THE REASON FOR THIS MAGAZINE

News sources that are able to keep you awake to the vital issues of our times must be unfettered by censorship and selfish interests. "Awake!" has no fetters. It recognizes facts, faces facts, is free to publish facts. It is not bound by political ties; it is unhampered by traditional creeds. This magazine keeps itself free, that it may speak freely to you. But it does not abuse its freedom. It maintains integrity to truth.

The viewpoint of "Awake!" is not narrow, but is international. "Awake!" has its own correspondents in scores of nations. Its articles are read in many lands, in many languages, by millions of persons.

In every issue "Awake!" presents vital topics on which you should be informed. It features penetrating articles on social conditions and offers sound counsel for meeting the problems of everyday life. Current news from every continent passes in quick review. Attention is focused on activities in the fields of government and commerce about which you should know. Straightforward discussions of religious issues alert you to matters of vital concern. Customs and people in many lands, the marvels of creation, practical sciences and points of human interest are all embraced in its coverage. "Awake!" provides wholesome, instructive reading for every member of the family.

"Awake!" pledges itself to righteous principles, to exposing hidden foes and subtle dangers, to championing freedom for all, to comforting mourners and strengthening those disheartened by the failures of a delinquent world, reflecting sure hope for the establishment of God's righteous new order in this generation.

Get acquainted with "Awake!" Keep awake by reading "Awake!"

Number 5

BE WISE -LIVE WITHIN YOUR MEANS

THEY are a young happily married couple, as yet without children and living in one of the nicer sections of New York city. They bought a house, as they thought that paying off a mortgage made more sense than paying rent. Obviously they needed furniture, and they also obtained an auto, both of which were purchased on the installment plan. And then they let themselves be coaxed into buying a large stereophonic set with record player, radio and color TV. Although both of them were working and the husband was holding down two jobs, they were unable to keep up their payments.

They turned to a good friend for counsel and were shown how they could retrench so as to live within their means. This they readily resolved to do. And not just because of their financial problems but also because as Christians they found themselves too busy and too tired to take care of their Christian obligations.

More and more families are overburden-

ing themselves as this couple did. Thus in the United States in the past ten years personal bankruptcies have just about doubled, from 97,750 to nearly 183,000 a year. While a few of these cases doubtless were due to "time and unforeseen occurrence" (such as illness, accident or unemployment), by far the greater number, we are told, were due to "binges of buying on credit." (Eccl. 9:11) As one bankruptcy referee put it: "The growth in the use of consumer credit is behind it all. Merchants and lenders have been pushing credit on people, competing strongly for the credit business."—*U.S. News & World Report*, July 19, 1971.

Causing people to buy beyond their means are such slogans as "Fly now—pay later." But a better slogan is, "Save now—fly later." Yes, this is good advice. Buying for cash is the most economical way to purchase things, as then you do not have to pay high interest rates, which often are as high as 18 percent a year.

What causes families to fall victim to high-pressure salesmen? One factor often is the desire to "keep up with the Joneses." If a man's neighbors buy a new auto or an outdoor swimming pool, then must he also acquire these things? He may think so. But such a course can be folly, if perhaps his neighbors can afford these things but he cannot. Then again, just because his neighbors make the mistake of living

beyond their means is no reason for him to do so, is it?

The problem may be status symbols. Many a family has burdened itself with heavy installment payments because of having bought a fine auto simply because it gave them status in the community. But if one cannot afford it, is not the status symbol a false front? Or it might be a color TV set. Thus it is reported that a teacher at a private school once heard a youngster say to another, "I can't play with you because your folks don't have a color TV!" Imagine it! But where did this child get such a notion? Doubtless from his parents.

Of course, there is also the hedonistic or pleasure principle to consider. No question about there being pleasure in owning fine things, the pride of possession apart from what others may think. There is also a great deal of enjoyment in eating fine food, which pleasure causes not a few to live beyond their means.

All these causes and others that might be cited call to mind the words of wise King Solomon: "Everything [is] vanity and a striving after wind." (Eccl. 1:14) Vanity? Yes, because the added pleasures do not compensate for the added concerns, cares, worries, anxieties. Jesus said, "Never be anxious about the next day," but he who keeps living beyond his means has good reason to be anxious about the next day!—Matt. 6:34.

So learn to be objective, to be governed by reason, not by mere inclination, feeling or sentiment. Learn to distinguish between the things you really need and the luxuries you may want but can do without. Do not get started to feel and coddle the desire for luxury, for in just a short time luxuries have a way of mentally becoming "necessities." It all goes back to inherited human weakness, our inclinations from youth up being toward selfishness

and needing to be redirected.—Gen. 8:21.

In this matter as in every other problem of living the Bible offers good counsel. It warns that a materialistic pursuit is the root of all sorts of injurious things. It also counsels contentment, saying, "We have brought nothing into the world, and neither can we carry anything out. So, having sustenance and covering, we shall be content with these things." (1 Tim. 6:7, 8) The apostle Paul not only preached contentment to his friend Timothy, but also practiced it. He set a fine example, being able to write: "I have learned, in whatever circumstances I am, to be self-sufficient. I know indeed how to be low on provisions, I know indeed how to have an abundance."—Phil. 4:11, 12.

Why was the apostle Paul able to be self-sufficient, content whether he had little or much? Because he had something in his life that was more important than material things, more important than fine food, fine clothing or other fine material possessions. What was that? He had godly devotion or godliness, concerning which he also wrote his friend Timothy: "There is great gain in godliness with contentment." (1 Tim. 6:6, *Revised Standard Version*) Yes, spiritual treasures are a great aid to being self-sufficient and contented with modest things, needed things.

Man was not meant to live on bread alone or for material things alone. (Matt. 4:4) He needs spiritual food, spiritual possessions. So take time to cultivate and to acquire these. Heed Jesus' words, "Keep on, then, seeking first [God's] kingdom and his righteousness." That means take time for reading and studying God's Word; take time for talking with God in prayer; take time to associate with others who likewise are interested in spiritual things. Get a balanced view of things and you will not be tempted to live beyond your means.—Matt. 6:33.

Where is THE UNITED NATIONS heading?

EACH year on October 24 the United Nations celebrates its anniversary. At that time a special concert is performed in its General Assembly hall. One particular piece of music occasionally used is the powerful choral section of Beethoven's Ninth Symphony. Evidently, the words of this music about the brotherhood of man are felt to be in keeping with the spirit and purpose of the United Nations.

Yet today, after twenty-six years of U.N. existence, do we see the words "All men shall be brothers," which have been sung so movingly, practiced by the member nations? Has that very General Assembly hall where this noble expression was sung been the scene of much unity during the many meetings of the United Nations?

On the contrary, in recent years the world has witnessed some very stormy sessions in the imposing U.N. buildings in midtown Manhattan. This has caused a growing number of thinking people to entertain serious doubts about the future of the U.N. They have become disillusioned with it. Perhaps you are one of these persons.

On the other hand, there are some who feel that the problems besetting the U.N. could be overcome if changes were made in it. What do you think?

Will Changes Help?

Cyrus R. Vance, former United States ambassador at the Paris peace talks, said

recently: "We are definitely entering into a new phase in the history of the United Nations. This is an absolutely critical time to try to make of the organization what it must be if this is going to be the kind of world it should be."

Are changes in the U.N. the answer? Consider the one that was made during the Korean War in the early 1950's. At that time a resolution was passed that made a two-thirds vote in the General Assembly enough to override a veto by one of the members of the influential Security Council. It was believed that this modification in procedure would curtail any attempt by a Security Council member to hinder the peacemaking efforts of the United Nations.

Actually, this change was not drastic enough, as subsequent history has proved. In a crisis it was found that a two-thirds vote usually could not be mustered to overrule a veto. The influence of a larger nation in the Security Council has a great effect on how members of the General Assembly vote.

Efforts to resolve the recent India-Pakistani crisis were hampered by the veto in the Security Council. This caused the Pakistani Foreign Minister to cry out during a session of this council: "We have been frustrated by the veto. Let's build a monument for the veto. Let's build a monument for impotence and incapacity."

Well, is there any hope that real changes will be made to improve the U.N.? What does the past record show? In 1966

an editorial in the Washington, D.C., publication *Human Events* warned that "only drastic reform will save [the United Nations] from the fate of the League of Nations [which failed in 1939]." In 1970 that call was still going out, for the New York *Times* published an article entitled "A Call for U.N. Reform." It asked for a consideration of "how [the United Nations] can best be dismantled and reconstituted."

Additionally, the comments made by this same newspaper at the close of the U.N.'s twenty-sixth session last December are not very hopeful. "There was no one at the end of the session who could honestly say that a promising new start had been made. . . . There was a strong feeling that the United Nations would go on, as it has in the past, busily attending to secondary issues but paralyzed or ignored by the big powers when big questions are involved."

Why are more significant changes not being made? J. Russell Wiggins, former U.S. ambassador to the United Nations, answers: "Efforts to change the system would create ever bigger problems." Obviously the United Nations is not improving. Instead, to many it appears to be headed for disintegration.

What About Its Achievements?

In the field of specialized services the United Nations has made some notable contributions. Education, health, aid to the poor, development of agriculture and industry are among these.

But these accomplishments, when compared to the magnitude of the world's problems, pale into insignificance. Poverty, disease and hunger may have been attacked, but they are far from being vanquished. In 1965, the *Saturday Review*

magazine bemoaned the fact that the U.N. "is having trouble bridging the moat that separates the 'have' from the 'have-not' nations. Sadly, the moat grows wider every day." And if you review last year's press reports about famine, poverty and disease riddling India, Pakistan and certain African nations, you could say that that moat still is not being bridged.

There are those who claim that a great achievement of the U.N. is that it has prevented a major war from breaking out. This is because the U.N. provides a place for men to talk things over. And, as Winston Churchill once said, "Jaw-jaw is better than war-war." While this might sound reasonable, former Secretary-General U Thant once warned that the United Nations was headed toward becoming "merely a debating forum, and nothing else."

A realistic view of the world's history of the past twenty-six years of U.N. existence shows that all too often there were times when war was felt to be better and more effective than debate. Member nations in different parts of the world marched off to the battlefield rather than to the conference table. In fact, since 1945, the year the United Nations was born, it is estimated that some fifty-five wars have been fought, including the third largest in United States history.

Also sobering is the fact that since then, according to one source, over three hundred revolutions, uprisings, coups, rebellions and insurrections have taken place world wide. Much more is needed than just discussion.

How Effective Are Its Sessions?

Mitchell Sharp, Canada's Secretary of State for external affairs, complained about the tremendous amount of speech-making that goes on in the U.N. He said

that the organization was drowning in a sea of words.

A former prime minister of Canada, Lester Pearson, agreed, and added that the United Nations is "suffocating in its own documents." Does this sound as if its sessions are effective?

How all this can hamper efforts to resolve a crisis was demonstrated at the sessions held to consider the India-Pakistani war. Pakistani delegate Zulfikar Ali Bhutto said: "The Security Council, I am afraid, has excelled in the art of filibustering. With some cynicism I watched yesterday a full hour wasted on whether the members would be ready to meet at 9:30 A.M. or bed and breakfast required that they should meet at 11 A.M." During this time hundreds of persons were dying in war.

A little over a week before this, a sharp dispute broke out that caused a meeting of the U.N. to be adjourned. A delegate shouted and shook his fist menacingly at the Undersecretary-General, demanding the right to speak before another delegate who was to give a report. They had to be separated before blows were struck. Certainly, incidents like this do not generate respect and confidence in this world body.

Financial Woes

The United Nations' 1971 budget was about 950 million dollars. But it was unable to meet it. According to one report, the world body is 189 million dollars in debt. Now with Nationalist China expelled, the situation has not improved, for its debt of thirty million dollars is unlikely to be paid by the incoming Chinese Communists. Furthermore, the number of nonpayers and slow payers is increasing among the 132 member nations.

Recently, there have been times when

the U.N. has had to borrow from trust funds or special accounts just to meet staff salaries. Compounding the financial problems are those nations that refuse to pay for certain actions that they did not agree with. These feel no obligation to back up financially something they voted against. If these financial problems continue, the U.N. is headed for economic disaster.

Where Is It Really Heading?

The situation in which the United Nations finds itself today is bleak. There is little hope for its betterment. As one writer observed, "So long as the U.N. is composed of men with the limitations inherent in the human mind, it will talk peace and prepare for war."

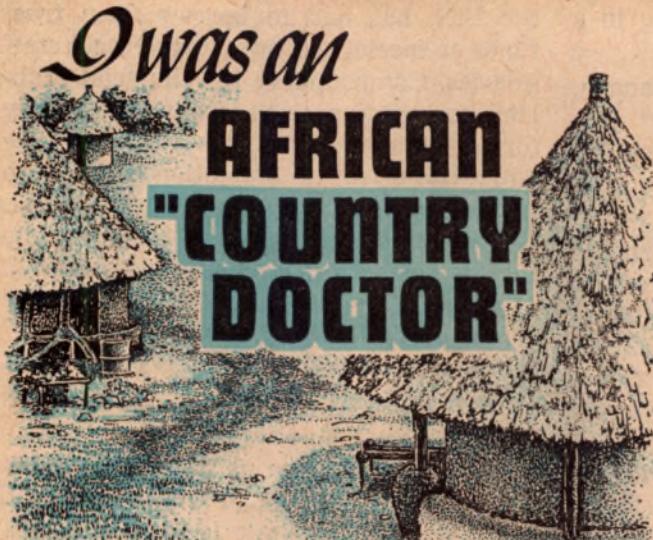

The late Adlai Stevenson described the problem in this way: "The central question is whether the wonderfully diverse and gifted assembly of human beings on this earth really knows how to run a civilization." The answer is obviously No.

Why is this so? Because Jehovah God did not create man with ability to govern his kind. He needs God to do that for him. That is why man's attempts to do it are running into so many difficulties. And this also helps us to appreciate where the U.N. is really heading and why!

In the eyes of God, the U.N. represents this world's defiance of him and the heavenly government he has established to rule this earth, his kingdom by Christ. The U.N. thus attempts to do what God alone can and will do, namely, bring true brotherhood, permanent peace and security to this earth. Because of its defiance of him, it is headed for destruction at his hands.

—Matt. 24:15; Rev. 17:8-11.

What will you do? Where will you place your confidence? Your decision involves your life.

AS TOLD TO "AWAKE!" CORRESPONDENT IN LIBERIA

AN AFRICAN "country doctor" is no ordinary doctor. I know because I was one of them.

Persons would come to me because they sought revenge on real or imagined enemies. I would determine the punishment and administer it by magical means. I specialized in divination and made "medicines" to protect one from "departed spirits" or those seeking to bring evil upon a person.

Years before I took up the practice of divination, I became a regular attender at one of Christendom's churches and later went to a religious mission school. Why? Well, in my early teens my uncle took me to a church in Monrovia. He explained that those who did not go to church would go to hellfire, where first the fingertips would burn, then one arm, then the other arm, the other limbs, and finally the whole body. When finished, God would so fix it that the burning would start all over again, to be repeated to time indefinite, he said.

I was afraid of burning. So, along with so many others, I went to church. But

church attendance did not change me very much. My real religion was still the worship of the "spirits" of my ancestors.

The efforts of my church to get me to stop worshiping the "spirits" failed. Why? The church did not teach that the dead were not alive to receive such worship. No, the church said otherwise. I was taught that each person possessed an immortal soul that survived the death of the body. This only strengthened my belief that my ancestors were alive and needed to be appeased. My non-Christian relatives, I reasoned, were not far from the truth after all.

I Learn How to Be a "Country Doctor"

Unfortunately I could not read the Bible for myself to see just what it said about God and his ways. Not until I was twenty years old did my guardian yield to years of pleading and send me to school. After three years, I was compelled to accompany my ailing guardian to the chief "medicine" town in my country. There I took a course in "country medicine." This included the art of preparing and administering poisons made from the bark of trees, leaves or the gall of alligators. This knowledge was essential to the work of a "country doctor" whose patrons sought revenge on enemies.

Having heard a complaint, a "country doctor" determines if punishment is merited and to what degree. Learning how to become such a "doctor" did not bother my conscience, despite years of church attendance. I believed that God not only allowed the "country doctor" to do his work of administering revenge but also empowered him to do so.

Divining was another requirement in mastering my craft. Methods of divining included looking at the water in a pot or at a mirror. For protection against departed spirits or evil persons, I learned to concoct various "medicines." Often such would be put in a bottle and buried in the threshold of a house, with just the top of the bottle showing.

One day all my possessions were burned up when fire gutted the village. My depression turned to astonishment when I was told that this was a sign from the spirits that I would receive more power. The next day the chief practitioner gave me a ring and confided to me: "If you put this on your finger and start rubbing it, you will be invisible to anyone standing by. Here are the laws of the ring: Don't look at the sun when it is noon; don't eat onion!"

The first time I tried rubbing the ring, people passed me by as if I were not there. But the second time I was greatly disappointed. My confidant explained: "It cannot work all the time, but it is a quick way of making money. I will show you how to do it." Thereafter I would supply rings at a price to make one invisible, rings for ambitious men seeking power and position.

On one occasion, I made a ring for a clan chief, and he paid me \$32, convinced that it had made him invisible and that he would be empowered as chief to time indefinite. But on an occasion when the ring did not seem to work for him, I simply told him that the spirit of the ring was temporarily visiting other parts of the earth.

Uncertainty and Confusion

When I was twenty-four years old, I decided that I wanted to return to school. My parents mocked the idea, but I was not to be put off. I enrolled at a religious

mission school, and although the students, mere children, laughed at me, the teacher gave me encouragement: "Try your best. I was big like you and went to school. Now I am teaching you."

During Bible class I was told: "It is wrong to punish anyone for his wrongdoing to you, or to harm him with country medicine." Defending my conviction that the "country doctor" was actually God's means for returning evil for evil, I countered: "Since God punishes people when they wrong him, then we are only following his example and punishing people when they wrong us." But the teacher maintained: "We are not to do it. That is for God to do." Nevertheless, I reasoned to myself that if that were true, then why did God make the "medicine" work? This was not explained.

But my uncertainty turned to confusion when I tried to reason out the Trinity teaching. In reply to my query as to how three gods could exist in one, I was told that I could not understand this mystery. Unsatisfied, I asked how it was possible for the "Father" to understand it but not the rest of us. "You will get your answer tomorrow," was the reply. But on the next day I was simply punished and threatened with dismissal if I asked any more such questions.

I was taught in the mission school that war was not wrong, for Christians had defended themselves in the past and must continue to do so. From what I learned at this school God takes sides in fights and contests, and for that reason we were urged to pray to win in a football match. And when we did win we rejoiced, convinced that God had been on our side.

During those years I continued to sacrifice to my "medicines" by rubbing them with the blood of a victim, usually a chicken. I attended church services, yet I trusted in "medicines" and magic. Despite

years of church instruction, I still thought that there was nothing like "African science" practiced by the "country doctor" for dealing with the problems of life.

At Last the Truth

In 1956 I obtained literature from one of Jehovah's Christian witnesses at Voinjama. Therein I read that the practice of spiritism, which includes divination, magic, sorcery and binding others with a spell, is wrong according to Deuteronomy 18:10-12 and Revelation 21:8. For a further explanation I went to see this Witness. It was made clear to me that my relying on "medicines" was spiritism and condemned by the Bible. God, I learned from the Bible, was opposed to all forms of divination and magic. The next words of the Witness startled me: 'All who continue to practice such things will not survive "the war of the great day of God the Almighty," called Armageddon, nor will they live in the glorious new system of things!'—Rev. 16:14, 16.

This Witness then gave me answers from the Bible to many other questions I had. I began to see for the first time that "the god of this system of things" is Satan the Devil and that even the so-called Christian churches had come under his influence. (2 Cor. 4:4) The real truth lay in the Bible. I needed to make a study of it to get free from Satan's snares. I had really been serving the Devil and his demon angels.—Rev. 12:7-9.

The shock of all this—that as a "country doctor" I had been misled by the Devil—was so great that I could scarcely think of anything else for the next two weeks. At the end of that time I had made my choice. Early one morning before day-break, I gathered all my "medicines" and my prized magical ring. After packing them all into a bag, I dumped it into the river. No one was around, but I knew that

the true God, Jehovah, was observing.
—Prov. 15:3.

As for the church systems, I was furious that I had been deceived into superstition and demonism by their false doctrine that man possessed an immortal soul. This false doctrine was the basis of my foolish fears of departed spirits. (Ezek. 18:4) And how glad I was to learn that the Bible does not teach the mysterious Trinity! From the Bible I could now see that Jehovah is one God, that Jesus Christ is truly his Son and that the holy spirit is God's invisible active force.—1 Cor. 8:6; Matt. 16:16, 17; Acts 1:8; 2:2-4, 16, 17.

Arrangements were made for a Witness to come to my village and study the Bible with me. This provided the accurate knowledge needed to make my dedication to Jehovah. I chose to follow the fine example of Joshua: "As for me and my household, we shall serve Jehovah." —Josh. 24:15.

Serving the True God for Life

When news got around that I had made a break with magic and all forms of spiritism, I was summoned to the entrance of the local secret society "bush." Thereupon the chief "country doctor" or *zo* asked me: "Are you the one who has said that you have no more time for *Poro* and *Sande* [native secret societies] and you have dumped all your medicines into the water?"

"Yes," I replied.

"Are you not afraid of all the gathering here, and to admit to us these things?"

To this I replied: "I will not allow fear of you to cause me to do what is wrong before the living God Jehovah!"

"Go and be for your Jehovah," thundered the *zo*, "but you will know who we are!" This was clearly an intimation that I could expect to be poisoned by "country medicine." Turning from them and walk-

ing straight ahead, I sought protection from Jehovah through prayer.

No calamity befell me. But later my uncle, the head of our family, officially disowned me with the words: "Any good that comes to you, don't bring it to me, and any bad that comes to you, keep it for yourself!" Despite such opposition, I treated my relatives kindly, for I knew that serving Jehovah meant living up to the high principles found in his Word the Bible.

No longer being a "country doctor," I found work as a cleaner of tractor parts for a very low wage. The man in charge soon observed that I would be working while others slipped away. One day the man in charge was drunk at the time a truckload of parts arrived. So I received the shipment for him, checking to be sure that all the parts were there. My co-workers ridiculed me for doing this job without pay. But the man in charge appreciated my saving him his job, and within a short time I was earning five times my original wages.

Though doing my secular work well brought satisfaction, I knew I would have even more satisfaction if I could spend more time in preaching Bible truths to others. So my wife and I agreed that after a Christian convention to be held at Gbarnga, I would enter the full-time preaching work. I left my job and brought all my possessions and savings with my wife and young son to the assembly. Unexpectedly soldiers disrupted the assembly and tested our faith on the matter of rendering a religious salute to a secular standard. For three days and three nights we were not given any food and water, as we were confined in an open field. After our

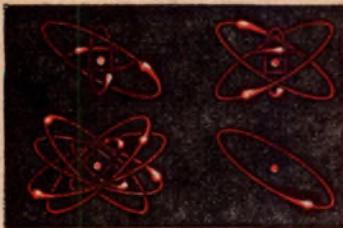

release we found that every possession we owned had been stolen. But a number of my Christian brothers gave me some money, so I could return to my home. The first night at home I hunted and killed two deer and a porcupine. For the rest of the year I supported my family in this way.

Finally in 1964 I realized my heart's desire to serve Jehovah as fully as possible. At that time I became a full-time proclaimer of God's kingdom. Jehovah has wonderfully provided for us, and I am continuing in my chosen service even though my children now number six.

During the years I have had the joy of seeing my niece and one of my uncles accept the Bible truth, and other family members are now interested. An opportunity came to demonstrate Christian love when my oldest brother became sick and was taken to our town for treatment. He did not come to stay in my house because he had strongly opposed my serving Jehovah. Yet I went to him and brought him to my home, gave him food and treated him as well as I could. After a time others of the family came, saying: "Your way of serving God is very nice. We never knew it would be like that. You did not turn against us, but you have shown us consideration and respect in return for contempt."

How different the ways of true Christianity from the ways of the African "country doctor"! Instead of returning evil for evil, I do as the Bible says: "Keep conquering the evil with the good." (Rom. 12:17-21) How happy I am that I abandoned African "country medicine" and Christendom's false religion and have come out of darkness into the glorious light to serve Jehovah!

THE BUILDING BLOCKS *of Creation*

LOOK around you on this earth. What can you see? No one can fail to be moved by the sublime beauty of the hills and mountains, by the fascinating colors and shapes of the plants and trees and by the delightful abilities of the animals, birds and insects. The very complexity of creation just staggers the imagination.

Do you ever wonder from what all this profusion of beautiful and awe-inspiring things comes? What are the building blocks of creation? How are these building blocks assembled to produce the innumerable material things all around us? When we look at the multitude of marvelous creations, we see a seemingly solid world. Would it surprise you to know that all this is constructed from basic building blocks that are themselves 99.9 percent nothingness or emptiness?

For thousands of years man has tried to unravel the secret of what exactly it is that constitutes matter. The dictionary defines matter as "that out of which anything is made." But from what is it made? It has only been in this century, indeed only in the last thirty or forty years, that scientists have really begun to understand the fundamental nature of material things. Now researchers tell us that all material things, whether they be the rocks, plants, animals, rivers or anything else that we can become acquainted with by using our bodily senses, are built up from building blocks that are themselves made from three basic particles.

These three basic particles, depending on the number of each present in the build-

ing block, determine the nature and properties of each block or "atom" that they form.*

First, though, let us get our definitions straight. By "atom" we mean "the smallest particle of an element," and an "element" has been defined as "a substance that cannot be resolved by chemical means into simpler substances." For instance, if we could take a sample of the element we know as gold and keep on dividing it into smaller and smaller pieces, it would eventually be impossible to divide it further without its losing its original chemical identity. This smallest portion is the atom. Any further division would be a splitting of the atom into the aforementioned parts, called protons, neutrons and electrons.

The protons and the neutrons are about equal in weight, the difference in these being that, whereas the proton carries a positive charge of electricity, the neutron has no charge, hence is neutral. Relatively speaking, the protons and neutrons are huge compared to the electrons, having a mass about 2,000 times as great. The tiny electrons carry a negative charge of electricity, and since they always equal in number the protons, then the atom is a neutral body.

These three fundamental particles are built up in increasing numbers to form the atoms of the different elements, or the building blocks of creation. How many are there? For a long time it was thought

* Scientists have actually identified more than thirty atomic particles, but the ones mentioned above are the ones that determine the nature and properties of the element they form.

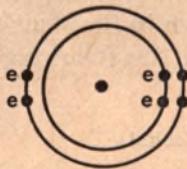

that there were merely four elements; namely, air, fire, earth and water, but as knowledge increased, different elements were gradually identified. Now lists of the elements show over one hundred, some of them being man-made, artificial and unstable.

What, though, about this 99.9 percent nothingness? If we could see a single atom of any of the marvelous things around us, what would it look like? What kind of structure would it be?

Atomic Structure

All atoms have a central nucleus composed of a combination of protons and neutrons, surrounded by orbiting electrons. The only exception to this is the atom of the simplest element, hydrogen, which has only a single proton as its nucleus with one single electron in orbit around it.

Thus we get a mental picture of a sort of miniature solar system, with the electrons in comparatively large orbits around the small, compact nucleus, much as the planets move in orbit around the sun. This microscopic planetary system is different for each of the elements and is reproduced in each of the atoms of that element. What power and precision produced all that? Take, for example, an atom of the element carbon, as portrayed in the following schematic diagram:

Carbon atom has a nucleus with 6 protons and 6 neutrons, and has 6 electrons, two in the inner shell and four in the outer

Of course, we cannot see a single atom because an atom is so infinitesimally small. Each of these minute 'planetary systems' would measure a mere one hundred millionth of an inch in diameter! And the central nucleus or 'sun' would be only

about one hundred thousandth the size of the entire atom in diameter!

Since the number of electrons in the atom can vary from one to over a hundred, depending on which element is under consideration, it is awesome, is it not, to consider the wonderfully intricate arrangement within the incredibly small space of each atom?

It is fascinating to realize that all the material things, all the seemingly solid things, from the green grass to the cow's tail to the mountains, are made up of millions upon millions of these tiny atoms, each of which is itself predominantly emptiness and space between the central nucleus and the orbiting electrons. Yes, an atom is mostly empty space. Thus the Life Science Library volume *Matter* says: "If each atom were collapsed into a sphere no bigger than its own core, or nucleus, then all the bulk of the Washington Monument [555 feet high] could be crammed into a space smaller than the eraser on a pencil."

The electrons in each atom orbit in what are referred to as "electron shells," each "shell" being a set distance from the nucleus. As the atoms get progressively more complex by the addition of more of the basic particles, the additional electrons orbit in these "shells."

For instance, the illustration of the carbon atom depicts it with two electrons in its inner shell and four in its next shell. An aluminum atom would have two electrons in its first shell, eight in its next shell and three in its outermost shell. In other words there is not an unruly mass of electrons without any fixed pattern but rather a very orderly arrangement in all this.

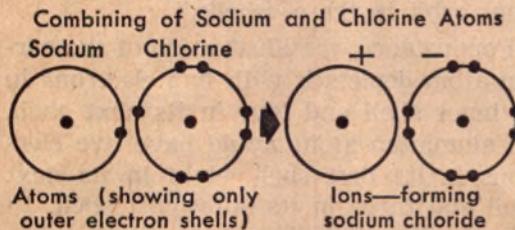

Since we are interested in how these building blocks are assembled to produce all the wonderful things that delight us so much, then we are particularly inter-

ested in these minute particles, the electrons. How so? Because it is the arrangement of these electrons in their orbits that determines the combining abilities of each atom. This combining ability is called "valence" or "valency."

Combining by Borrowing Electrons

As research into the atom progressed, it was found that any element with a complete number of electrons (usually eight) in its valence ring (borrowing-and-lending shell) was extremely stable; that is, it did not readily combine with other atoms. These stable or inert elements are known as the rare gases—helium, neon, argon, krypton, xenon and radon.

Gradually a picture of the electron shells of all the elements was built up. It was found that atoms tended to try to make up a stable outer electron shell. The valence theory explains this by showing how the atoms do this either by borrowing and lending electrons, or by sharing electrons with other atoms. An element that has seven electrons in its outer shell, such as chlorine, will borrow an electron from an element that has one electron in its outer shell, like sodium, for instance. Look at the following diagram to see how this would happen:

Sodium, a soft, silver-white metal, which was discovered in 1807, is a very active element that reacts violently with water. It has a total of eleven electrons, the shells having two, eight and one electrons respectively. Chlorine, discovered in 1774, is a greenish-yellow gas. It has been used

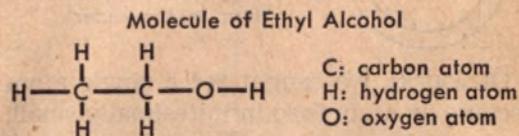

as a bleach, a disinfectant and also as a poison gas. The chlorine atom has seventeen electrons, its shells containing two, eight and seven respectively. Showing only the outermost electron shell, the diagram depicts how these building blocks combine and what results from this combination.

The chlorine atom borrows an electron from the sodium atom, becoming negatively charged in the process by the addition of this extra electron, while, vice versa, the sodium atom becomes positively charged. These charged atoms, now called "ions," are attracted to each other because of their opposite charges, and they cling together to form the compound known as sodium chloride, or common salt.

From two seemingly unlikely building blocks with their own distinctive properties we get the common salt so vital for life. This rearrangement with regard to only one electron builds a completely new substance! A combination like this is called an electrovalent bond.

Combining by Sharing Electrons

Another kind of combination is called a covalent bond. In this kind of bond the various atoms share electrons to form the required stable outer electron shells. An example of this is when two carbon atoms, six hydrogen atoms and one oxygen atom combine to form a molecule of ethyl alcohol, the intoxicating ingredient of many beverages. The covalent bonds of each pair of shared electrons are shown in the structural formula by a dash in the following diagram:

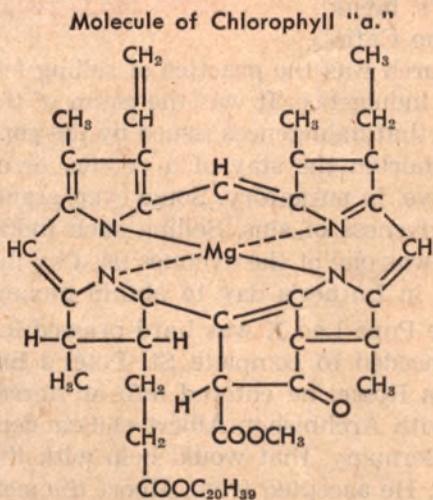

By thus sharing pairs of electrons the carbon atoms and the oxygen atom acquire a stable outer shell of eight elec-

trons, while the hydrogen atoms acquire outer electron shells with two electrons.

More Complex Interaction

Of course, the interaction and attraction between the different atoms become very much more complicated as the far more complex molecules that go to make up the organic compounds, those having carbon in their molecules, are formed. An example of one of these organic substances serves to illustrate this. Here is a diagram showing the structural formula of a molecule of that amazing substance called chlorophyll:

H: hydrogen atom (72)
C: carbon atom (55)
O: oxygen atom (5)
N: nitrogen atom (4)
Mg: magnesium atom (1)

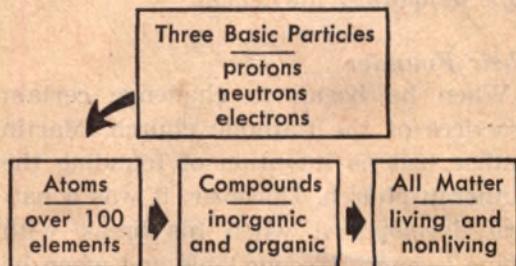

Just think of it: Here are 72 atoms of hydrogen, 55 atoms of carbon, 5 atoms of oxygen, 4 atoms of nitrogen and 1 atom of magnesium, some of them already combined into prefabricated units, as it were, built up into one molecule of chlorophyll, one of the most important pigments in vegetation. This is the substance that accounts for the greenness in the country-

side and that gives the plants the wonderful ability to convert the radiant energy of the sun into chemical energy for the plants to use.

Can you imagine the incredible interaction among the electrons as they whirl in their orbits to link the various atoms so as to make up even one molecule of chlorophyll? When one considers that it would take millions upon millions of such molecules to cover the period at the end of this sentence, one's admiration for the Designer of such an arrangement can only grow and deepen.

Scientists have only begun to unravel the facts with regard to how and why the different building blocks combine, but they do know that there are fixed and orderly laws that govern these combinations. They stand in awe at the inconceivably intricate way in which the tremendously complex living cells of all forms of life build up these already complicated substances into the abundance of living things on the earth.

This buildup from imperceptibly small atoms to all the magnificent handiwork of creation is set out in the following diagram:

Look around you, and reflect on the wisdom and intelligence that has masterminded the production of all the material things we know, from the tiniest seed to the limitless universe—and all from building blocks that are themselves 99.9 percent nothing.

A look at

MARTIN LUTHER

FOR the past five years or more, talks have been in progress between Lutheran and Catholic theologians. The ultimate aim apparently is to bring Lutherans back into the Catholic church. Although some individual Lutherans may not relish this thought, others do.

In fact, even Luther would probably look upon such efforts with an approving eye, despite his polemics against the pope. He was a devout monk who had no desire to break with the Catholic church. Instead he wanted to see it institute reforms that would correct practices he sincerely believed to be unchristian.

According to Dr. Carl Braaten of Chicago's Lutheran School of Theology, a reunion with the Catholic church would be in accord with Luther's wishes. "The Reformation," he said, "was always meant to be a temporary movement."

Their Founder

When he began to challenge certain practices of the Catholic church, Martin Luther had no intention of founding the Lutheran church. However, it was a natural development when his break with Rome became irreconcilable and when he concluded that the church should be reformed wherever possible in Germany despite pope and emperor.

The name "Lutheran" was first applied to Luther's followers by his enemies. Although it was meant as a derogatory term, they adopted it.

What led to Luther's break with the Catholic church was the practice of selling letters of indulgence. It was the claim of the church that indulgences issued by the pope could shorten the stay of a person, or of a relative, in purgatory. Some even granted forgiveness of sins. Selling such indulgences was one of the avenues used by the church in Luther's day to obtain money.

Since Pope Leo X was hard pressed for funds needed to complete St. Peter's Basilica in Rome, he entered into an agreement with Archbishop Albert of Brandenburg, Germany, that would help with the project. He accepted from Albert the sum of 10,000 ducats in return for the archbishopric of Mainz. That Albert might pay back the sum to the financial house of Fugger, from whom he borrowed it, the pope granted him the privilege of dispensing an indulgence in his territories for a period of eight years. Half of the money received would go to the pope and the other half to the house of Fugger as repayment on the loan.

The Dominican monk Tetzel was entrusted with the sale of these indulgences. He and his fellow vendors made extravagant claims in their sales pitch. Among

other things they would say: "As soon as the coin in the coffer rings, the soul from purgatory springs."

Luther was infuriated by such claims. He contended that the granting of indulgences without repentance was contrary to Christian doctrine. He argued: "Indulgences are most pernicious because they introduce complacency and thereby imperil salvation." In one of his sermons in 1516 C.E. he said: "To assert that the pope can deliver souls from purgatory is audacious. If he can do so, then he is cruel not to release them all."

On October 31, 1517, Luther nailed ninety-five theses regarding indulgences on the church door at Wittenberg, Germany. This was the practice in his day for publishing a challenge for a debate. No one accepted his challenge and no discussion of the subject with church officials ever occurred.

Thesis number five said: "The Pope has neither the will nor the power to remit any penalties, except those which he has imposed by his own authority, or by that of the canons." Thesis number twenty-one stated: "Thus those preachers of indulgences are in error who say that, by the indulgences of the Pope, a man is loosed and saved from all punishment."

By thus challenging the church's practice of selling indulgences, Luther unwittingly launched himself on the road to separation from the Catholic church and struck the spark that ignited the Reformation. His theses were translated from Latin to German and printed by some of those who read them. They became a common topic of conversation throughout Germany.

Emphasis on Scriptures

The more carefully Luther studied the Scriptures the more he found things in them that were in conflict with the Cath-

olic church. The Scriptural statement, for example, that a man is declared righteous or justified by faith made a deep impression on him. (Rom. 3:28) He could not reconcile it with the teaching of the church that a person can gain religious merit by venerating certain relics.

In his famous debate with the Catholic theologian Johann Eck, Luther stressed his respect for the Scriptures as a guiding authority by saying: "A simple layman armed with Scripture is to be believed above a pope or a council without it."

When he discovered that no mention of purgatory occurs in the Scriptures, he ceased to maintain that doctrine. But he did retain the unscriptural doctrine of hell as being a place of eternal torment for immortal souls. Instead of teaching that the human soul is immortal, the Bible plainly states that it dies (Ezek. 18:4), and instead of saying that the wages sin pays is eternal torment in hell, it says that the "wages sin pays is death."—Rom. 6:23.

The Hebrew and Greek words, *sheol* and *hades*, that have been translated as hell in some versions of the Bible mean the common grave of mankind. For example, faithful Job says, according to the Catholic *Douay Version*: "Who will grant me this, that thou mayst protect me in hell, and hide me until thy wrath pass, and appoint me a time when thou wilt remember me?" (Job 14:13) Obviously, Job is speaking about being hidden, not in a place of torment, but in the grave until the resurrection. There are Bible versions that use the word "grave" here instead of "hell." Despite this Scriptural truth, Lutherans to this day hold to the Catholic doctrine of eternal torment in hell.

When Luther appeared before Emperor Charles V and the Diet at Worms, Germany, which was an assembly of princes

and representatives from the free cities, no argument was presented to prove his views unscriptural. There was actually no discussion, but only a demand that he recant. In his reply he again appealed to the Scriptures as supreme authority by saying: "Since then Your Majesty and your lordships desire a simple reply, I will answer without horns and without teeth. Unless I am convicted by Scripture and plain reason—I do not accept the authority of popes and councils, for they have contradicted each other—my conscience is captive to the Word of God. I cannot and I will not recant anything, for to go against conscience is neither right nor safe."

Excommunication

On June 16, 1520, Pope Leo X issued a bull condemning Luther. It listed forty-one propositions from Luther's writings that were declared to be false, dangerous or heretical. If he did not recant, the secular authorities were to seize him and deliver him to the pope. He then would no doubt have been treated as was the Bohemian John Huss, who was burned alive at a stake.

But the secular authorities where Luther was located were sympathetic to him and declined to take action. Their sense of justice was outraged because Luther was condemned without having been given a hearing and an opportunity to defend himself. The bull actually caused public indignation to burst forth against the arbitrary action of the pope.

In Rome and in some other places Luther's books were publicly burned. In reprisal the faculty and student body at Wittenberg gathered outside the Elster gate of the city and burned the papal constitutions, the canon law and works of scholastic theology. Luther added the

pope's bull of excommunication to the burning pile.

Baptism

Luther indicated a preference for baptism by immersion, because that is what is indicated by the Greek word for it. He said: "I could wish that the baptized should be totally immersed, according to the meaning of the word and the significance of the mystery."

However, Luther also said about immersion that he did not think it is necessary. Thus he indicated that his thinking was influenced by the Catholic practice of sprinkling. This no doubt is the reason why sprinkling is an acceptable practice in Lutheran churches today.

Baptism by immersion, not sprinkling, is the Scriptural method. There is no evidence in the Scriptures that anyone who was baptized in apostolic times was sprinkled. Rather the Scriptures show that they were immersed.—Matt. 3:13-16; Acts 8:36, 38.

Not Far Enough

While some of Luther's views that caused his break with the Catholic church moved him into closer alignment with the Scriptures, he did not go far enough. Many practices and beliefs of the church that are without Scriptural support were carried over into the Lutheran church.

The Catholic doctrine of the Trinity, for example, is still preached in Lutheran churches. This doctrine is in direct conflict with the testimony of the Scriptures and relies upon a twisting of the Scriptures. The claim that God is a trinity of three persons who are coequal and coeternal is nowhere taught in the Bible. Rather than Jesus Christ's being coequal with his Father, we find him speaking of his Father as being greater and as being his God. (John 14:28; Matt. 27:46; John 20:17)

After he returned to heaven he is spoken of as being subject to his Father and his Father as being his head. (1 Cor. 11:3; 15:28) The plain testimony of the Scriptures is that Jesus Christ is the Son of God rather than being God, as is wrongly claimed by the Trinity doctrine.

The Trinity doctrine is only one of many things that have been carried over from the Catholic church to the Lutheran church. The Lutheran clergy have continued to wear the old Mass vestments and carry on the old ceremonial forms of worship. The altar with its candles and crucifix were retained, although such things are without Scriptural support. The use of candles and the cross in worship is actually of pagan origin, as admitted by Cardinal Newman in his book *Essay on the Development of Christian Doctrine*.

Luther failed to perceive from the teachings of the Scriptures that Christians are to be neutral in the political affairs of the world and that they are not to participate in warfare. Jesus told his followers that they were "no part of the world." (John 15:19) He also counseled them against the use of the sword when he said that "all those who take the sword will perish by the sword." (Matt. 26:52) Furthermore, it is written at 2 Corinthians 10:4 that "the weapons of our warfare are not fleshly."

Despite these and other scriptures on these points, as well as the historical record showing that the early Christians did not engage in military warfare, Luther did not disapprove of the use of the sword. He viewed a person who abstained from military service as worthy of a death sentence. When the peasants revolted, he urged the civil authorities to "stab, kill and strangle" them. Is that what Jesus Christ would have done?

Manifesting the same intolerant and violent spirit of the Catholic church, Luther and his followers approved the use of the

sword against the peaceful Anabaptists because they held religious viewpoints different from theirs. Luther's close associate, Melanchthon, argued that even the passive action of the Anabaptists in rejecting government, oaths, private property and marriage outside their faith was seditious and therefore punishable by death. Certainly the Christian Bible writers never advocated that Christians kill anyone who rejected an article of faith.

Since the days of Luther the Lutheran church has been closely allied with the political governments of the world. When these governments have become embroiled in a war, the members of this church have not hesitated to pick up the sword to kill those classed as political enemies by these powers, even when it meant killing fellow Lutherans. This was particularly evident during World War II when German Lutherans in support of the Nazis fought fellow Lutherans in other countries. How contrary this is to true Christianity and to Jesus' statement, "By this all will know that you are my disciples, if you have love among yourselves"! (John 13:35) History makes it clear that Christ's followers in the first century were pursuers of peace, not wielders of the sword.—1 Pet. 3:11.

There can be little doubt that Luther caused a severe shaking of the Catholic church. But the Lutheran church is in reality only an offshoot of the Catholic church, and resembles it in many ways. Although this offshoot instituted some reforms of Catholic teachings, it has not proved to be a restoration of the Christian organization that existed before the great apostasy that followed the death of the apostles. (Acts 20:29, 30) Thus discussions about reuniting the Lutheran church with the Catholic church need be no cause for surprise. There are natural ties between these two churches, and even Luther would doubtless approve their uniting.

RAFAEL entered the hallway and sank into a chair. "We've been recording for hours and I've never had a session like it," he said. "Instead of just sitting down and playing the usual accompaniment, I spent the entire afternoon trying to teach the orchestra how to play mountain music."

"That shouldn't be such a task," I said. "You are all expert guitarists, and folk music is so simple."

"Simple, yes, but have you ever noticed the beat? It's that beat that gets anyone who hasn't been raised in the Peruvian mountains."

"Well, yes, I've noticed that the folk music of Peru is a bit different, but—well, just what is there about the beat?"

"After every few bars there's a bar introduced that gets only a fraction of the normal beat. Now this simply isn't done in music. Any musician knows that a piece of music has just so many bars and each bar a given number of beats, whether it be two, three, four or even more. But not the Peruvian mountain folk music."

"Now, just a minute," I said. "I know a little about music and I do know that each bar has to conform to the timing in order to have rhythm. There's nothing more frustrating than playing or singing a piece of music when each bar is not given full value. Are you telling me that . . . ?"

"That the Peruvian folk music doesn't give all the bars equal value of beats? Yes. Here, I'll demonstrate." With that he hummed a tune with which I was familiar, having heard it many times in my four years of teaching in the interior. As he hummed, I noticed that at every fifth bar he stopped short at just half the number of beats. It sounded delightfully normal—for Peruvian music.

"Don't you remember the kind of dances

THE OFFBEAT MUSIC OF PERU

By "Awake!" correspondent in Peru

they do to this music?" he asked. "Here, I'll refresh your memory." With that Rafael got to his feet, shuffled a few steps while humming the same tune, then stopped short, bringing both feet to a halt in quick succession on the fifth bar, starting in again immediately for the next four bars, only to stop short again on the fifth. How many times I had seen the Indians sing and dance this way! It was fascinating, and so typical. This type of dancing, together with this music—a perfect match.

My mind raced back to the quaint little towns dotting the puna (high, cold, arid plateau) or nestling in the terraced valleys of the Andes. I recalled the scenes of little orchestras at work in the plazas with homemade harps and flutes. Bright, billowing skirts spun into focus revealing sturdy-legged dancers circling opposite their knitted-capped partners. Twirling and stomping to a stop—twirling and stomping to a stop.

Rafael was speaking again. He was explaining that it would be difficult to put this offbeat music into writing, but that nevertheless it was uncomplicated and simple to play. All except the broken bar, that is, for this creates an incredible problem for conventional musicians. Their mental metronome, so to speak, strives to supply the missing beats and equate the rhythm and thus the peculiar offbeat savor of the folkloric music is lost.

Today's Ancient Inca Music

Peru is divided down its long middle by the high Andes mountain range, keeping communication between the mountain population and that of the coastal strip to a minimum in the centuries before modern transportation facilities. The Inca-inspired mountain music therefore has been preserved in its nearly original state. What seemed a rather curious fact was that, whereas this folk music had failed to infiltrate to any degree into the comparatively nearby coast, it nevertheless penetrated a 2,000-mile length of mountains while undergoing only minor changes from one section to another.

These changes have developed into three regional "moods" that have come to be recognized today as characteristic music of the northern, central and southern sections of the Peruvian Andes.

To illustrate, if you were a native of the northern mountains, you would like your music gay and lively, and you would be accustomed to dance to it in fast, jumping steps or in marches. You would have grown to love the violin and the locally made harp, the quena (flutelike instru-

ment made of cane), and the guitar strumming its accompanying rhythm.

But, contrariwise, most certainly if the South were your home, you would sway to the melancholy strains of the mandolin and the accordion, rounded out by the twang of the charango and the extra-heavy beat of the big *guitarrón* as they doled out their sad melodies. Dancing to these mournful ballads, you would be overcome with emotion, tears streaming down your chapped cheeks.

Or if you were raised in the Central Andes region, the land of the saxophones and the clarinets, the harps and the violins, you would delight in the lilting melodies in the popular mood. The distant thumping beat of the *cajon* (homemade drum) would lure you to the public plaza where you would join hands with the circle of dancers or clap rhythmic accompaniment.

The Offbeat

Although the Indians of the mountains have learned to dance to the waltz that has infiltrated from the coast, the waltz rhythm is practically unknown in the composition of this folk music. The popular two or four beats to the bar is generally phrased into groups of several bars in succession followed by an offbeat bar.

Where the broken bar is interjected varies according to the piece and sometimes varies even within one piece of music. One might, for example, have a piece with the first two bars of four beats each and followed by a bar with just one beat, succeeded immediately by the two bars of four, and then the one beat. This would be repeated throughout the whole piece with scant variation of tune. However, what may be lacking in color and creativity is compensated for by their boundless en-

thusiasm as they stomp, clap and shout hour after hour to more of the same.

Emotional Outlet

These Indian folk are outwardly unemotional but their music is capable of deep expression and sentiment. One example of this is the slow and melancholy ballads sung at social gatherings to a music called *El Triste* (the sad one). This is a music for expressing laments and sentimental serenades, and it is the only music where the singer is featured. The soloist, singing in either Spanish or Quechua, is accompanied by a single guitar fingering only the melody. He sings these melancholy tunes with exaggerated sadness, provoking tears of deep emotion in the eyes of all the listeners. It is not uncommon to see little bands of guests grouped around crying freely and unashamedly, a good time being had by all.

Undoubtedly, primitive music is appreciated most by its own natives. But in recent years some orchestral arrangements of this Inca-inspired music have been made for symphony orchestras. Although the offbeat bars have been sacrificed, the prevailing minor tones of the music, played in rich orchestral harmony, are surprisingly beautiful.

Coastal Counterpart of Mountain Folk Music

But if the local flavor of this folk music is captured with difficulty by outsiders, then are we to assume that the criollo music of the coast is normal enough to be easily played by all? No such happy circumstance! Some of the coastal criollo music also has its surprises.

In contrast to the folk music of the mountains that does not make use of $\frac{3}{4}$ time (usually waltz time), the criollo music is full of lilting waltzes in addition to polkas and fox-trots. Though many of

these are delightfully normal, some of these criollo compositions are played and sung with a peculiar syncopation (in which what is ordinarily the weak beat gets the strong beat).

Each "performer" interprets the syncopation with individual style, but always with the distinctly Peruvian flavor, which they say can seldom be duplicated by one not raised here. Interestingly enough, duos, trios, or quartets are able to 'syncopate' in complete unison in this unusual rhythm, accomplished by long hours of practice. This fact is doubly surprising when they sing certain pieces that have a superabundance of words. Crowded into these pieces from start to finish, the volley of words is deftly worked into the syncopated rhythm in a smooth music marathon, leaving the listener breathless.

Change of Mood

with Change of Geography

The waltzes of Lima, the coastal capital city, are lively, the mood kept gay by deftly handled guitars or modern orchestras. If you were to walk down her streets, you would most surely at some time during the day pass a fiesta in someone's patio. More than likely the trumpets would be blaring out a catchy fox-trot. Or they might be accompanying saxophones in a polka or a lilting waltz. But they would be playing these popular Peruvian melodies with their inimitable syncopation.

As you travel on up the northern coast, you will notice that the music grows notably more sentimental. As if to emphasize this mood, the singers have developed a fetching glide to their voices, adding just a touch of melancholy.

With passage of time all this criollo music is conforming to modern touches. But as for the folkloric music of the mountains, several decades of radio diffusion

penetrating into remote corners of the sierra have not even begun to change it.

Many typical scenes of Peru depict the little Indian orchestra with flute and harp making offbeat music for colorful dancing

couples. The multiple billowing skirts of the bronzed wind-chapped señoritas are lifting to a full circle as they are whirling and stomping to a stop—whirling and stomping to a stop.

"We Thought It Was the Police"

THE apostle Paul wrote that "the word of God is alive and exerts power." (Heb. 4:12) Indeed, the Bible can exert its power by giving individuals a solid hope for the future and by helping them to transform their lives for the better.

At a recent assembly of Jehovah's witnesses a young married man in Philadelphia explained how true this was in his life:

"Last summer during our vacation time my younger brother came from Hawaii to visit my wife and me. Together we went on a camping trip. Each night around the campfire he read his Bible to us. We could see that much of what the Bible says seemed to have reference to present-day events. So when he returned to Hawaii, my wife and I continued reading the Bible out loud to each other every day. We soon had finished all of the Christian Greek Scriptures and much of the Hebrew Scriptures.

"From our reading and from what we observed going on in the world, we came to the conclusion that a great destruction was about to come upon the earth and that only a small number of people would survive. We believed that then the earth would once again have an opportunity to develop its natural beauty.

"About this time a friend of ours came to visit from Vermont, and we told him the things that we had been learning from the Bible. He commented that we sounded like Jehovah's witnesses. Not really knowing who Jehovah's witnesses were, we gave no thought to his remark but continued our daily Bible reading. We were truly joyful for the first time in recent years, no longer being overly concerned with the horrible things we saw happening in the world.

"As the summer neared its end, we became somewhat discouraged. We could not understand everything we read in the Bible, and

we didn't feel that we should be all alone in our thinking. Yet when we examined the churches we could see that they were not preaching the Bible's message and they were often carrying on practices condemned in the Scriptures.

"Then we came into possession of a copy of the Bible that used the divine name Jehovah. One day in real desperation we prayed to God, using the divine name for the first time. We prayed for understanding and help to know where to turn and what to do. After what seemed only a few minutes, the doorbell rang.

"Since we didn't know other people in Philadelphia and because we had been involved with drugs, even having some hidden in the house at the time, we thought it was the police.

"Cautiously we went to the door and found that, instead of the police, it was a young woman and her son. She was a minister and was desirous of speaking with us about the very things concerning which we had just prayed. When she identified herself as one of Jehovah's witnesses, I recalled my friend's previous remark. After speaking about the Bible for some time, she left with us a copy of *The Truth That Leads to Eternal Life* and mentioned the meetings of Jehovah's witnesses. That very night we read through the entire *Truth* book. We realized that all of the scattered ideas we had gained from the Bible were put into a harmonious picture. The very next day we attended the meetings she had mentioned.

"Quickly my wife and I stopped our use of drugs. Within a short time I had shaved off my beard and had my hair cut to a reasonable length so that I would truly look like one who was interested in becoming a minister. Now my wife and I are both finding great delight in spending most of our time helping others to appreciate the beauty, power and hope of God's Word."

The BOLEKAJA

-WEST AFRICAN MAMMY WAGON

By "Awake!" correspondent in Nigeria

THERE are many means of transportation used in Nigeria. However, travelling on foot has continued in many parts to be the most dependable, and on occasion the quickest and most comfortable. Next to it is the Bolekaja—a Yoruba name for a very popular mode of transportation, otherwise known in West Africa as the Mammy Wagon.

The Bolekaja, or Mammy Wagon, is a light truck or lorry that has been converted to carry passengers. In the Nigerian capital of Lagos, in and around which I have lived for twenty-five years, many persons still prefer it, despite the fact that there are also many buses and taxis. Why? you may inquire.

Reasons for Popularity

Well, to catch a bus, one has to go to the bus stop, and in some cases it means walking a long distance. But you do not have to do that if you are prepared to travel by Bolekaja. It stops anywhere along the road where passengers are to be found.

Also, the Bolekaja is not tied down to any particular route, and so it will take shortcuts, which can be a real advantage during rush hours. Workers often find it a quicker means of transport to their factories than the buses, which are also fewer in number. So if a person wants to get to his destination on time, the answer often is: Take the Bolekaja.

Another advantage of this mode of transportation is that a person is permitted, for a certain charge, to carry with him heavy loads. One is not permitted to do this on the buses. Since Bolekajas operate between marketplaces, African women find them convenient for transporting wares to and from markets. The frequent use of them for this purpose is why they are also called Mammy Wagons.

Description and Operation

Although there is nothing very attractive or luxurious about it, the Bolekaja has survived as the most popular means of transportation, even in a big city like Lagos.

Its seats are made of plain planks, like benches. There is a row of seats along each side, and also down the middle, so that passengers in the middle can sit facing persons along the sides. Underneath the seats is space for loads.

The roof is made of plywood and is covered over with tarpaulin. The upper sides are mostly open, providing plenty of air. A gate, or door, is at the back. In recent years an improved kind of Bolekaja has been constructed, called a Mauler.

Each Bolekaja has a driver and a conductor or apprentice whose job it is to guard the rear. The conductor has a string to a bell in front of the Bolekaja, so as to inform the driver when to stop and

when to move. He also has a short heavy block of wood to wedge under the wheels when stops are made to pick up passengers. This is to prevent the vehicle from rolling backward, since sometimes the brakes cannot be depended upon.

The conductor sits or stands on the steps, depending on how loaded the Bolekaja is. He is a busy person, for apart from being the eyes and ears of the driver from behind, he also supervises passengers and collects fares. This is not an easy job, since at times he has to fight to collect fares from stubborn passengers. And from these frequent altercations comes the name Bolekaja, meaning simply, "Come down and let us fight."

Of course, the name Bolekaja is not written on the lorry. It is just the nickname given it by those who have had experience with it. And the fact is, all those who have lived in towns along the west coast of Africa are well familiar with this means of transportation. Bolekajas and Maulers frequently have titles or slogans written on their sides, such as, "Man proposes, God disposes," "No telephone to Heaven," "The fear of God," "No money, no friend," "Simplicity is a talent," and so forth.

The law allows a Bolekaja to carry about thirty-nine passengers, including the driver and the conductor. But as long as there are passengers, the conductor will squeeze them in until some can hardly breathe. Any number, from forty-five to fifty persons, are frequently jammed aboard. The speed limit in the city is thirty-five m.p.h., but it is not uncommon to find the Bolekaja going fifty or sixty!

Bolekajas are frequently badly serviced, not only having bad brakes, but sometimes containing insufficient fuel to last for the full trip. When the brakes fail or they run out of fuel between stations, attempts at repair will be made right there,

while the passengers are kept waiting. And no fares will be refunded should one decide to leave to try to find another means of transportation—a factor also contributing to frequent fights.

Long-Time Personal Use

I have many times traveled by the Bolekaja during the past twenty-five years. In 1956 I was obliged to move from Lagos Island to a suburb about ten miles from my office. It happened that at the time the only transport plying the road from this small village to Lagos was the Bolekaja. The first one always left at about five in the morning. The sound of it and the noisy voices of the conductors would awaken people who lived along the road.

At about six a.m. I was usually ready for a few minutes' walk to the station. I would go there because it was easier to determine the correct fare from that starting point to the last station inside Lagos. Those who would catch the Bolekaja along the road would have to depend on the judgment of the conductor as to the amount to be paid, and disagreements led to frequent fights. One Bolekaja ride was particularly memorable.

A Trip to the Office

It was a Monday morning. I woke up very late and made a hurried dash to the station. There I found only one Bolekaja. The engine was humming, the driver was already in his seat, and the vehicle was, as usual, loaded with people. I would not have tried to get aboard if it had not been for the conductor who, seated at the tail end of the vehicle, was still calling out for more passengers.

So, with briefcase in one hand and holding the wooden gate with the other, I placed a foot on the step so as to peep inside to see if there was any space left. At that moment the vehicle started mov-

ing. By the time I was aware that there was no vacant seat inside, the driver was making about fifty or sixty m.p.h. on a very rough road!

My tie was flying in the air and my unbuttoned coat blowing to one side. Yet the conductor thought nothing of my plight. He was demanding that I pay my fare, though he could see, I thought, that to lose my grip on the gate could mean an instant fall to death! However, I was careful not to say anything that might provoke a fight. I just prayed that I would not fall off. After some miles, we came to a stop to let passengers out, and I had a chance to sit inside and pay my fare.

A man, who had just entered and taken a seat opposite me, was also asked to pay. However, he stoutly refused to do so until he reached his destination. I do not know why he refused, but it may have been that he had recently ridden a Bolekaja that broke down before reaching its destination and, as is the custom, his fare was never refunded.

At any rate, the conductor now insisted that he pay then and there. After ex-

changing some uncomplimentary words, they began to pull at each other, and others in the wagon took sides. Shortly the vehicle was brought to a halt, and the driver came back. He joined in demanding that the fare be paid, or the man be put off. The driver and the conductor tried to drag him off, and then the usual thing happened. There was a fight. All of

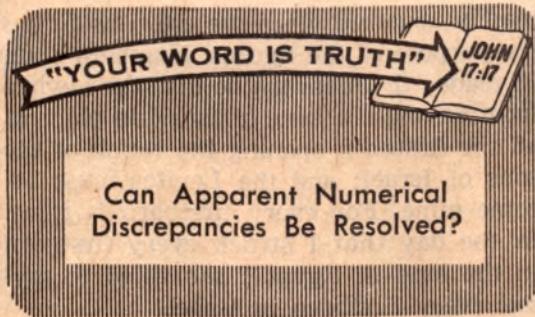

us had to wait while passersby helped to settle the dispute. The fare was finally paid, and we started off again. But I was an hour late in reaching the office that day.

Some time ago, the Bolekaja and the Mauler were banned from traveling into Lagos because of the congestion on the bridge and because of the early-morning rush, but this law was openly defied and was never really enforced.

I am sure that if you visit West African countries, and especially Nigeria, you will still find the Bolekajas and Maulers operating. As long as there are the poor in the land and other means of transportation are inadequate, West Africa's Mammy Wagon no doubt will continue to flourish.

Tropical Forest Life

- For the many types of plants and animals on the earth there is a general pattern of increasing complexity as one moves toward the tropics. Researchers find that the richness and diversity of animal and plant life in tropical forests is almost beyond belief. Whereas a typical hectare (2.5 acres) of woodland in the midwestern United States has about eleven species of trees, one researcher found over two hundred species of trees in the same area of rain forest in New Guinea. As another example, 222 different breeding species of birds have been found in all of Alaska. However, in Panama, with less than one twentieth the amount of land area, 667 different species have been located. And one professor of biology observed that "much of this diversity has not even been cataloged."

WHEN reading the Bible, persons have at times found seeming numerical discrepancies. In the case of such discrepancies should one assume that they are due to copyists' mistakes? Or should thought be given to resolving the problems in other ways?

It should be remembered that extreme care was exercised in producing accurate copies of Hebrew Scripture manuscripts. The scribes counted, not only the words copied, but also the letters. If they detected the slightest error, the entire section of the roll where the error appeared was cut out and replaced by a new and faultless one. The scribes read aloud each word before writing. To write even a single word from memory was considered as gross sin. This painstaking effort in copying also included numerical figures, which were written out in full.

It is, therefore, advisable not to be hasty in attributing a seeming discrepancy to scribal error. Efforts should first be made to resolve problems involving numbers. Even if a solution does not appear to be forthcoming, this would not necessarily mean that the text is inaccurate. Unstated factors may be involved.

Sometimes the variation in figures may be because each relates to a different aspect of a particular event. This appears to be the case regarding Nebuzaradan's entering Jerusalem in 607 B.C.E. Second Kings 25:8 says: "In the fifth month on

the seventh day of the month, . . . Nebuzaradan the chief of the bodyguard, the servant of the king of Babylon, came to Jerusalem." Jeremiah 52:12, however, tells us that Nebuzaradan "came into" Jerusalem on the tenth day of the fifth month.

Commenting on this difference of three days, the work *The Soncino Books of the Bible* (Volume of Jeremiah, p. 353) states: "The interval of three days may be accounted for as representing the date of Nebuzaradan's arrival on the scene and the commencement of operations." It would appear that Nebuzaradan arrived at Jerusalem on the *seventh day* and made his survey from his camp outside the city walls. Finally on the *tenth day* he actually entered the city.

A somewhat similar example involves the age at which the Levites began their service at the sanctuary. According to Numbers 4:3, 30, the Levites began their service at the age of thirty. But in Numbers 8:24 the age limit for beginning Levitical services is given as twenty-five. The reason for this difference appears to be that two categories of service are being discussed. Therefore certain rabbinical sources present the view that at the age of twenty-five a Levite was introduced into the tabernacle service, but only to perform lighter tasks. Then, at the age of thirty, he would engage in the heavier work, such as dismantling, moving and setting up the tabernacle. Lending support to this conclusion is the fact that "laborious service and the service of carrying loads" are mentioned only in connection with the Levitical work beginning at the age of thirty.—Num. 4:3, 47.

There are times when seeming discrepancies cannot be so easily resolved. Especially is this the case in connection with the numbers given in the books of Ezra (2:1-67) and Nehemiah (7:6-69). Both books list the number of persons from

various families or houses who returned from Babylonian exile with Zerubbabel. The accounts harmonize in giving 42,360 as the total number of returned exiles, apart from slaves and singers. (Ezra 2:64; Neh. 7:66) However, there are variations in the numbers given for individual families or houses. In both listings the individual figures yield a total of far less than 42,360. Many scholars would attribute these differences to scribal errors. Whereas this aspect cannot be wholly discounted, there are other possible explanations for the variations.

It may be that Ezra and Nehemiah based their listings on different sources. For example, Ezra could have used a document listing those who enrolled to return to their homeland, whereas Nehemiah might have copied from a record listing those who actually returned. Then, too, there were priests who were unable to establish their genealogy (Ezra 2:61-63; Neh. 7:63-65), and other Israelites may well have faced the same problem. These may not have been listed in the family groupings but could have been included in the total. So the 42,360 persons could be the combined total of the number from each family plus many others who were unable to establish their ancestry. Later, however, some may have been able to establish their correct genealogy. This could explain how a fluctuation in numbers might still give the same total.

Often the context provides the key in resolving apparent numerical discrepancies. A case in point is the number of Levites included in the exchange for Israelite firstborn. In Numbers chapter 3 the census figures for the three families comprising the tribe of Levi yield a total of 22,300. But Numbers 3:39 indicates that the total number of Levite males was 22,000, a difference of 300.

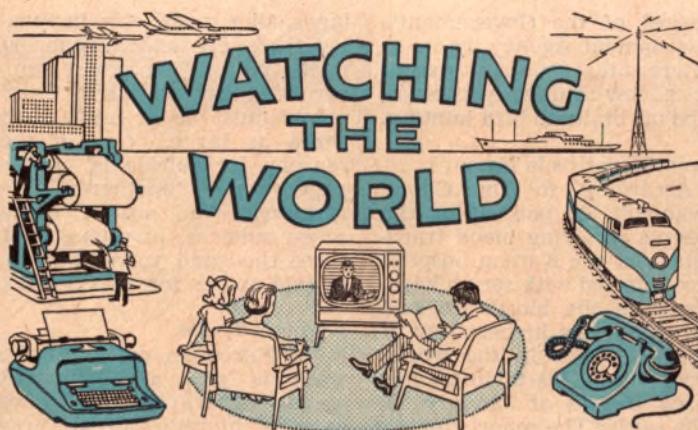

The reason for this difference becomes

readily apparent when we are considering the purpose of the figures. Numbers 3:12, 13 reads: "I [Jehovah] do take the Levites from among the sons of Israel in place of all the firstborn opening the womb of the sons of Israel; and the Levites must become mine. For every firstborn is mine. In the day that I struck every firstborn in the land of Egypt I sanctified to myself every firstborn in Israel."

From this passage it is evident that all the firstborn belonged to Jehovah and thus normally would have been the ones to serve him at the sanctuary. However, rather than have the firstborn act in this capacity, Jehovah chose the males of the tribe of Levi. But some of the Levites would already have been in line for service at the sanctuary. Why? By reason of their being firstborn. These Levites would therefore not have figured in the exchange. So the 300 Levites that were not counted in when the exchange was made must logically have been firstborn.

The number of firstborn in the tribe of Levi may appear to be unusually small. But it should be remembered that due to polygamy a man could have many sons but only one firstborn. It was the firstborn son of the man and not of the woman that was counted. The population of the tribe of Levi being only about a fifth or a sixth of the average tribe in Israel, the ratio of Levite firstborn compares favorably with that of the other firstborn.

The foregoing examples illustrate that apparent numerical discrepancies can often be resolved. Hence, should you find such discrepancies, carefully examine the context and you may find a plausible explanation. If necessary, seek the help of those who have faith in and a good knowledge of the Bible. By doing so, you will find that generally there is no need to conclude that the variations have resulted through scribal error.

Pope Sets Holy Year

◆ Pope Paul has chosen 1975 as a holy year. The last holy year was 1950. Although it was hoped to be "the harbinger of a new year of peace, prosperity and progress," it proved to be the year when the Korean War began. The holy year previous to it was in 1933, the year that Hitler became chancellor of Germany, beginning a period of horror and catastrophe for the world.

Church Criticism

◆ In a scathing editorial the Glasgow newspaper *The Mercury and Advertiser* criticized the leaders of the Church of Scotland for unchristian actions. Referring to the church as "the Kirk," it said: "In almost every sphere of life in recent years, the Kirk has been conspicuous in shirking the real issues. . . . With supreme irony, the Kirk's Welfare Committee voted in favour of granting the Pill to unmarried women, thus encouraging wholesale amateur prostitution. . . . Its greatest misfortune, we believe, is the infiltration into its ranks of men of little faith, and of no convictions,—careerists who regard it as a job, and a safe screen from which to propagate their own particular views. . . . Like some of the members of the British Council of Churches, they try to preach Christianity without

Christ, and at times cast the Bible aside to follow modern fashion."

Stamp Advertising

◆ An enterprising advertising agency has suggested that the United States Postal Service try featuring various advertisements on postage stamps instead of pictures of presidents. The agency believes that the revenues from the ads could bring in \$100 million a year in additional revenues and help to ease the rising cost of mail service.

Oil-eating Microorganisms

◆ Scientists are working with some microorganisms that are capable of consuming oil. They hope that these organisms will become a valuable tool in fighting oil spills that have, in recent years, caused a great amount of damage to coastal areas. By means of enzymes the organisms draw nutrients from the oil and change it into harmless substances. When enough are put on an oil slick, they can reduce it to droplets in thirty minutes.

Earthquake Detector

◆ A way to forecast an earthquake has been noted in Western Australia. It was found that the level of water in wells at Gnangara rose more than a foot just prior to the big

earthquake that occurred at Meckering. It appears that the level of underground water fluctuates prior to an earthquake because of the pressures that have been built up in the water-bearing strata.

Corrosive Rain

◆ Increasing air pollution is causing a sharp increase in the acidity of rain and snow. This acidity in Sweden has increased to 200 times what it was in 1956. It is attributed there to air pollution from England and Germany. In the north-eastern United States it was many times greater than had been anticipated. While this acidity is not considered dangerous to human health, it can have a corrosive effect on man-made structures and equipment. In Sweden the damage from this structural corrosion amounts to 1 percent of the country's gross national product.

Burial at Sea

◆ It is becoming increasingly popular in the state of California for people to be cremated and have their ashes scattered on the Pacific Ocean. Cost is one factor. A funeral that includes a burial plot and a marker can be several times as costly as cremation and disposal of ashes at sea.

Schizophrenia Treatment

◆ By instituting a different treatment the Long Island Hospital was able to reduce by 90 percent the cost of treating people who have schizophrenia. The treatment combined biochemical, nutritional and psychological techniques. These involved the use of large doses of niacin and vitamin C as well as low-carbohydrate diets. The treatment has been so successful that the average number of patient visits could be reduced from 150 per year to 15.

Blood Money

◆ A leading story appearing on the front page of *The National Observer* indicted commercial blood banks for selling "blood that kills." It charged that these blood banks buy blood from skid-row donors for \$3 to \$5 per pint and sell it to hospitals for \$40 to \$50 per pint. It stated: "One industry source says they net 100 per cent profit after processing and other costs." Blood is also bought from prisoners and some is imported from impoverished countries. Poor people in Haiti are selling their blood plasma for \$3 a liter. From 5,000 to 6,000 liters of their blood is exported from Haiti to the United States every month. Blood from commercial blood banks has proved to be one of the major sources of serum hepatitis, which causes the deaths of at least 3,500 Americans each year and the injuring of another 50,000. One agency says that the real rate could be from two to ten times that high, because physicians often fail to report such cases.

Asthma Relief in Salt Mine

◆ The Polish government is expanding an unusual sanatorium that is located on the fifth level of a salt mine, seven hundred feet below the surface of the ground. For a reason unknown to the doctors the salt air in the mine evidently cures asthma sufferers. It seems to have a regenerative effect on the lungs. This underground sanatorium is about ten miles southwest of Krakow in Poland.

Fewer Birds in Japan

◆ Of the 424 species of birds in Japan 76 percent are migratory. Because of pollution many of these birds are no longer migrating to Japan. In 1971 the number of geese sighted there was only one tenth of those sighted in 1953. Concerned over it, the Director

General of the Government's Environment Agency wants to declare all of Japan, except for a few limited preserves, to be off limits to bird hunting.

Serum Hepatitis in Korea

◆ According to Dr. Chong Hwan-guk, 40 percent of the patients receiving blood transfusions in one Korean hospital were infected with serum hepatitis from the blood. He said that this is the highest rate of liver infections in the world. Reporting on his findings, *The Korea Herald* of January 14, 1972, said: "The report further showed that the liver troubles occurred in 15 per cent of those who received one bottle of blood transfused and 80 per cent of those who had more than 10 bottles of blood transfused into their body systems."

Climate Shift Affects Health

◆ Elderly people and persons with heart trouble need to exercise care when changing climates rapidly such as when flying from north to south or vice versa. Such rapid changes in temperature can bring on heart attacks, medical investigators claim. Dr. E. Sotaniemi of Finland stated: "Deviations from the mean temperature toward either colder or warmer conditions increase the number of hospital admissions" for heart attack. Dr. George E. Burch, who is associated with the *Heart Journal*, observed: "Climate is an important but neglected area of medical research." He also stated: "Acclimatization takes a minimum of a week and up to two weeks."

Indian Suicides

◆ According to *The Times of India* in its edition for January 3, 1972, more than 21,000 men and women committed suicide in India during 1969. This is according to official police data. However, the newspaper observes: "The figure is deceptive because suicides in vil-

lages, like much else happening there, are seldom reported to the police. The actual number of those who kill themselves must be at least three times as large." One of the reasons for suicide is, as the paper states, "mother-in-law's tyranny." One out of every seven suicides, involving over three thousand young women, is said to be for this reason.

Europe's Trains

◆ In European countries the train is still an important means of travel. In France speedy, intercity trains carry more than 80 million passengers a year, far more than the domestic airlines are able to handle. For distances up to 300 miles trains are considerably cheaper. Almost every European country is improving train service by installing new equipment. Germany has a system of intercity trains that provide transportation to 33 cities on first-rate trains at an average of one every two hours. Experimental trains are being built by three European countries that will go 315 miles an hour.

Steam Bus

◆ A steam-operated bus went into operation on a trial basis in California as part of the effort to reduce air pollution. It is said to be the first bus of this type that has operated commercially in the United States in many years. It is a conventional, 51-passenger bus that has a steam engine where the diesel engine used to be.

Crime Threatens Democracy

◆ Commenting on growing crime in Canada, a Canadian judge observed that the breakdown in law and order is threatening the Canadian democratic way of life. He believes there is danger that the nation might blindly accept a man or men who would promise an end to lawlessness, and that could mark the rise of a dicta-

torship. The judge said: "Promising law and order, if he succeeds he will give law and order—but it will be his law, his own kind of repressive law. As to order, well, he will give the orders. He will have a cure, but better even the disease than his cure."

Commissioner Blasts Clergy

◆ In Nigeria, Midwest Commissioner for Education E. K. Clark severely criticized Anglican clergymen for abandoning themselves unashamedly to the pursuit of material things. He pointed out that if the church has impressed the public in any notable way, it is in its open alliance with wealth and political success. He ob-

served: "The result is that some of our worst criminals are professed Christians while the brothels are full of women who invoke the name of the Lord Jesus."

Massive Bombing

◆ In the Indochina war American aircraft have dropped more than three times the tonnage of bombs that they did during all of World War II. According to a study by Cornell scholars, about 6,200,000 tons had been dropped by the end of 1971.

Skyscraper Cemetery

◆ The city of Rio de Janeiro in Brazil, with 4.5 million peo-

ple crowded on a narrow strip of land running between mountains and the sea, has not only a population problem but also a problem in finding space to bury the dead. In an effort to solve this problem, a 39-story skyscraper is to be built with room for 21,000 tombs, each tomb having two shelves for bodies. Its capacity is to be 147,000 bodies. There are to be five ossuaries for holding bones of bodies that have decomposed. A space is to be rented at \$80 for five years, at which time someone else can use it after the bones have been removed. Permanent tenancy can be bought for \$1,800.

UPLIFTING MUSIC AND SONGS

Enjoy 119 delightful and inspirational musical compositions on ten long-playing, twelve-inch records. Each matches the songs on Scriptural themes in the songbook "Singing and Accompanying Yourselves with Music in Your Hearts."

The set of ten records may be obtained for only \$8.50. The songbook of 128 pages may be had for an additional 20c.

WATCHTOWER 117 ADAMS ST. BROOKLYN, N.Y. 11201

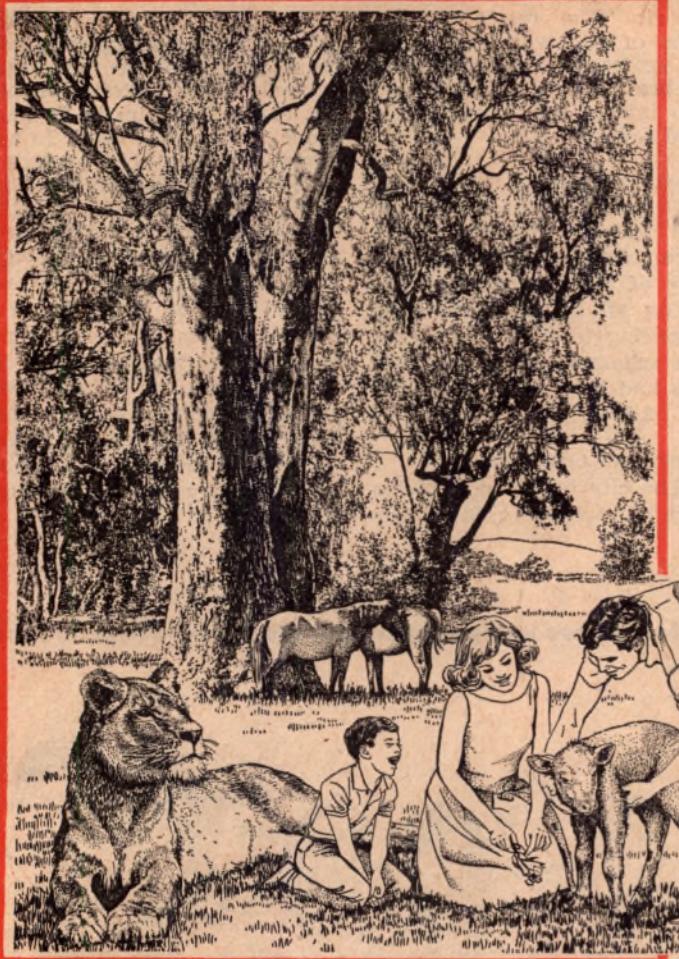

Please send the following items I have checked and for which I enclose \$.....: [] One set of ten musical records—\$8.50. [] One songbook "Singing and Accompanying Yourselves with Music in Your Hearts"—20c.

WOULD YOU LIKE YOUR FAMILY TO LIVE ON A PARADISE EARTH?

Although this may not seem possible in view of present circumstances, it is, nevertheless, a very real prospect.

A paradise is what our Creator purposed for this earth, and his purposes never fail to be carried out.

For your family to live in that paradise they need to follow a course that is in harmony with the One who makes it possible. This requires a knowledge and understanding of his written Word, the Bible.

You can be greatly aided in gaining such knowledge by obtaining one or all of the following Bible study aids: "New Heavens and a New Earth," You May Survive Armageddon into God's New World, What Has Religion Done for Mankind? and "Your Will Be Done on Earth." You can obtain all of them for \$2 and thereby build a fine Bible library.

WATCHTOWER
