes make use of suffixes or prefixes in naming such numbers, while others employ complete expressions or phrases in order to express the idea. In the Swahili expression "kasa robo" (1/4), the literal translation is "less a quarter." One and three quarters ("mbili kasa robo") is literally "two less a quarter."

In African cities up-to-date systems of currency have replaced the use of cowries and manillas or metal bracelets, also once used as a medium of exchange. However, the older complex systems are still widely used in the villages, and even those who cannot read or write in any language are able to accomplish impressive feats of mental arithmetic. Yes, Africa does count in a wide variety of ways and with real skill.

# Mrs. Spider Spins Her Web

**B**EAUTY is in the eye of the beholder, it is said. That can well be stated of Mrs. Spider.

Usually when she happens to come in contact with one of those giants of the earth—Man or Woman—she is greeted with kicks, brooms and flying objects. Her workmanship, one of the marvels of the “world of small things,” is termed a cobweb and brushed aside.

Of course, some humans do speak of the beauty of a dew-covered spider web at dawn. And some do know that Mrs. Spider is normally mankind’s friend, helping to control the insect population and generally striving to stay out of man’s way.

But if more persons knew of her architectural ability, might not even more change their minds? Despite her eight hairy legs and matronly figure, might they not see the beauty of her artistry? Consider just a few of the designs by some of these lady architects.

## Web Designs

At first glance many spider webs would appear to be little more than a jumble of thin threads. But further examination will often reveal great ingenuity.

For example, Mrs. Platform Spider (it is always *Mrs.*, as males do not spin webs) strings many “guy wires” in a crisscross pattern. Below these she constructs a tightly woven silk sheet. Flying insects hit the “wiring” and fall into the net below.

Others build a bow-shaped sheet; and yet others, a rounded dome under which the spider hides. Captured insects are pulled through these sheets. Then Mrs. Spider—often a very tidy housekeeper—repairs her silky “tablecloth.”

But not all webs are motionless traps. One spider actually fashions a lasso. This small, elastic web is pulled taut between the twigs of an evergreen tree and held in place by the “cowgirl” until some unsuspecting mosquito bumps into it. Flash! She lets out some slack on her line and the web springs forward, entangling the intruder! With a series of such snapping movements, the mosquito is thoroughly corralled.

While not all varieties of spiders construct webs, such designers are numerous among the more than 29,000 known kinds. And yet, amidst them all, one “family” is considered distinctive, the artists par excellence. They are the orb (or round) web weavers. These, according to one authority, “build the most beautiful and complicated of all webs.”

Would you like to watch an orb weaver and see how she does it? Let us observe Aranea, the “queen of the spider archi-

tects," as she vigorously begins her next project.

### Aranea Spins Her Web

First of all, you will have to watch closely, for she moves quickly and decisively. Her first accomplishment must be the securing of a main line or "bridge line" from which to work out the foundation lines of her web.

You may wonder at her choice of location—right over a small stream! Why not pick an easier place? But apparently she knows the value of setting her net over an "insect air-line."

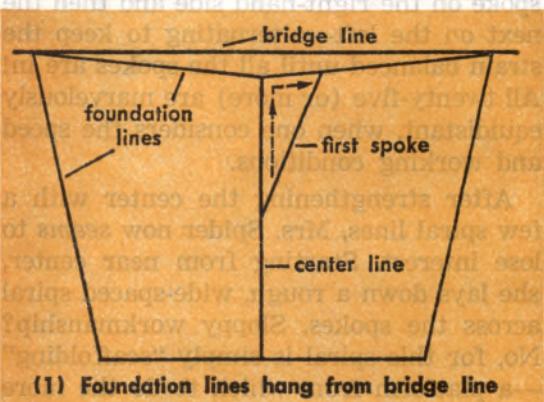

How will she get a line across the stream? See her perched on that twig and raising her belly into the air? She is casting out a silk thread, which the breeze will lift like a kite as she continues to "play out string." Holding the string by the claw of one leg, she feels when it hits something on the other side of the brook. Her objective reached, she pulls up the slack in the line and so has her tightrope over the water.

Working from this bridge line, how rapidly she lays out the foundation lines, forming a rectangle (other supports will later stretch this into a many-sided pattern)! Now note how she goes to the center of the top line of this rectangle and, attaching a silk thread, drops through the air to the middle of the bottom line.

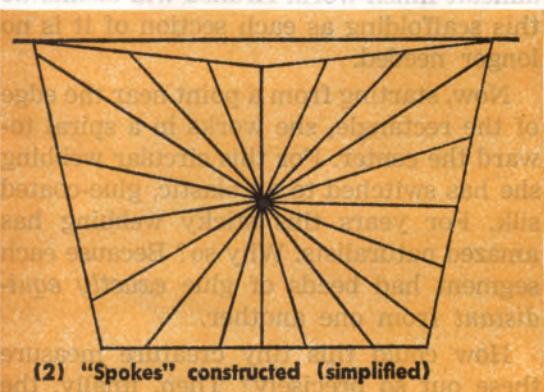

With the rectangle thus halved, she goes to the center of this dividing line and attaches another thread. How does she find center without a measuring tape? you may ask. A very good question, but no one has discovered the answer!

In any case, from this midpoint Aranea carefully plays out her line and walks up to the top foundation line. Traveling along this line a short distance from its center point, she stops and attaches the new rope.

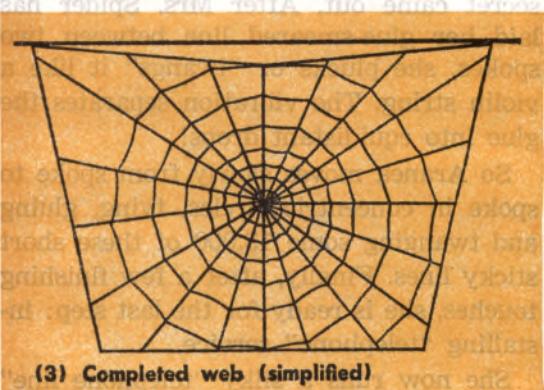

## SPINNING AN ORB WEB

(1) Foundation lines hang from bridge line

(2) "Spokes" constructed (simplified)

(3) Completed web (simplified)

(See Diagram No. 1.) The first "spoke" of a geometric wheel has been formed.

For each spoke she will return to the center point or hub and play out a line by walking along the newly laid webbing. Ob-

serve that this little engineer puts one spoke on the right-hand side and then the next on the left—alternating to keep the strain balanced until all the spokes are in! All twenty-five (or more) are marvelously equidistant, when one considers the speed and working conditions.

After strengthening the center with a few spiral lines, Mrs. Spider now *seems* to lose interest. Starting from near center, she lays down a rough, wide-spaced spiral across the spokes. Sloppy workmanship? No, for this spiral is simply "scaffolding"—a platform from which to do the more difficult finish work. Aranea will dismantle this scaffolding as each section of it is no longer needed.

Now, starting from a point near the edge of the rectangle, she works in a spiral toward the center. For this circular webbing she has switched to an elastic, glue-coated silk. For years this sticky webbing has amazed naturalists. Why so? Because each segment had beads of glue *exactly equidistant* from one another.

How could this tiny creature measure these out so precisely? Then, finally, the secret came out. After Mrs. Spider has laid her glue-smeared line between two spokes, she plucks or "twangs" it like a violin string. The vibration separates the glue into equidistant drops!

So Aranea moves slowly from spoke to spoke in concentric circles, tying, gluing and twanging some 13,000 of these short sticky lines. Finally, after a few finishing touches, she is ready for the last step: installing "telephone" service.

She now runs a silky "telephone line" from her web to her hideaway—often under a nearby leaf. As Aranea cannot see very well, she depends a great deal on her excellent sense of touch. When an insect flies into the web and gets stuck there, the thrashing sends vibrations down the "tele-

phone line," informing Mrs. Spider that her "grocery store" has just been stocked.

In fact, since these vibrations signal mealtime, when Mr. Spider comes to court, he wisely drums a little "tune" on the edge of the web. This "serenade" prevents him from being pounced on by his nearsighted lover!

In considering the engineering and craftsmanship of Aranea, you may find it difficult to believe that less than one hour was needed for the entire operation. Can you imagine any man being able to spread out and mount a net over a wide river in one hour—manufacturing his own rope, glue and "telephone" system at the same time?

Even more astounding is that Aranea will not bother to make repairs when insects tear her netting. She will take the whole web out of its framework and make a new one! Ordinarily she does this once every twenty-four hours. How can she keep doing this? Where does all that silk come from?

#### **Her "Spinning Equipment"**

While all spiders have silk glands or "factories," some have more than others. Of the possible seven different types, most spiders will have from three to five kinds. Each produces a different silk. But how does Mrs. Spider control and work these silks?

Well, underneath her abdomen there are usually six tubelike organs called spinnerets. It is from these that the several different silks are ejected. However, it is not as if she simply has six movable hoses.

Each spinneret is a small lump composed of more than a hundred tiny tubes—each tube able to be individually controlled! Commenting on the threads produced by this intricate "equipment," one naturalist says: "The spider's spinning ma-

chine is far superior to that devised by man to spin bridge cables, for the spider can vary the size and strength of its cable at will merely by spreading the [spinnerets] apart or placing them closely together."

### **The "Intelligence" Dilemma**

"Amazing," declares the scientist who studies her anatomy. But, if he is a proponent of evolution, Mrs. Spider also presents him with a serious dilemma.

"How did this tiny animal (she is not an insect, which only has six legs to the spider's eight) "discover" and "evolve" oil glands in her "feet," preventing her from sticking to her own glue? Who taught her engineering and geometry?"

"Instinct," one may say. True, the ability to make webs is instinctive, for many baby spiders make "perfect miniatures no larger than a postage stamp." But we still face

the dilemma of how such a small creature "evolved" such a wide range of instructions.

'Well, she evolved them over the centuries,' the evolutionist replies. But as one of them honestly notes: "There are no scientific grounds for supposing that the habits of spiders generally have greatly changed." So with each discovery about her, the question resurfaces: Why does she display an "intelligence" not found in much larger, so-called "more advanced" creatures?

For other persons there is no dilemma. They accept the concise answer found in the Bible at Genesis 1:25: "And God proceeded to make . . . every moving animal of the ground according to its kind."

Thus, in the final analysis, you have a decision to make. When you next see the gauzy web of Mrs. Spider, ask yourself: What Master Architect taught her to weave?

### **The Honeybees' "Housing Crisis"**

- What happens when there is no more room in a beehive? "Scouts" are sent out to find a new home. They may find an empty box, a hollow tree or a hole in a wall. Then the queen bee and many of the "worker" bees leave the hive in a swarm—a sort of flying colony. But some workers are left behind to care for the family that will continue to hatch from eggs already laid in the old home, including a new queen. So instead of sending a few bees away from the colony, most of the family moves from the old home!

This can really frustrate a beekeeper, and so one keeper in Florida decided to study the problem. He writes: "Finally I realized that the moment of 'blast off' was not important. It was too late to stop them then. Rather, I had to make them follow my plan. Bees swarm when they run out of room; so I reasoned, Why restrict the queen, the very life of the hive, to just one room? I decided to give every queen another room, a two-room apartment. So I provided a second story to each queen's apartment.

"It worked; they stayed! And now, I simply become the 'midwife' to the birth of each new colony. At the proper time, I divide the hive. There are always plenty of queen cells and drone cells in both 'rooms' of the queen's apartment. Selecting the best of these, I arrange for the next hive."

*Why Be  
Concerned About*

# THE ELDERLY?

**L**ONELINESS, poverty, sorrow and despair. If a loved one suffered such things, what would you do? Likely, render aid, if possible.

A recent study in one region of the United States revealed that nearly half of the elderly found their later years 'a time of loneliness, poverty, sorrow and despair.' Of course, not all older persons have those problems. But they face others.

The elderly who must live on small fixed incomes from pensions, Social Security payments and the like keenly feel today's spiraling inflation. Moreover, some are poverty-stricken. Take the example of a seventy-year-old woman who lives in poverty, has no relatives, is deaf, partly disabled and has a bad bronchial condition. Not long ago, because of illness, she was confined to her apartment and for days had nothing to eat but some cereal.

Thieves and muggers consider the elderly easy prey. As one teen-age gang member put it: "The old people, they won't chase you. And they won't put up a fight. They don't usually have much, but it's easy to get." Indeed, the elderly often are too old, weak or ill to avoid assault or defend themselves. Hence, it is not surprising that at night many of them are afraid to venture outside their homes, apartments or perhaps the single-room occupancy hotels where they reside. For that

matter, many elderly persons have been mugged in broad daylight.

Assaults upon the elderly take many forms. One New York city police official mentioned "scores of rapes and many of them against women in their 70s and 80s."

At times, older persons die of a heart attack from stress undergone during a mugging. But autopsies reveal that many were strangled, bludgeoned or stomped to death.

Does all of this give you cause for concern? Do you have elderly parents, or aged acquaintances? Are they faring well? Do they need your help? How long has it been since you were in touch with them?

### *Care of the Infirm and Ailing*

Some older persons who are in very poor health are being cared for in the homes of their children or other family members. How heartless it would be to place these elderly parents or grandparents in an institution merely to avoid the inconvenience of caring for them at home! Interestingly, the Bible says: "He that is maltreating a father and that chases a mother away is a son acting shamefully and disgracefully." "Listen to your father who caused your birth, and do not despise your mother just because she has grown old."—Prov. 19:26; 23:22.

In certain cases, however, children may believe that it would be considerate to place their ailing elderly parents in a nursing home or other institution. Why? Perhaps because it is felt that there they will receive good professional care that cannot be provided adequately at home.

Naturally, these matters must be decided within the family.

Elderly persons may receive fine care in a nursing home. In some institutions, however, this is not the case. For instance, monetary allowances rightfully due the aged may be withheld. Indifference and neglect may be experienced. That, of course, is not the kind of treatment received from all nursing-home personnel. Far different is the attitude of the administrator who said: "We have two senile ladies who found each other and who spend the entire day together. You know they don't understand a word you're saying to them, but they're so sweet and cute, like children."

If it appears essential to locate a good nursing home for your aged father or mother, visit a number of them. Be sure to see each floor of the institution. Inspect the bathroom, kitchen, dining and physical therapy facilities. Notice the general atmosphere. Ask yourself, Would I be satisfied to live here, if necessary? Consult inspection reports on the home. Also, obtain any federal and state financial benefits due your parent.

#### ***Display Your Concern in Various Ways***

Perhaps your aged parents now are confined in a nursing home. How often do you visit them? As their offspring, you can supply something vital—filial affection. Think about the past. When you were small, how comforting it was to have your mother's loving care, especially when you were ill! And how secure you felt with your father's arm around you! Does it not seem proper that you should visit your confined elderly parents often and give them assurances of your affection and concern?

There are many ways to show your concern for elderly relatives or friends, whether they reside in institutions or their own

homes. For instance, what about writing them cards and letters? Be assured that an unexpected note—warm words of encouragement and love—will be appreciated.

If your aging parents or other elderly acquaintances have a telephone, why not make use of it? Hearing the voice of a good friend or loved one will mean so much to them! Be sure that emergency numbers, as well as your own, are clearly displayed near their telephone. Someday they may need assistance quickly.

Speaking of telephones, why not call your elderly parents or aged friends when you are going to do some shopping? Perhaps you can run an errand for them or pick up things they need. Or, you might invite them to accompany you, if they can. True, this may require extra effort and slow you down a little. But you may have a fine time in company with the elderly.

While it is necessary to respect the right of privacy, you may discern that your aged parents, for instance, are about to take some unwise course financially. Through supersalesmanship, or by some other means, a shrewd commercialist may be trying to take undue advantage of them. Perhaps you can offer them good advice, or can point out where needed information can be obtained. That would be considerate.

#### ***Pleasant Hours Together***

In these days of lawlessness and trouble, visiting the elderly as often as possible would be an excellent way to show your concern for them. Upbuilding and encouraging conversation is likely to benefit them greatly. And suppose they have failing eyesight. Why not spend some time reading to these elderly ones? Perhaps the choice will be an article on the wonders of creation. Mentally, you and your listener may visualize a woodland scene, hear the song of birds or observe the playful antics of young cubs. If such things should lead

to talk about life in the "old days," so much the better. You can become a good listener.

Especially beneficial is the reading of Christian publications and God's Word, the Bible. The Scriptures have something to say even about one's relationship with older friends and relatives. For instance, we are told: "Before gray hair you should rise up, and you must show consideration for the person of an old man." (Lev. 19: 32) According to Jesus Christ, "God said, 'Honor your father and your mother.'" (Matt. 15:4-6) And the Christian apostle Paul admonished: "If any widow has children or grandchildren, let these learn first to practice godly devotion in their own household and to keep paying a due compensation to their parents and grandparents, for this is acceptable in God's sight." —1 Tim. 5:4.

Considering the spiritual side of life, perhaps you can arrange to provide older persons with transportation to and from Christian meetings for Bible discussion. If their condition of health prevents this, you may be able to record some portions of the program and play these later while visiting the infirm. Or, possibly you can outline program highlights verbally. Be assured that such thoughtfulness will be appreciated.

Suppose you have taken your elderly parents to a Christian meeting and you are taking them home after nightfall. You might wait until they are safely in the house or apartment. If they appear at the window, or flash the lights a couple of

*"Gray-headedness is a crown of beauty when it is found in the way of righteousness." "Those who are planted in the house of Jehovah, in the courtyards of our God, they will blossom forth. They will still keep on thriving during gray-headedness, fat and fresh they will continue to be, to tell that Jehovah is upright.*

*He is my Rock, in whom there is no unrighteousness."*

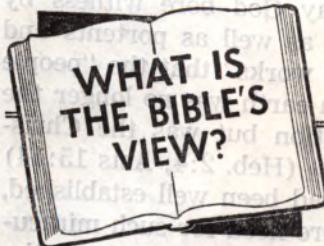

—Prov. 16:31; Ps. 92:13-15.

times as a signal, you will know that they are safe. Better still—maybe you can accompany them to their door.

When visiting the elderly, be observant. Are there dishes to wash? Would it be a fine gesture to sweep the floor? Is there dusting to do? What about the laundry? Of course, you will want to avoid giving the impression that your aged relatives or friends have been negligent. But you can be of great help by caring for matters like these. Do so regularly and reap rich rewards of satisfaction and gratitude.

Why not include elderly ones in some of your own social arrangements? You may be surprised and delighted at their fine remarks and recollections during an evening of quiet conversation. What about inviting your aged parents, for instance, to enjoy a meal in your home from time to time? Certainly this would be a display of thoughtfulness. Do not think that you must spend a lot of money and spread a big feast. There is something much more significant than food. Says the Bible: "Better is a dish of vegetables where there is *love* than a manger-fed bull and hatred along with it." —Prov. 15:17.

You cannot turn back the pages of time. Nor can you restore youthful vigor to the elderly. You are unable to do anything about past anxieties and hardships that already have wearied them. Neither can you lengthen their lives. But you can help to remove any loneliness, despair and sorrow they may be experiencing. Show them genuine, active love and concern. By all means, do it *now*.

## Is Religious "Ecstasy" an Evidence of God's Spirit Today?

"THE sounds just came out as if I had known how to do it all my life," explained a woman who recently began to speak in "tongues." She added: "It was so natural and beautiful. I felt great peace, inner peace and closeness to God. And I cried. You couldn't help but cry, it was so beautiful."

This woman is among hundreds of thousands of "charismatics" who maintain that God's spirit has equipped them with "gifts" (*charis'ma-ta*, Greek) such as healing, prophesying and speaking in unknown tongues. (Compare 1 Corinthians 12:4, 9, 10.) Often such occurrences are attended by feelings of religious "ecstasy," which the *Encyclopædia Britannica* (1974 edition) defines as "the experience of an inner vision of God or of one's relation to or union with the divine."

The powerful emotions accompanying such an "experience" have led many to believe that they have received God's holy spirit. Is

religious ecstasy really an evidence of God's spirit today?

Throughout human history innumerable individuals associated with all types of religious belief have testified to having ecstatic experiences with the supernatural. Experiences like that were common, for example, in ancient pagan "mystery religions" and were viewed as evidence of "rebirth" in a mystic sense. But these experiences, pleasant though they may have been, did not come from God, for the Bible says concerning such religious practices: "The things which the nations sacrifice they sacrifice to demons, and not to God."—1 Cor. 10:20.

The Bible's book of Job records a speech of Eliphaz the Temanite in which he relates the following supernatural religious experience: "A spirit itself went passing over my face; the hair of my flesh began to bristle. . . . a form was in front of my eyes; there was a calm, and I now heard a voice." (Job 4:15, 16) That spirit-induced experience, however, did not originate with God, as is evident from the fact that God rebuked Eliphaz for 'not speaking concerning me what is truthful.'—Job 42:7.

What about today? Could it be that experiences of religious ecstasy that some persons attribute to being "born of the holy spirit" may not come from God after all? Apparently so, for such pleasant feelings may still accompany practices that God disapproves. For example, in his book *Patterns of Prophecy*, author Alan Vaughan says of his going into a "psychic state": "A sort of loving feeling comes often with this, and an inner sense of well-being rises up and exudes what I might call a *charismatic feeling*." But rather than viewing "psychic" abilities as evidence of God's spirit, the Bible associates occult practices such as clairvoyance and precognition with the influence of demons or "wicked spirit forces."—Acts 16:16; Deut. 18:10-12; Eph. 6:12.

Obviously, then, experiences of religious ecstasy or other extraordinary abilities are not in themselves evidence of God's spirit. They may, in fact, come from demonic sources. How, therefore, can a person know whether he really has God's holy spirit?

Evidence of this would appear principally in the way an individual conducts himself from day to day. As the

apostle Paul put it: "You are in harmony, not with the flesh, but with the spirit, if God's spirit truly dwells in you." (Rom. 8:9) The spirit of God becomes the motivating force for fine Christian conduct in opposition to the downward drag of the sinful "flesh." The *Theological Dictionary of the New Testament* compares this idea with Paul's reference, at Romans 7:20, to "the sin dwelling in me."

"The dwelling of sin in man denotes its dominion over him . . . [It] is no passing guest, but by its continuous presence becomes the master of the house . . . Paul can speak in just the same way, however, of the lordship of the Spirit. . . . This 'dwelling' is more than ecstatic rapture."

How can a person subject himself to the "lordship" of God's spirit in his life? Surely not by trying to develop a "Transcendental Feeling" by deliberately ignoring "the messages of the senses," as a book on "mysticism" encourages. The Bible counsels: "Quit being fashioned after this system of things, but be transformed by making your mind over, that you may prove to yourselves the good and acceptable and perfect will of God." (Rom. 12:2) In the same vein we read at Colossians 3:9-11: "Strip off the old personality with its practices, and clothe yourselves with the new personality, which through accurate knowledge is being made new according to the image of the One who created it."

To have God's spirit, therefore, one must first of all 'make the mind over' by means of "accurate knowledge" of what is acceptable to God. That means that a person must make a careful study of the Bible. Then he must become a 'doer of the word,' conforming his life to the godly principles that he has learned.—Jas. 1:22-25.

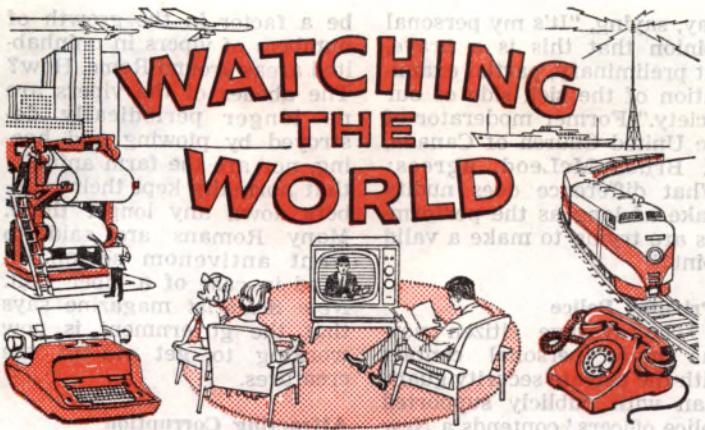

But was not God's spirit upon Christians of the first century made evident by miracles that they were enabled to perform? God did grant special powers to Christians back there. But these served a special pur-

pose. In this way God bore witness by means of "signs as well as portents and various powerful works" that the "people for his name" on earth was no longer the Jewish congregation but was the Christian congregation. (Heb. 2:4; Acts 15:14) Once that fact had been well established, there was no more need for such miraculous powers. They were a feature of the Christian congregation only at its beginning and were to "be done away with." (1 Cor. 13:8) Thus Jesus said that his true followers would be identified, not by feelings of ecstasy or performance of miracles, but by love for one another.—1 Cor. 12:29, 30; 13:2; John 13:35.

God's spirit with its principal fruit of "love" would surely promote unity among true followers of Jesus Christ. (Gal. 5:22; Eph. 4:3-6; 1 John 3:23, 24; 4:12, 13) But persons who look to religious ecstasy or other "experiences" as evidence of God's spirit have often caused further division in an already overly divided Christendom. Commenting on this, evangelical clergyman Donald G. Miller writes in his book *The Authority of the Bible*:

"Pentecostalism claims to rest on experience. Modern tongues movements and healing movements vindicate themselves by experience. Christian Science rests on experience. Where shall the end be? If private experience is the final authority . . . every man will end up doing that which is right in his own eyes. . . . Even where it elicits group assent, it tends finally toward the disintegration of the group into proliferated splinter groups, each of whose special twist of experience demands autonomy."

Religious ecstasy or miraculous "gifts" are not the evidence of God's spirit today. Such experiences may even be related to practices that the Bible condemns. All who wish to be influenced by God's spirit must 'make their minds over' through an accurate knowledge of God's Word and let their deeds reflect the Christian "new personality."—Rom. 12:2; Col. 3:9, 10.

# WATCHING THE WORLD

## School "War Zone"

◆ A new U.S. Senate report says that there is "clear and compelling evidence that violence and vandalism in the schools has reached a level of crisis that demands immediate" action. One senator noted that a survey of hundreds of U.S. schools produced a "ledger of violence confronting our schools that reads like a casualty list from a war zone or a vice squad annual report." The report adds: "Our schools are experiencing . . . brutal assaults on teachers and students as well as rapes, extortions, burglaries, thefts and an unprecedented wave of wanton destruction and vandalism."

## 'What They Want'

◆ After all the evidence and warnings about the hazards of smoking, only two low-tar and low-nicotine cigarette brands now sell among the top twenty. Why? "Full flavor is what people want, and that's what [we are] going to give them," answers one giant tobacco company's chairman. Nearly \$62-million worth of advertising for the two main brands of so-called "full flavor" cigarettes are scheduled to flood over the U.S. public soon in a shift from the former emphasis on low-tar and low-nicotine brands.

## Truly Rehabilitated

◆ *U.S. News & World Report* recently discussed the controversial idea of "furloughing" prison convicts to give them a "trial run" in society before they are freed. Of one such convict, serving a life sentence, it said: "Because of his good record . . . [the prisoner] has been allowed furloughs so often he can't count the number." What has contributed to his "good record"? The article notes that he "has become a devout Jehovah's Witness."

## Common Catechism

◆ The widely discussed *Common Catechism* was produced jointly by 36 noted Catholic and Protestant theologians. Common ground is found between the religions on a number of points, but, "admittedly," it says, "the way to unanimity on certain questions is not yet in sight." However, one point the scholars were unanimous on is that "we can learn virtually nothing" from the Bible on the specifics of sexual morality. Yet the Bible plainly states: "You must not commit adultery" and that neither "fornicators" nor "men who lie with men" will live in God's new order. Is that not specific?

## Tower Tilt Slows

◆ In Italy, Pisa's 177-foot-high twelfth-century tower now

leans about 18 feet from vertical. However, the commission responsible to stop the tilt recently reported that last year's lean was less than that of 1973. The 1974 tilt, though, was greater than the average of the previous ten years. A contest that began in 1972 for ways to stabilize the tower ended last year with none of the fourteen ideas submitted judged to be acceptable.

## Why Priests in Black?

◆ Why do Catholic priests dress in black? One, Andrew Greeley, presents an interesting answer in his U.S. newspaper column: "Take the matter of clerical garb. Do you remember what the significance of black is? It stands for death. The black robes got started with the idea that the good cleric should go through life wearing his own shroud, so that he would never forget about death. Strange way for people to behave who are supposed to preach to others about abundant life and who are called 'celebrants' in some traditions . . . Clothes, of course, do not make the person—nor the religion. They are merely a symptom of a deplorable human tendency to turn good news into bad, life into death, vitality into dullness, and joy into creepiness."

## Outward Appearance

◆ How much effect does one's appearance have on the way others view one? A recent University of Wisconsin study found that college graduates over six feet tall began their careers earning 12.4 percent more than was earned by shorter graduates. Glasses make a difference too. Test subjects at the University of British Columbia were given brief views of the same (unknown to them) persons with and without horn-rimmed glasses. In all but one case they rated the ones with the glasses as more intelligent. And at the University of Mary-

land, subjects reviewed criminal cases along with photographs of the defendants. The unattractive defendants would have received harsher sentences from these "judges."

#### Familiar Surroundings

◆ A long-playing album that records a mother's heartbeat and other sounds from inside her womb is selling briskly in Japan. When it was played on television in both Japan and Britain, parents reported a soothing effect on their newborn babies. The Japanese doctor who developed the recording claims that in his tests the sounds stopped 403 infants from crying in an average of 41 seconds. Over a third went to sleep. The sounds were said to be effective for about the first two months of an infant's life.

#### Tongues of Death

◆ Speaking in tongues is regarded by certain sects as evidence of God's spirit. According to the Bible, there was a time when that was true, and for a purpose. But is the same true today? In a recent notorious murder case, an Englishman reportedly brutally murdered his wife. Court testimony at the trial revealed that last fall the man had begun attending a group where speaking in tongues was practiced. After doing so himself, "within a few days he changed completely" from his former mild manner, reports London's *Daily Express*. The Bible shows that a murderous spirit comes, not from God, but from the Devil.—John 8:44; 1 John 3:10-12.

#### Nudes in Church

◆ Pastor Stuart Coles of Toronto's Bathurst Street United Church viewed a play running in the church's former sanctuary. During the play "eight cast members strip repeatedly and simulate various sex acts," reports the *Calgary Herald*. But pastor Coles approved the

play, saying, "It's my personal opinion that this is a brave, but preliminary, partial examination of the sick side of our society." Former moderator of the United Church of Canada, N. Bruce McLeod, agrees: "What difference does nudity make as long as the performers are trying to make a valid point?"

#### "Private" Police

◆ "The average citizen now has more personal contact with the private security guard than with publicly supported police officers," contends a New York criminal justice researcher. And a U.S. Law Enforcement Assistance Administration official says that "studies have shown there is more money being spent annually on private security than on police."

#### Rising Crime

◆ Crime rose 15 percent in larger cities in the U.S. last year. But, as residents of many of those cities can attest, that is simply an *average* figure. Thus Tulsa, Oklahoma, experienced a staggering 29-percent increase in crime during 1974 over 1973.

#### Two Masters

◆ *The Times Journal* of Manila, in the Philippines, recently interviewed a local Catholic priest about the apparent reconciliation of the local pagan occultism with his church. Monsignor Etruiste of Quiapo Parish House said that his toleration of the people's "serving two masters at the same time" parallels the Church's own attitude. "I myself see these people coming out from their novenas and going straight to the 'manghuhula [fortune-tellers],' " he said, adding: "I myself have a number of books dealing on the occult sciences."

#### Roman Vipers

◆ The migration of Italian farmers to the city is said to

be a factor in the growth of numbers of vipers in uninhabited areas around Rome. How? The abodes of the vipers are no longer periodically destroyed by plowing and hoeing, nor are the farm animals that normally kept their numbers down any longer there. Many Romans are said to want antivenom serum on hand in case of a viper visit. *New Scientist* magazine says that the government is now working to get rid of the creatures.

#### Attracting Corruption

◆ Not all the damage from cigarettes is to one's health. Cigarette smuggling attracts criminals to huge profits with little risk. Why? The marketing director for one of the largest firms says, "Where the cigarettes go after we sell them is somebody else's problem." And *Business Week* reports that this attitude "is one that is commonly shared by most law enforcement agencies, the tobacco companies, and the consumer." Smugglers purchase the cigarettes in tobacco-growing states that have a low cigarette tax and transport them to high-tax states. The difference is said to bring over \$20,000 profit for a truckload.

#### Cancer Costs

◆ It now reportedly costs more than seven billion dollars a year to treat cancer victims in the U.S. This is more than ten times the amount spent on cancer research. There are about 1,300,000 persons with the disease in the nation.

#### Gliding Hazards

◆ Hang gliding is rapidly becoming extremely popular. Fliers, hanging onto kites, ride the air currents. The sport has grown from 200 American devotees in 1972 to 11,000 now, and kites are being sold at the rate of 1,000 per month. At a meeting of the American Orthopaedic Society for Sports

Medicine, Dr. Arthur E. Ellison recently advised of its dangers. The state of California alone averages one death a month. One treatment center there has six paraplegic patients injured by gliding accidents. The doctor suggests that safety controls be established where none now exist.

#### VD 'Rampages'

◆ "Sex diseases," says *The Bulletin of Australia*, are "on the rampage again." The report notes that, according to current research, there are at least 13 sexually transmitted diseases and that their "rate of spread is reaching alarming proportions. . . . Gradually, then very suddenly, the venereal, sex-transmitted diseases gained a foothold. Now they are ravaging the world at an even more alarming rate than in the pre-penicillin era. Gonorrhoea is considered to be

well out of control in several countries."

#### TV and School

◆ A survey of 1,500 Australian pupils from 5 to 12 years of age revealed that "the more they watch [television] the more their progress at school suffers," reports the *West Australian* of Perth. The students spent an average of five hours a day in front of the TV and some were spending up to 11 hours a day. Failure to develop basic reading skills at home and to practice what they were taught in school was said to be a factor in their low achievements.

#### Draft Change

◆ The U.S. Selective Service System's requirement for a man to register for the draft within a month of his eighteenth birthday was abolished on April 1. Now all men born

in a given year will be required to register during just one brief period each year. The dates are to be announced later this year. When the induction system was replaced by the volunteer army, it was feared that many men would either unintentionally or purposely forget to register. However, the Selective Service System director reports that more 18-year-olds registered last year than were believed to be alive.

#### Fallout Status

◆ The United Nations reports that strontium 90 and cesium 137, widely publicized radioactive contaminants from nuclear weapons testing, are at their lowest level in almost 20 years. However, another isotope, iodine 131, which shows up in milk, is on the increase world wide.
