THE REASON FOR THIS MAGAZINE

News sources that are able to keep you awake to the vital issues of our times must be unfettered by censorship and selfish interests. "Awake!" has no fetters. It recognizes facts, faces facts, is free to publish facts. It is not bound by political ties; it is unhampered by traditional creeds. This magazine keeps itself free, that it may speak freely to you. But it does not abuse its freedom. It maintains integrity to truth.

The viewpoint of "Awake!" is not narrow, but is international. "Awake!" has its own correspondents in scores of nations. Its articles are read in many lands, in many languages, by millions of persons.

In every issue "Awake!" presents vital topics on which you should be informed. It features penetrating articles on social conditions and offers sound counsel for meeting the problems of everyday life. Current news from every continent passes in quick review. Attention is focused on activities in the fields of government and commerce about which you should know. Straightforward discussions of religious issues alert you to matters of vital concern. Customs and people in many lands, the marvels of creation, practical sciences and points of human interest are all embraced in its coverage. "Awake!" provides wholesome, instructive reading for every member of the family.

"Awake!" pledges itself to righteous principles, to exposing hidden foes and subtle dangers, to championing freedom for all, to comforting mourners and strengthening those disheartened by the failures of a delinquent world, reflecting sure hope for the establishment of God's righteous new order in this generation.

Get acquainted with "Awake!" Keep awake by reading "Awake!"

Number 4

Religion Loses Ground in "THE BIBLE BELT"

FOR over two centuries the southern part of the United States has been a bastion of conservative Protestant religious thinking. Baptists, Methodists and other "fundamentalist" religious groups have so dominated the area that it has come to be referred to as "the Bible Belt."

But now the former solid front presented by the Southland's churches is splintering. In 1971 only the Baptist Church, of these major religious bodies in the South, realized any membership gains. This was a nominal 1.2-percent increase, only one tenth of one percent over population growth. The 1972 increase was somewhat more impressive.

However, more than problems with membership rolls afflict southern churches. A former president of the Southern Baptist Convention told an evangelism conference that "a floodtide of paganism, hedonism and atheism threatens . . . the church." The Austin (Texas) *Statesman* quotes him as saying: "At a time when the church

faces its greatest challenge the church is its most anemic and sickliest. . . . We're living to see the [Baptist] Church die before our very eyes."

Observers of other denominations make similar expressions. Some feel that reviving the 'dying' church may be impossible. Preachers find themselves frustrated over religion's dwindling influence in the South. Ken Forshee, pastor of the Highland Hills Christian Church in Oklahoma City, concluded, after interviewing ministers from twenty-five churches in that area:

"For every man I can point to receiving gratification from the ministry, three would leave the ministry if they had any idea of what they could do. This is one of the most critical issues of the church today."

An associate of Forshee, Rex Vaughan, refers to "a great deal of desperation by clergy as well as laymen—a lack of concrete vision and tools."

But why this "lack of concrete vision," loss of "gratification" and feeling of "desperation" in what has come to be considered the very heartland of U.S. fundamentalist religion? Because critical issues peculiar to southern U.S. churches face "the Bible Belt." For example, there are the changes associated with racial integration. To understand its effect, one must briefly peer back into the history of the U.S. South.

RACIAL ISSUE

SHAKES

"BIBLE BELT" CHURCHES

IN THE early nineteenth century, churches of the same religious organization were to be found in both the North and the South. Black slavery, too, appeared in both sections of the country. But Negro slavery did not work out well in the North, where there was more concentration on commerce, manufacturing and westward expansion. In the South, however, where the cotton crop was the base of the economy, slavery provided cheap labor.

As the two sections of the country divided politically over the slavery question, they also separated *religiously*. Churches in the North condemned slavery as 'un-holy,' while those in the South called it 'holy.' Southern religionists sought isolated Scripture texts to try to support the propriety of enforced black slavery. In 1844 the Methodist Church in the North and in the South split over the black slavery issue; the Baptists did the same a year later. Then, in 1861, the year the Civil War broke out, the Presbyterians divided right down the political Mason-Dixon line.

Churches of the South even involved themselves in the slavery business, according to E. M. Poteat, Jr., minister of the Pullen Memorial Baptist Church in Raleigh, North Carolina. He says: "Not only did Christian men hold slaves for the Glory of God, churches themselves frequently advanced the Kingdom of heaven by letting out for hire slaves who had become

chattel property of the House of God."

Negro slavery thus became firmly rooted in the South. It should not be forgotten, however, that, had black slavery been economically successful in the North, where it had earlier existed, churches there, no doubt, would have supported it as passionately as did their southern counterparts.

Post-Civil War Racial Bias

After the South lay in defeat at the conclusion of the Civil War in 1865, her clergymen, nevertheless, clung to what was uniquely their own—"Bible Belt" Protestantism. "If we cannot gain our political, let us establish at least our mental independence," a Methodist preacher in Mississippi insisted at the end of the Confederacy. The publication *Southern White Protestantism in the Twentieth Century* by K. K. Bailey says: "Southern leaders were convinced that the white religion of the South was of a purer form than that of the same denomination in the North."

Slaves may have been *legally* freed after the Civil War, but the Negro remained socially ostracized. Extremists in the South upheld white supremacy! Even Methodist and Baptist preachers were enlisted into the dreaded Ku Klux Klan to harass emancipated Negroes. Most of the black population in the South was shackled with poverty and illiteracy for decades after the Emancipation Proclamation of 1863.

As a consequence, outcast blacks did not have enough education to read the Bible. Usually not welcome at the white churches, they began their own services, which, at first, consisted of little more than talk-

ing and singing. They made up their own songs, the 'religious spirituals.' Any sermon that was delivered was often no more than a Bible story that had been handed down from father to son and greatly embellished in the process.

But even if whites would have allowed the Negroes to join their churches, few would have obliged. As the author of the book *Deep South* says: "Since Christianity as personified by the Anglo-Saxon Baptist and Methodist was the only religion known to them, and that was so definitely associated with the white boss and landlord, there was fear that they would be compelled to spend eternity where the white-race-God would continue to force upon them the same cruelty and injustice they had always known."

United States history shows that the Negro has wanted little to do with a white racist God. Most, instead, have preferred their own brand of fundamentalist religion.

Effects of Modern Changes

on Southern Churches

Then, dramatically, in 1954, the whole complexion of events started changing in the South. The United States Supreme Court struck down school segregation. Since that time blacks have churned up "the Bible Belt." Walls that enslaved

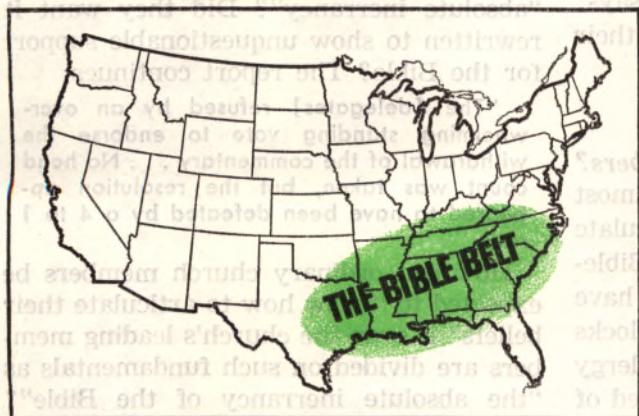

black minds and spirits for a hundred years are crumbling and a college-bred generation of Negroes is emerging, speaking out and demanding equality with whites.

The old southern white-supremist religious arguments have lost their grip before the onrush of Federal legislation and nationally supported protest movements. Many people have forsaken the churches that formerly held racist views. However, in the radical changes of the past few years, black churches in the South have not been left unscathed.

Rather, black churches have become meeting places to organize protests and demonstrations. Black preachers, prominent in the fight for social justice, even seek political office all the way from city councilman to the Senate.

Further, the average Negro has become more materialistic as a result of the demands for equality. *U.S. News & World Report* says: "Black clergymen are sensing a rise in religious indifference among people for whom the black church was once a mainstay of life." (September 25, 1972) True, many blacks in the South remain deeply religious and respect the Bible. But the sudden changes in the social and religious picture are causing a new mood to develop. As one white observed, the Negro in the South now "has little feeling of guilt if he should decide to abandon the church and become an agnostic or an atheist."

The appearance of integration and the rise of black power have been instrumental in fundamentalist religion, "white" and "black," losing ground in "the Bible Belt." But what other factors have also served to drive wedges into the Southland's heretofore solid religious front?

Biblical Ignorance BRINGS FURTHER LOSSES

DURING the 1950's American churches rapidly grew. Congregations swelled. New sects branched off from the main denominations. Nowhere was the rosy dream of 'converting the world to the Kingdom of Christ' rosier than in the "Bible Belt" region. But, beginning with the 1960's, the heat went out of religion. In the South, as we have seen, many church members and ministers were sidetracked with concern over social and political issues.

But what about those who sincerely sought spiritual food in the churches? Did they find the Bible clearly taught as the Word of God and were they shown how it could be used as a guide for life? A clear answer comes from church leaders. For instance, former Southern Baptist Convention president Carl Bates admits: "We reared a generation of Baptists who are almost totally ignorant of our doctrine." And Baptist Dr. K. L. Chafin says: "They don't know how to articulate their beliefs."

Why Biblical Ignorance Among Church Members?

But why are church members "almost totally ignorant" and unable to "articulate their beliefs," which should be Bible-based? Could it be that the clergy have nothing substantial to offer their flocks from the Bible? Do the southern clergy *really believe* the Bible to be "inspired of

God," as did the apostle Paul?—2 Tim. 3:16.

For one church's answer, consider the twelve-volume *Broadman Bible Commentary* prepared by Baptist scholars. It casts such doubt on the authenticity of the Bible that its appearance has created a furor in Southern Baptist circles for several years. But, now, fewer and fewer churchmen challenge the commentary. Says the *Christian Century* regarding the 1972 Southern Baptist Convention business sessions:

"The issue that had threatened to provide the most ear-shattering bang at SBC deliberations—the perennial inquisition involving the 12-volume 'Broadman Bible Commentary' and its editors—went out with a whimper . . . [conservatives] introduced a resolution requesting the recall and rewriting of the work because of its inconsistency with Baptist belief in the absolute inerrancy of the Bible."

Did most of the delegates favor rejecting a commentary that questions the Bible's "absolute inerrancy"? Did they want it rewritten to show unquestionable support for the Bible? The report continues:

"The [delegates] refused by an overwhelming standing vote to endorse the withdrawal of the commentary . . . No head count was taken, but the resolution appeared to have been defeated by a 4 to 1 ratio."

How can ordinary church members be expected to "know how to articulate their beliefs" if even the church's leading members are divided on such fundamentals as "the absolute inerrancy of the Bible"?

There are sure to be wide variations in belief as a result of doubt about the Scriptures' role. But the uncertainty will not be limited to *belief*.

Christian conduct should be guided by the Bible. So, would there not also be doubt about what is proper as regards Christian action, conduct?

Yes. And the confusion that has resulted can be illustrated with a specific example. Two Southern Baptist ministers were asked by a Georgia public relations firm if political voting, military service, saluting national emblems, interfaith activities, patriotic ceremonies and supporting the UN made one a "part of the world." One minister said "Yes" to every point in question. The other said "No" to each point. Yet one of the two pastors also noted on the questionnaire sent him that "God is not a god of confusion."

True, God is not confused, nor is his Word, the Bible. But is there not obvious confusion among the clergy within the same Baptist denomination? The ordinary person will be no less confused. It is not surprising that many "almost totally ignorant" laymen are simply forsaking their churches.

Failure to adhere to the Biblical standard of conduct is also creating a divisive issue among "Bible Belt" Methodists. What issue is that?

Methodists and Homosexuality

The issue is homosexuality. The Bible clearly says: "Make no mistake... none who are guilty either of adultery or of homosexual perversion... will possess the kingdom of God." (1 Cor. 6:9, *New English Bible*) Yet, when four Methodist ministers in the Atlanta area were asked if Bible principles are violated by homosexuality, *only one said Yes!*

In 1971 a periodical, *The Texas Methodist*, surveyed members of that church re-

garding homosexuality. In response to the question, "Do you believe a person can be both a Christian and a homosexual?" 41 percent of the total 533 responding said "Yes!" And 60 percent of the ministers said "Yes!" Some even referred to homosexuality as "natural."

The divisive effect that the homosexuality issue has had on Methodist churches in the area is clearly observed in this letter from one older church member to *The Texas Methodist*: "I have been a Methodist for over seventy years and have never seen such filthy things as are going on in the Methodist Church, and which seem to be accepted by the leaders of our church. No wonder that so many members are leaving."

Hypocrisy Turns Many

in "the Bible Belt"

There is another reason why many—especially younger people—have turned from fundamentalist "Bible Belt" religions. What is that? An answer comes from Paul H. Johnson of the Martin Street Baptist Church in Raleigh, North Carolina: "A lot of youngsters see Christians preaching one thing and practicing another."

Strict requirements have long been imposed on most "Bible Belt" church members, forbidding them to smoke or drink alcoholic beverages. But have church people really believed these teachings? Well, over 90 percent of the United States' huge tobacco crop still comes from the South. And Kentucky remains a leading American whiskey-producing state. Should today's intelligent youngsters be expected to ignore such obvious inconsistencies? Hardly!

Nor can they overlook the hypocrisy within many of the "Bible Belt" churches themselves. A woman in Decatur, Georgia, says: "I was raised the daughter of a Bap-

tist minister, which meant no makeup, no jewelry, no cards in the house, no dancing of any kind, no short hair on girls, no music on Sundays, and absolutely no tobacco or alcohol. Nearly everything was 'no.' By the time I was twelve or so I realized that everyone was saying one thing and actually living another. Most of all my father. He preached on Sunday against everything that he did all week." Such hypocrisy is just one more cause for

BIBLE TRUTH ADVANCES In "THE BIBLE BELT"

THE one sign of spiritual health in "the Bible Belt" (and elsewhere in the world) was recently pointed to by Baptist Church historian Dr. H. L. McManus of Mercer University in Macon, Georgia. He singled out Jehovah's witnesses as due to become a 'big denomination' and called attention to their 'phenomenal growth.' Figures shown here, based on the work of Jehovah's witnesses in fifteen states in the traditional "Bible Belt" region, reveal that, indeed, they have had, as Dr. McManus notes, a 'phenomenal growth.'

Year: 1961 1971 1972
No. of JW's: 70,926 101,032 120,425

many to turn aside from the South's churches.

Certainly, failing to believe the Bible by steadfastly adhering to its teachings has resulted in division, uncertainty and hypocrisy within the 'Bible Belt' religious organizations. It has contributed to their loss in membership. Yet, many sincere people honestly ask if there is any sound spot at all in the religious picture in America's "Bible Belt."

Notice that the increase in one year, from 1971 to 1972, was almost two thirds what it had been in the ten-year period between 1961 and 1971. But why have they grown so vigorously? Consider the explanation offered in a sermon by another Baptist clergyman, C. Earl Cooper of the Riverside Baptist Church in Jacksonville, Florida:

"Witnesses believe the Bible . . . from beginning to the end, 'not a part of it, but all of it.' If you [Baptists] believed in your religion as much as they believe in theirs, if you persisted in the intelligent realism of your religion as much as they do in theirs, if the ten million Southern Baptists across this country believed in their religion the way Jehovah's Witnesses believe in their religion, these Southern Baptists would turn North America upside down or upside up, right side up, but we don't."

Thousands of people have found that "Witnesses believe the Bible" and so have turned from fundamentalist churches where God's Word is often given little more than lip service. Though many persons earnestly desired to understand the Bible and use it as a guide for their lives, it remained like a closed book to them until they contacted Jehovah's witnesses.

For instance, a man in Columbia, South Carolina, contrasts fifty years in "Bible Belt" churches with what he learned by studying with the Witnesses: "As I studied

with Jehovah's witnesses I began to realize that in Sunday School [of my former church] we had the roll call, two collection plates were passed, the Bible was never opened or used. I just sat and listened and never learned anything from the Bible. When I attended the Kingdom Hall of Jehovah's witnesses I heard a fine Bible talk, looking up many scriptures and really getting accurate knowledge and understanding."

Of course, this man found that Jehovah's witnesses not only learn about the Bible, but really believe it and live it. For instance, they do not pass "collection plates" or financially assess members of the congregation. Rather, they follow the Scriptural principle of voluntary giving as found at 2 Corinthians 9:7: "Let each one do just as he has resolved in his heart, not grudgingly or under compulsion, for God loves a cheerful giver."

Truth About the Dead Attracts Many

Hundreds of persons who have been in the churches in the South and want to believe the Bible have been perplexed by the teaching of "hellfire." For instance, a woman in Houma, Louisiana, reveals the frustration she once felt about the "hellfire" doctrine: "I had been taught that God was a God of love as stated at John 3:16, yet the church taught a burning hell. This just did not seem logical for a God of love. I had recently experienced the loss of a loved one in my family and was concerned about the condition of this person. I was thrilled to learn from the Bible the condition of the dead as well as the wonderful hope of a resurrection." Yes, the simple Bible truth stated at Ecclesiastes 9:5, that 'the dead are conscious of nothing at all,' and are asleep in death awaiting a resurrection or return to life, appeals to honest-hearted persons, as it did to this woman. She knows now

that a loving God does not torment persons eternally in a "hellfire."

Another woman, in Daraville, Georgia, had lost her mother in death. She asked her Baptist minister if her mother (not a member of the minister's church) was in "hellfire." This woman, in recalling his attempts to answer, concluded: "Well, when I heard the 'maybes' and 'I don't know's,' that was it. I finally realized that the man didn't know anything about God's Word the Bible. So I decided to forget the whole thing, the preacher, the church, everything."

Sometime later Jehovah's witnesses called on her. Now, not only her questions about the condition of the dead were answered, but she learned how the Bible assists the living. She says: "Now I'm learning the Christian way of life. Jehovah's witnesses really have God as the Supreme Authority on all matters no matter how big or how small the problem. All the answers are in the Bible and now I'm finding them, with the hope of helping others like myself that haven't been getting their questions answered from God's Word."

Biblical Morality Appeals

The genuine, unhypocritical standard of Biblical morality upheld by the organization of Jehovah's witnesses has appealed to hundreds of persons.

Thus a man who had been a member of the board of trustees of a Baptist church in Louisiana recalls: "At a meeting of the trustees we were instructed by the assistant pastor to teach the teen-age boys how to commit fornication with the girls without getting them pregnant." He quit the church.

Then what happened? He states: "My wife began studying with the Witnesses. She was impressed with their moral cleanliness. I was invited to the meetings.

I noticed right away the friendliness of the congregation. Then too I learned that the congregation disfellowships wrong-doers. I knew that here was the organization with very high moral standards." This man has accepted the Bible's standards of morality and is now one of Jehovah's witnesses.

Bible Prophecy Interests Many

Other persons have thrilled to learn of the Bible's prophecies. The Christian apostle Peter shows that Christians do well to 'pay attention to the prophetic word.'

—2 Pet. 1:19.

But in most "Bible Belt" churches, prophecy is largely ignored. One "Church of Christ" minister in Georgia even refers to prophecy as 'open to all sorts of subjective speculation.'

However, the current unparalleled conditions in the world are clearly understood *only in the light of Bible prophecy.* (See Matthew chapter 24; Mark chapter 13 and

Luke chapter 21.) Additionally, it is prophecy that reveals to the Christian the marvelous New Order of righteousness where God's will shall be done on earth as in heaven. (Matt. 6:9; Rev. 21:1-4) Many persons are seeing that this hope is firmly held by the Christian witnesses of Jehovah because they believe the *entire* Word of God. Learning of that same hope, they, too, have become Witnesses.

As these few examples reveal, the Truth of God's Word, taught by Jehovah's witnesses, is spreading rapidly in "the Bible Belt," as it is throughout the rest of the world. While other churches are watching their membership rolls sag, the Witnesses are growing numerically and, most importantly, spiritually, in an understanding of God's Holy Word. Why not personally find out the reasons for this growth? Wherever you live, contact Jehovah's witnesses, learn the Truth from the people who really pattern their beliefs and their lives after the Bible.

USE OF PAIN-KILLING DRUGS

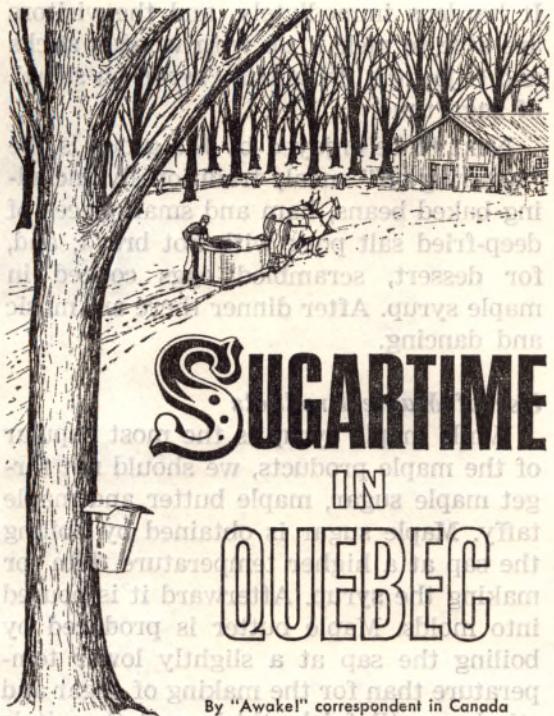

DRUGS to relieve pain are readily obtainable in most countries and are used on a regular basis by many persons. Is it wise? Medical reports show that phenacetin, an effective remedy for fever and pain, can, if used for years, gradually damage the kidneys. Dimethylaminophenazon, also used in some countries for pains of all types, can eventually put a stop to the production of certain white blood corpuscles, with possible fatal effects. Salicylic acid in combination with acetic acid (that is, aspirin), taken to relieve headaches, causes loss of small amounts of blood and, if taken constantly, actually results in frequent headaches.

Commenting on the continual use of such pain-killing drugs, Dr. Heinz Fidelsberger, in *Der Einkauf*, published in Vienna, Austria, said: "Because one suffers pain on a certain occasion and perhaps feels somewhat ill, one

takes a remedy of this sort. Later, it is taken more and more frequently, and then pains set in that are the result of the continual pill-swallowing. Now several tablets are consumed daily to combat these pains, thus increasing the damage to the body." Does it sound familiar?

In further describing these chronic pill swallowers, the doctor's report said: "They complain constantly about innumerable afflictions, feeling miserable day and night, and nothing can help them. They have been poisoned, are the victims of preparations which were surely at one time very valuable but are now being swallowed by the millions daily like addictive drugs."

Would it not be better to identify the ailment and to treat it, rather than always simply to kill the pain, and perhaps yourself?

SUGARTIME IN QUEBEC

By "Awakel" correspondent in Canada

YOU are invited to a "sugaring-off" party. As winter snows give way to the spring thaws, shining tin buckets are seen dangling from the maple trees. In ramshackle sugar huts the vats are set and the fires are stoked, ready for the sap to be boiled into a favorite pancake topping, maple syrup. From Quebec's cities and farms, crowds flock to the sugar camps. Want to come along?

At many farms in Quebec "sugaring-off" parties are an organized affair, with groups from the neighborhood or the cities going along for a day. The first delight is to your sense of smell. The sweet scent of boiling sap combines with the tangy aroma of burning wood to produce a never-to-be-forgotten fragrance that permeates the atmosphere.

The early European settlers learned from the Indians how to make maple sugar from tree sap. In 1851, the first year for which statistics are available, 13,500,-

000 pounds of maple sugar and syrup were produced in North America. Today production is about double that. The United States and Canada are the only maple-sugar-producing countries in the world.

Tapping and Gathering

The maple trees themselves catch your eye—straight trunks, free of branches for two thirds or more of their height. One of the largest Canadian maples commonly reaches eighty to ninety feet and a diameter of two to three feet.

As you look through the stand of trees, you notice sap buckets hanging on them. At the start of the season the sugar maker selected a place on the tree's trunk and bored a hole one to two inches deep in the trunk, sloping it slightly upward so that the sap could drip easily. Next he inserted a metal spout into the bored hole, providing a channel through which the sap could run from the tap hole to the bucket. He also placed a hutlike cover over the bucket.

You will notice that trees with a diameter of less than twelve inches are not tapped. A twelve-inch tree will usually have one bucket, an eighteen-inch tree two buckets, a twenty-four-inch tree three buckets, and a thirty-inch tree four buckets. A tree may give up to forty gallons of sap in one season. The sap runs best on bright sunny days with warm temperatures (about 40 to 45° F.) and frosty nights.

Persons often ask whether the drilling and tapping of the trees harm them in any way. They are deprived of nourishment, but they work harder to make up for the loss. Also, the farmer usually clears the ground beneath them, providing more moisture and nourishment for the trees to draw on. Thus each season trees are drilled and tapped again and again, sometimes for over a century, without apparent harm.

As you wander farther among the maple trees, the ground still covered with snow, you can see the sap being gathered from the buckets. The sap is transported to the sugarhouse on a horse-pulled low-slung sled fitted with a metal gathering tank. The horses seem to have no difficulty winding their way through the snowbanks and trees. The modern metal tank is equipped with a strainer on top and a pipe connection on the bottom, through which the sap can be run into the storage tank at the sugarhouse.

At the Sugarhouse

Here occurs the most crucial and important part of the whole sugaring process, the boiling of the sap into syrup. As it is required, the sap is piped from the storage tanks into the evaporator inside the sugarhouse. This is a giant elongated steel pan. Under the evaporator the wood-fired furnace is in action. The sap flows continuously from the storage tanks into one end of the evaporator, and as it works its way through a long maze of compartments, the heat from beneath drives off the excessive moisture until finally at the draw-off end the concentrated maple syrup emerges. The syrup is filtered and then bottled or canned while hot (180° F.) to prevent mold and loss of color or flavor.

It takes thirty to forty gallons of sap to make just one gallon of maple syrup!

In this whole operation speed and cleanliness are important to the sugar farmer. The entire syrup-making process for one lot of sap is completed in one day.

A Treat for the Visitors

After touring the maple groves and the sugarhouse, the visitors gather around wooden troughs filled with clean, hard-packed snow. Our sugar maker emerges from the house with a bucket of boiling-hot syrup and ladles it onto the snow.

It hardens immediately, and the visitors are able to pick it up with wooden sticks and enjoy the delightful "syrup on snow" of sugartime.

Next to be enjoyed by the group is the "sugaring-off" meal, traditionally including baked beans, ham and small pieces of deep-fried salt pork with hot bread; and, for dessert, scrambled eggs cooked in maple syrup. After dinner there are music and dancing.

Use of Maple Products

While maple syrup is the most popular of the maple products, we should not forget maple sugar, maple butter and maple taffy. Maple sugar is obtained by boiling the sap at a higher temperature than for making the syrup. Afterward it is poured into molds. Maple butter is produced by boiling the sap at a slightly lower temperature than for the making of sugar and stirring until fairly thick, and then it is poured into containers. Maple taffy, usually available only during sugartime, is boiled until it becomes of thick syruplike consistency, then it is poured into containers.

You may want to try some Maple Rice Pudding. Ingredients include: $\frac{3}{4}$ cup uncooked rice, 2 eggs, slightly beaten, $\frac{3}{4}$ cup maple syrup, $1\frac{1}{2}$ cups milk, few grains nutmeg, $\frac{1}{4}$ teaspoon salt, $\frac{1}{2}$ cup seedless raisins. Procedure: cook rice in boiling salted water until tender. Drain thoroughly. Combine eggs and maple syrup and blend well. Stir in milk, nutmeg and the $\frac{1}{4}$ teaspoon salt, then the rice and raisins. Turn into a buttered casserole and cook in a moderate oven (350° F.) until set, 60 to 70 minutes. (Serving for 6 to 8 persons.)

Or perhaps your delight would be in Maple Apple Sauce. One cup of maple syrup and a half cup of water should be brought to a rolling boil in a deep pan.

Then fill the pan with unpeeled sections of apples. Stir until all pieces are coated with syrup. Cook only long enough to tenderize apples. The slices remain unbroken and are glazed with maple syrup sweetness.

The short period of the sugar harvest is over in only four to six weeks, but it is a grand experience each year. We have been glad to have had you as a visitor during sugartime in Quebec.

THE OLYMPICS

-IN IDEAL AND REALITY

LAST fall about one billion persons observed, either firsthand or on television, the Olympic Games in Munich, Germany. Were you among those spectators? Looking back, what do you remember most about the Games?

For many people, the murder of eleven athletes and coaches is most outstanding. This brutal event all but caused the real Olympic spectacle to fade from view. Munich's \$750-million investment was threatened with ruin. But, as events worked out, the Games were only briefly delayed.

Nevertheless, suppose those killings had not taken place? Do the Olympic Games really live up to their own ideals? Let us examine those ideals in the light of what happened in Munich.

Free from Nationalism?

Theoretically, the Olympic Games should reflect "international cooperation and good will," as stated by Avery Brundage, president of the International Olympic Committee (IOC). National prestige

and rivalry should be set aside. But were the Munich Games free from nationalism?

No. Political influence almost torpedoed the Games before they started. Some forty-five nations threatened to quit if Rhodesia competed. The Rhodesians, as a consequence, were ousted from the Games in a move Brundage termed "naked political blackmail." Politics thereafter saturated the Olympics.

For example, charges of biased nationalistic judging were heard. This was particularly true in events where judges had to analyze a performer's style. Almost a dozen judges were dismissed from boxing alone, and others were warned for their prejudicial rulings. *Time* magazine lamented: "Millions [of dollars] are spent on circus-tent publicity, but there is not money to pay for impartial and knowledgeable officials."

Strong feelings were also evident in national 'medal counting.' Individuals win medals for victories in Olympic events. But during the Games observers were

reminded of how many medals *nations* were winning. How well the United States was faring against Russia, or the non-Communist world against the Communist one, was highlighted.

So, regardless of the ideal of "international cooperation and good will," political differences are really *deepened*, not resolved, by the Olympics. "No one can doubt now," the New York Times said, "that the idea of an 'Olympic peace' is a mockery."

But does not competition at the Games make for peace and friendship among *athletes*? Do they not accept the creed: "the most important thing in the Olympic Games is not to win but to take part"?

Winning Not Important?

In reality, winning is most important, as made clear when one considers the participants' views.

One American jumper confessed: "What really bothers me, though, is the thought of going back home and, say I don't win. Someone comes up and says, 'Hey, how'd you do?' and I tell them I finished second, and they consider me a failure. The first thing people always ask is, 'Did you win?' and if you say no, that's the end of the conversation."

Nor does strong competition build friendship among competitors. The opposite is achieved, as admitted by a United States runner: "The spirit of the Olympic Games is gone. . . . Track and field is fun, but here people keep making you want to *hate your competitor*. Why? It's just a race."

Hate, not friendship, leads to such violence as that shown in the water polo competition between Yugoslavia and Cuba. A United Press International report said: "The water in the pool was tinted with blood. Elbows were thrown, players were held under water and there were other

forms of minor violence." But intense Olympic competition has other bad effects.

Some athletes stimulated their bodies with drugs like ephedrine, only to be barred from competition. Others, whose particular sport demanded steady nerves, used tranquilizers. Did athletes drug themselves because they believed "taking part" was all-important? No! In reality, they were determined to *win!*

Only "Amateurs" in the Olympics?

Ideally, also, all Olympic participants should be "amateurs." They should participate for love of sport and not for money. But the hypocrisy behind the 'amateur status' was pointed up in *Esquire* magazine:

"Often, amateurism is merely a matter of whether one gets paid openly or secretly. One 'amateur' runner recently received a reported \$4,000 for a single race. A jumper admits to getting a \$6,000 sports car for changing his brand of track shoes just before the Olympic final. In Europe, the payments are also made under the table, but the table is often out in plain sight. One American tells of being handed an envelope on the victory stand in full view of 20,000 Europeans. 'Everyone knew what was in the envelope,' he says with a laugh, 'and most of them knew how much was in it. The guy who gave it to me was a member of the country's Olympic committee.'"

So financial gain does motivate many "amateur" competitors. Not surprisingly, correspondent Eric Segal referred to the Games as "sick with commercial elephan-tiasis."

Nevertheless, today, a clear distinction between "amateur" and "professional" is difficult. For instance, under the Communist systems all Olympic athletes receive food, housing and wages from the government. Yet they are not "professionals," as there are no 'professional sports' in the Communist world. But Communists compete in the Olympics against athletes from nations who struggled to 'pay their own

way' to the Games. Western nations say this is grossly unfair.

However, are Western teams entirely free from the same charges? Do not American universities grant scholarships worth thousands of dollars to "amateur" student athletes? Do not some American military men spend much of their entire service career, while being housed and fed by the government, competing as "amateurs"? Such practices are equally unfair to poorer athletes.

Because of the friction revolving around the 'amateur status' ideal, many Olympic backers prefer to permit *all* athletes, including "professionals," to participate. Already, dropping "amateur" and "professional" labels has worked out favorably in golf and tennis tournaments.

Religion's Role at the Olympics

The Olympics are spoken of as the world's outstanding sporting event. But, in reality, many *religious* customs have been preserved in connection with the Games. Does that surprise you?

Well, the ancient Greek games, which started in 776 B.C.E. and continued into the Common Era, were essentially *religious* in nature. Today the religious tradition has been maintained. How? Con-

sider what happened before the 1972 Olympics.

A woman, dressed as a high priestess, requested Zeus for his grace. She ignited a torch from a fire lit by the sun at the ruins of the Hera temple in Olympia, Greece. For four weeks this "sacred"

Olympic flame was carried about 3,500 miles by relay runners to Munich. When it was used to light the Games' "sacred fire," there was a fanfare of trumpets, the releasing of thousands of doves and an artillery

salute. Then followed a benediction and the Olympic hymn. Really, ancient Greek religious rites, though modernized, live on in the Olympics!

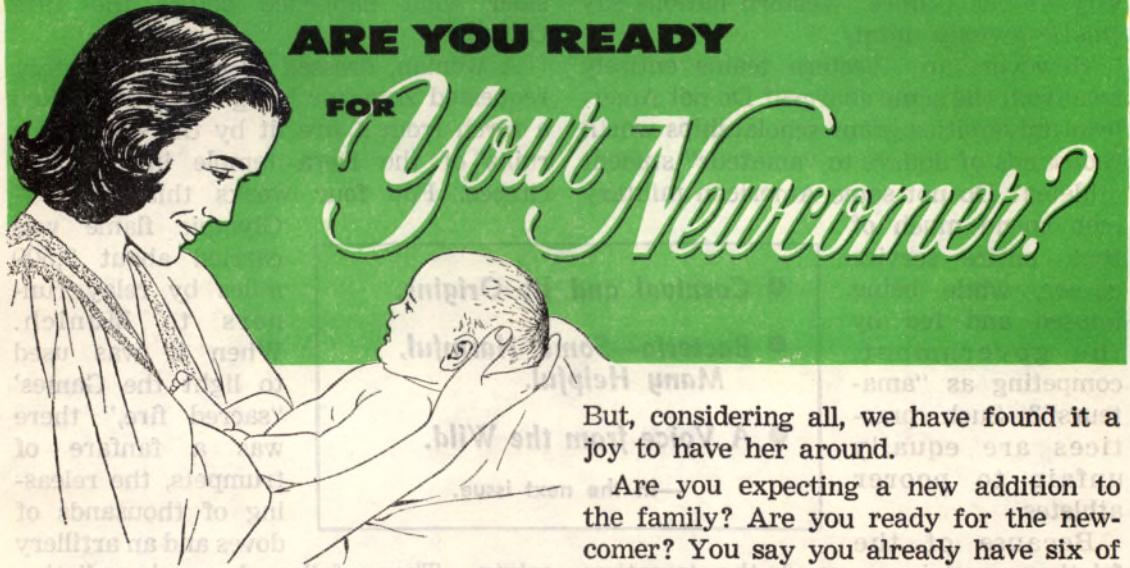

The Future of the Olympics

Olympic ideals seem noble to some. However, the 1972 Games again clearly demonstrated that these ideals are not attained. Some suggest making the Games smaller in the future, holding the swimming championship in one place, track in another, and so forth.

But, in reality, the Olympic Games simply reflect the problem-wrecked world they represent, filled with nationalism, competition and commercialism. The problems before the Olympics, like those facing the world, make some doubt that the 1976 Games will even take place.

Even Enemies

● The saying, "Those who seem to deserve love least, need it most," is not unlike Jesus' admonition to Christians: "Continue to love your enemies and to pray for those persecuting you; that you may prove yourselves sons of your Father who is in the heavens, since he makes his sun rise upon wicked people and good and makes it rain upon righteous people and unrighteous."—Matt. 5:44, 45.

ARE YOU READY

FOR

Your Newcomer?

IT HAD been a rough day. Nothing seemed to have gone well. The directors were not pleased with the sales figures. Customers were complaining because of not receiving on time the goods they ordered. An atmosphere of gloom prevailed in the office the whole day. I was depressed as I drove home that evening.

Opening the gate that led to our front door, I was suddenly brought to my senses by the excited chatter of our two-year-old daughter as she ran down the pathway to meet me. What she was saying I do not know. It was not important. But I was immediately transported from the realms of the office gloom to the world of our little girl. What a relief to be home! Yes, children somehow have a way of making one forget one's problems.

My wife and I are in our mid-thirties, but we both agree that the last two years with our little daughter have been a real education. True, we have had our tiring, and even frustrating, moments. At times we could "eat her up" with affection, and at other times we almost wish we had!

But, considering all, we have found it a joy to have her around.

Are you expecting a new addition to the family? Are you ready for the newcomer? You say you already have six of them? Fine! With your experience no doubt you could add much to the following.

Nine Months of Preparation

Conception, gestation and birth are truly a marvel. Men will probably never be able to explain fully just what takes place during these nine months in mother's womb. Think of it! At conception this creature that is due to affect your lives so much is smaller than the dot on the letter "i." Three weeks later it has grown to about the size of the letter "t."

At five months the unborn baby may stretch, head to foot, the width of the page of this journal. Another four months, and all six to ten pounds of him will let out a cry that will thrill you and which virtually says: "Here I am. Are you ready for me?" Actually, these nine months have provided just enough time for the preparation of your mind, emotions and body for the welcoming of your new friend.

Remember, mother, what is taking place within you is a very marvelous and natural process. Do not be overanxious about the changes in your body. But it will be worth while to learn something of the mar-

velous development from fertilization of a single ovum to the final delivery of the newborn baby. A visit to the library or local bookshop will help you to locate this information. It will give you insight, and enable you to get ready for the newcomer.

What name will you choose? Your child will be known by it for a long time, so it should be given serious thought. Some parents choose names from the Bible. Others select a name having more of a family connection. You may think of a name that has some personal meaning to yourselves. Some parents have even made up an original name. But do not give a name that will result in awkwardness or embarrassment to the young one as he grows older. Maher-shalal-hash-baz may have been all right for the Israelites of Bible times, but it would have its difficulties in most places today!—Isa. 8:1.

You may also want to select a doctor, one in whom you can feel confidence. As a Christian, you will want one who respects your Bible-trained conscience, which may object to certain medical practices. The Rh factor can sometimes cause anxiety and so it is wise early in your pregnancy to find out if this could be a problem in your case. However, rarely does the first child develop this Rh complication.

Then there is the matter of clothes to buy and napkins (diapers), of which you will need plenty. Also, will you have the baby delivered at home or in the hospital? Are you, as father, going to be present with your wife at the time of delivery? These are just a few of the many things you will wish to ask yourselves and ponder over during these nine months. But there are other decisions to be made.

Breast-feeding? Vaccinations?

One early decision is whether the baby will be breast- or bottle-fed. It is true that bottle-feeding is less bothersome. But even

though cow's milk may be adapted to meet adequately the physical needs of the young one, there is a vital emotional need that mother fulfills when she nurses her child.

Also, no substitution can match perfectly the nourishment and protection that mother's milk was designed to give a baby. It progresses from colostrum in the first two or three days, which is an important food for the little one, to a milk that becomes stronger according to the baby's needs. Breast milk has a constant temperature; it is germ free; it is easily digested; it contains all the vitamins, and there is evidence that it provides protection from infections.

If you decide to breast-feed your baby, you may find some difficulty at the start, perhaps because of tension or anxiety. Do not worry. Perseverance usually brings satisfying results. You may find that it is several weeks before you feel that the secretion of milk has fully set in.

Then there is the matter of inoculation. It seems that medical science is continually adding to the number of vaccinations and inoculations that it recommends for the protection of the young. It is your decision to make as to which vaccinations your baby will have, if any at all. The pages of this and other journals have contained fine information on this subject, and some research will put you in a better position to decide what you believe to be best.

Early Training

Do not be surprised if you find that your life is not your own when the newcomer first arrives at home. Due to his special needs, you may find that your homelife is governed to a large extent by the desires and dictates of the baby. However, gradually the little one can be trained by firmness and kindness to realize that he has become a member of an already es-

tablished household, and equilibrium can be restored.

Right from the start help your child to understand the need to obey, even if it means at times using an open hand applied to a sensitive part of his little anatomy. Obedience can be a real protection from all sorts of dangers. To children the whole world is something new and wonderful to explore, but such explorations can be fraught with danger. Obedience will be your newcomer's protection.

At a very early age, between one and two years, children can be taught to sit quietly for periods of time. If yours is a family that enjoys studying the Bible with others in a group, this will be very important to you. Children like to have books the same as Mom and Dad, and a little cardboard book with appropriate pictures pasted inside will often suffice at the start when pages easily get torn.

If your child becomes restless, it may be helpful to take a brief walk outside for some fresh air. Should he continue to misbehave, the next "walk" would not be so refreshing. The time will soon come when just to mention the idea of going outside will recall the unpleasant experience there, and will get a quick response. Remember also that commendation is very important in all fields of training. When your child does sit well, commend him, and he will glow inside.

Teaching your child to count, learn rhymes, or to read is all part of his training. The mind is a marvelous gift from Jehovah God, and the extent to which it is developed at this early age will often determine the extent of its use later on.

There is also much training to be done in the home. Teaching the child to put away his toys, to put his dirty clothes in the right place, to dress and undress himself can all be done before a child is three. It may take longer to have him do these

things himself, but the time you spend teaching him is an investment. You will realize the benefit later.

It is indeed a pleasure to see little ones, without being told, putting away their toys, straightening up their room or doing other chores they have been taught. It is a pleasure, too, to hear them preface their requests with "Please, Daddy," or to say, "Thank you, Mommy." But best of all to see is their growth in appreciation for God. You may sit down to a meal one day and before expressing thanks in prayer your little one may remind you, "Close eyes, Daddy." How happy you will be that he is learning to copy your example of thanking God! It is never too early in life to begin building in his mind and heart a right relationship with his Creator.

Of course, it is always good to remember that there are no 'little angels' in the form of children, so be prepared for disappointments. At times there may seem to be no response to your training and you may feel completely frustrated and depressed. You may often find yourself thinking, "Am I training him in the right way?" But never give up.

Children go through all kinds of moods and stages. There are no fixed rules for handling their varying temperaments. What can be said is that they thrive on love, are tamed under discipline, thrill at kindness and appreciate patience. When they are as old as you are, they will thank you for the training you gave them.

Joys and Satisfaction

The first cry of the newcomer will bring you, its mother, an indescribable surge of joy. The baby's first smile, lifting its head to see what is going on, its gurgling noises, trying to chew on its own feet, following you around the room with jerky head movements are all occasions that will also

bring you joy. In fact, you will find that not a day goes by without some surprise and discussion of the little one's development. One day you will peep into its little crib and get the biggest and brightest smile, and you may feel sure it is a smile of recognition of you, its father.

It brings much satisfaction to parents to see the child developing mentally and physically. You may be eating one day, and perhaps reading a book at your side, when suddenly you become aware that as you raise your fork so does this little mimic sitting at your side. Then you notice that he is also pretending to read, carefully studying your exact hand and arm positions so as to copy them. You will often see yourself in your little one.

When was the last time you jumped around like a frog, or pretended to be a pussycat, or squeezed under a bed to hide? You may find yourself doing all kinds of strange things. Gamboling or standing on your head will be fun. Cows, horses and even the local dog will take on added attraction. You may be anxious to return home at night.

On the other hand, as mother, you may at times find being with the baby all day quite trialsome. But then he will do something that makes you just want to hug him. Perhaps you are brushing his hair and you tell him to hold his head still. Then you notice: There he is, hands

pressed tightly against his face, mouth open and cheeks pushed in as he 'holds his head still.'

Yes, you have a lot to which to look forward. But it is good to realize that rearing children in this modern, crime-ridden world is not easy. We are living in "the last days" foretold in the Bible; these are "critical times hard to deal with." There is an evil influence all around—in neighborhoods, in schools, on playgrounds—and you will have your hands full to keep your child from becoming as so many other children are, "disobedient to parents." —2 Tim. 3:1, 2.

It is a sad truth—many young ones today are rebellious and turn to delinquency, and so, instead of bringing joy and satisfaction to their parents, they are a source of great pain and heartache to them. It is vital, therefore, that young ones be taught from *infancy* the righteous principles contained in God's Word the Bible. Only in this way can you hope to prevent calamity from befalling your child, and heartache for yourself.—2 Tim. 3:15.

Long ago a Bible writer said: "Sons [and we should also include daughters] are an inheritance from Jehovah; the fruit-age of the belly is a reward."—Ps. 127:3.

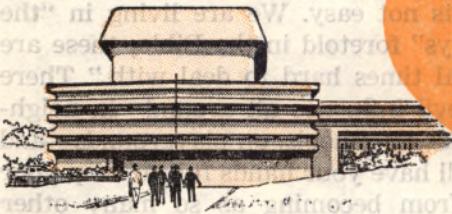

My wife and I experience that reward. Our second child is already here, and we do hope that we are better prepared for this one.—Contributed.

"Be Fruitful and Become Many"—At What Rate?

● The expression "be fruitful and become many" was directed by the Creator to both animals and man. (Gen. 1:22, 28) It is common knowledge that as a rule nine months elapse between the conception and birth of a human. But how about others of earth's creatures? Various authorities give the following time periods for the following kinds: bacteria, 20 minutes to several days; chickens, 21 days; mice, 20 to 21 days; ducks, 23 to 30 days; rabbits, 30 to 34 days; guinea pigs, 68 to 71 days; hogs, 114 days; sheep, 146 days; cows, 270 days; horses, 330 to 380 days; elephants, 607 to 641 days; whales, 330 to 550 days (depending upon the species).

Generally speaking the larger the kind, the longer its period of gestation.

The Future

for

NUCLEAR POWER

NOT long ago there was glowing, almost unrestrained optimism for nuclear power. The atom was viewed as a source of limitless, inexpensive energy. But the optimism has cooled somewhat. As noted by a speaker at the fourth international atoms-for-peace conference in September 1971, there are "unforeseen and unpleasant side effects."

To help protect the American public from adverse "side effects," the National Environmental Policy Act was signed into law January 1, 1970. It requires that a government agency prepare and distribute "an environmental impact statement" that gives the probable detrimental effects a proposed new project may have. It was charged, however, that the Atomic Energy Commission (A.E.C.) failed to implement environmental safeguards in projects it oversees, thus making a "mockery" of the Environmental Policy Act.

In a milestone decision, a United States federal court on July 23, 1971, upheld the charge. Therefore the A.E.C. was required to review permits and licenses already granted to dozens of nuclear power plants under construction, including some that had recently begun operating. In December 1971, Atomic Energy Commissioner Wilfred E. Johnson noted that it might take up to a year to review pending permits.

Delays and Their Effects

This has resulted in considerable delays in providing electricity from nuclear facilities. As of April 1971, it had been a full year since the A.E.C. had issued a full operating permit to any nuclear power plant in the United States! Some utilities were even notified to cease construction on portions of their nuclear plants until a complete investigation could be made. These delays have served to increase the power crisis, for new generating plants are badly needed.

On March 16, 1972, the chairman of the A.E.C. urged Congress to modify the laws temporarily to permit idle nuclear plants to go into operation. Does this mean that public health and safety could be sacrificed in the haste to keep up with demands for electricity? Can citizens be assured that unsafe nuclear reactors will not be pressed into service? Some persons are apprehensive about the matter. Yet there is something else that is of even greater concern.

Some persons ask: What if a few years from now the radiation emitted from nuclear reactors is indeed found to be damaging to humans, even as some prominent scientists have been saying that it is? By then a large portion of electrical power may be generated by nuclear fission. What would mankind do? Shut down

nuclear facilities and bring to a halt the modern way of life based on electrical power? Or would humans accept the resulting radiation-induced cancer plague as a price to pay for electricity? It is indeed an unpleasant prospect to consider, as a writer in the New York Times commented in January 1972:

"The United States, Europe, the Soviet Union and Japan have a habit. They are addicted to heavy energy use, great gulps and injections of fossil fuel. As fossil-fuel reserves go down, they will take dangerous gambles with the future health of the biosphere (through nuclear power) to keep up their habit."

There is, however, quite a different kind of cloud that hangs over the future of nuclear power.

Fuel Running Out

The present-day nuclear reactor is very inefficient in the use of uranium. It utilizes only about 1 percent of its energy content in producing power. As a result, U-235, the uranium isotope used in nuclear fuel, is rapidly being depleted. *Science Digest* of last February observed: "Ordinary nuclear plants are consuming available uranium so quickly that by 1980 we'll probably be scraping bottom."

The Atomic Energy Commission's Robert Nininger recently expressed this ominous outlook: "Things could come to a slow grinding halt unless we could get uranium overseas. Mathematically, we could be taken out to about 1982." Other estimates indicate the supply could last a little longer.

What does this mean? Surely all these nuclear plants are not being planned and built knowing that the whole nuclear fission system of power generation could soon grind to a halt. How is this problem supposed to be solved? Will it result in lessening or increasing possible hazards to man?

A Different Kind of Reactor

The fast-breeder reactor is being looked to as the solution of the uranium shortage. Peter Mummery, head of a reactor development center in northern Scotland, said of breeder reactors: "We are putting all our money on them." The United States has taken a similar position.

In his June 4, 1971, message to Congress on the energy crisis President Nixon asserted: "Our best hope today for meeting the Nation's growing demand for economical, clean energy lies with the fast-breeder reactor." The president asked Congress to pledge \$2,000,000,000 in federal funds over the next ten years to develop a commercial model. But how is the breeder reactor intended to solve the fuel problem?

It is by producing more fuel than it uses. The breeder reactor can actually do this, thus the name *breeder*. This may at first sound impossible, but how it can be accomplished is appreciated when one realizes that new elements are formed during the fissioning process.

In the conventional reactor's operation, U-235 atoms split and form smaller radioactive elements, as well as releasing neutrons. But U-238 atoms, instead of splitting, capture a neutron and are transformed into fissionable plutonium, an element not ordinarily found on earth. In a conventional reactor a relatively small number of U-238 atoms capture neutrons, thus producing only a little plutonium. But in the breeder reactor more U-238 is transformed into plutonium than the amount of fissionable fuel consumed! How is this made possible?

It is due to the speed with which the neutrons travel. In the breeder reactor, rather than having a material of some sort to slow down the neutrons, they are left to travel rapidly. (That is why it is called

a fast-breeder.) Thus when the neutrons hit and split either U-235 or plutonium, they dislodge from the fissioning atoms more neutrons than occurs in a conventional reactor. This makes more neutrons available to be captured by the plentiful U-238, and hence there is a net increase in the production of plutonium, which is the fuel used in breeder reactors.

Because of thus breeding fuel, the chairman of the A.E.C., James R. Schlesinger, said: "The breeder will be able to provide electrical energy for tens of thousands of years." But the question has been raised: Can commercial breeder reactors be developed before uranium supplies run out?

Possible Production Time Schedule

A number of test versions have already been built. Also, the Soviets and British have made significant progress in building commercial-size breeder reactors. But it was not until January 1972 that the United States announced plans to build their first large fast-breeder reactor. Construction may begin sometime in 1973, and completion can be expected, observed A. Eugene Schubert, vice-president of the General Electric Company, "about 1980." Therefore he said:

"Utilities obviously will not buy any of these new plants until they see it proven, so it would probably be 1982 before any substantial orders are taken and, thus, 1990 before any real quantities of electricity come from breeders."

Some believe it may be a close race to get breeder reactors into operation before uranium supplies run out. Unless breeder reactors are available by the late 1980's, observed one writer, the first generation of nuclear power stations may be the last. So there is urgency to rush ahead with the breeder program. Yet there is also vigorous opposition to this. Why?

Question of Health and Safety

It is because of the potential dangers associated with the breeder reactor. Critics say that there is no assurance it will function safely. For instance, there is danger with the coolant. Because of the higher temperatures at which the breeder reactor operates, liquid sodium rather than water is used to cool the reactor and transfer its heat for producing steam to generate electricity. But since liquid sodium is very corrosive and will explode upon contact with water or air, the concern for safety is understandable.

But safely handling tremendous volumes of circulating sodium is only one engineering problem. Just a few years ago it was discovered that metal swells when exposed to prolonged heavy neutron dosages. Since the core of the reactor must be built with Swiss-watch precision, this presents a formidable problem.

When one considers the fuel used, the seriousness of any malfunction can be appreciated—the plutonium fuel being one of the most dangerous substances in existence. And to think that each reactor will contain thousands of pounds of it! Dr. Edward Teller observed in *Nuclear News*, August 21, 1967:

"In order that it should work economically in a sufficiently big power-producing unit, it probably needs quite a bit more than one ton of plutonium. I do not like the hazard involved. I suggested that nuclear reactors are a blessing because they are clean. They are clean as long as they function as planned, but if they malfunction in a massive manner, which can happen in principle, they can release enough fission products to kill a tremendous number of people."

In keeping with the requirements of recent legislation, a statement as to potential risks of the breeder-reactor program has been distributed. But prominent scientists find shortcomings in the statement. The *New York Times*, April 26, 1972, re-

ported beneath the headline "Scientists Oppose Breeder Reactor":

"Thirty-one scientists and other professional persons urged Congress today to deny the Nixon Administration's request for funds to start building a \$500-million demonstration model of a nuclear breeder reactor to generate electricity."

"Too many serious questions exist about the safety and environmental impact of such a project to make a commitment at this point to the commercial development of this technology," the scientists said in a statement."

URING a recent summer a family of three happily set out on a trip, taking with them their thirteen-foot camping trailer. When they reached their destination, they set up camp and, at the conclusion of the day, went to bed in the trailer. Because of the cold mountain air they left a coal brazier burning while they slept. This was a serious mistake.

Although they had opened a roof vent and a louvered window for ventilation, carbon monoxide gas accumulated. When the mother awoke early in the morning she felt nauseated and exhausted. She went to awaken her twelve-year-old daughter, but was shocked to find the child dead. Carbon monoxide, the silent killer, had been at work. It had nearly killed the father and mother as well. Both had to be hospitalized.

Too many people fail to realize that smoldering charcoal can kill even in a ventilated room. Because they cannot smell or see this gas, they fail to be alert to a dangerous situation. A similar peril exists in automobiles.

It is not uncommon to read news reports about people found dead in parked cars, killed by carbon monoxide from their automobile engines. Some had died in airport parking lots where they were keeping warm by running the engine of the car while waiting for someone. This story has also been repeated at drive-in movies when the car's motor was used for heating the car.

Carbon monoxide gas is formed by the burning of any substance that contains carbon. The gasoline used to run automobiles, the fuel used for heating homes and even the tobacco in

However, the commitment to nuclear power is so great that the chances that there will be a change in policy are considered very slim. Admittedly nuclear reactors present risks—extremely dangerous ones—some well-informed persons believe. However, government and industry leaders are willing to take these risks.

What does the future hold for nuclear power? It is far from being entirely bright and optimistic.

The Silent Killer

cigars and cigarettes give off carbon monoxide when burned. Ample ventilation is essential.

According to a report made by a panel of the U.S. Public Health Service under the leadership of Dr. Daniel Horn, there are surprisingly high carbon monoxide levels in rooms filled with tobacco smoke. Thus smokers damage not only their own health but that of others.

When a person breathes in carbon monoxide gas, the ability of the blood to carry oxygen from the lungs to the tissues of the body is seriously impaired. The hemoglobin in the blood has an attraction that is a hundred times greater for carbon monoxide than for oxygen. As a result, the tissues of the body become starved for oxygen. The body experiences a loss of energy and a crippling of mental and physical reactions.

Carbon monoxide is said to become dangerous when it reaches a level of ten parts per million parts of air, a level that is not unusual in congested city traffic. At this concentration harm can be done to a pregnant woman and persons suffering from bronchitis, emphysema and chronic heart disease. Since a damaged heart may not be able to make compensation for a reduced oxygen supply in the blood, death can result. A mixture of 600 parts of carbon monoxide per million of air, such as can easily accumulate in a camping trailer with a coal brazier, can kill in the space of three hours.

Although coal braziers, automobiles and stoves are commonplace and perform services for man, it should never be forgotten that they also harbor a deadly killer. It is vital to be aware of the danger and to take precautions.

THEY LET THEIR LIGHT SHINE

JESUS CHRIST told his followers: "You are the light of the world." (Matt. 5:14) Serving as such a light meant displaying fine Christian works, helping others by word and example to become servants of Jehovah God as disciples of the Lord Jesus Christ. Said Jesus: "Let your light shine before men, that they may see your fine works and give glory to your Father who is in the heavens." (Matt. 5:16) It is for this reason that Jehovah's witnesses endeavor to make good use of their opportunities to share the Bible's message with others. This has moved many to study the Holy Scriptures with the witnesses.

At his place of employment one of Jehovah's witnesses in Canada talked about an assembly he had attended. A young man overheard the conversation and was moved to approach the Witness to ask questions. Almost immediately the young man began attending the meetings of Jehovah's witnesses, eagerly reading at the same time many of the publications of the Watch Tower Society. For two successive Sundays this young man was with the Witness and his family from nine o'clock in the morning till nearly midnight, attending meetings as well as studying and discussing the truths of God's Word. Just three weeks from the time of his first Bible study he was baptized.

His wife was away during much of this time and upon returning was overwhelmed by what had happened in her absence. But she, too, agreed to have a Bible study and is now a dedicated, baptized witness of Jehovah. Only one year from the time of his own baptism, this young man saw one with whom he himself studied the Bible take his stand for true worship and get baptized.

A Witness from Finland relates: "Some time ago a man and his two sisters moved next door to us. One day we happened to walk home together and I got the opportunity to tell him that we were Jehovah's witnesses and also to speak to him about God's kingdom. The man said that he was an atheist and also a Communist. So he felt that it would be a waste of time to talk about the Bible and God."

The Witness then invited this man to his home, saying: "If either one of us can give sufficient grounds to show that he is right, then

the other would be forced to change his viewpoint and beliefs." That same evening the man did come to the home of the Witness. The discussion lasted from 8:00 p.m. to 1:30 a.m. The man agreed that God existed after all and expressed his desire to know more about Jehovah and his purposes.

A Bible study was started. But one evening a week did not satisfy him. So a study was held every free evening. In just a few months he became a dedicated, baptized Witness.

He started a Bible study with one of his sisters. Soon his other sister joined in and both became witnesses of Jehovah. He also interested his youngest brother and his brother's wife in the Bible's message. Both of them began attending the meetings of Jehovah's witnesses regularly. Still other relatives were also given attention. This led to a Bible study's being started with a cousin and his family. In just a few months the cousin, his wife and their two children began sharing in the house-to-house ministry of Jehovah's witnesses.

A traveling minister of Jehovah's witnesses, a circuit overseer, was returning with his wife from a call in the wilds of the Andes in southern Peru. Walking down a dusty trail, they came upon a man watering his burro at a bubbling stream. The man pushed at the burro to get it to move so that the circuit overseer and his wife could get by. Doing so, the man said: "I'll get this soul out of the way." At that the circuit overseer asked him whether it was correct to call his burro a "soul." The man looked puzzled, thought for a minute and then replied: "Well, I have always said that." The circuit overseer got out his Bible and showed the man that it stated that animals indeed are souls. (Num. 31:28) He also discussed with him the true condition of the dead and the hope of the resurrection. The man gladly accepted the Bible study aid "*Things in Which It Is Impossible for God to Lie*." As the man's home was in an area where Jehovah's witnesses had never visited, the circuit overseer's use of his opportunity resulted in reaching a remote section of Peru with the "good news" of God's kingdom.

What a fine incentive such experiences are for God's people not to overlook opportunities to let others hear Bible truth!

Give Us Our Daily Bread

NOWHERE is the expression "daily bread" more appropriate than in the Middle East where it originated. Even today bread is the food of greatest importance in a household. No matter how many dishes a meal may have, if bread is not included, the Middle Easterner will not feel he has eaten properly.

Here, the amount of food a person consumes is measured by the amount of bread he eats, not by the number of helpings of any one dish. So the expression, "I really ate! Two loaves!" is common. If unexpected guests arrive just at mealtime, it presents no problem to the Lebanese housewife if she has plenty of bread in the house. The rest of the meal can be stretched to meet the demands.

Necessarily, then, when something happens that cuts down the bread supply, panic can result. A bakers' strike can cause panic even though the markets are full of all other kinds of food.

Varieties of Lebanese Bread

One may wonder why bread is so important to the Middle Easterner. The answer becomes apparent when one learns of the many kinds of bread that are eaten and how they are used as edible "spoons" and "forks." Consider a few of the kinds of bread eaten in Lebanon.

By far the most popular is "khubz Arabi," or Arabic bread.

The yeast dough, made with either white or whole-wheat flour, differs little from Western bread dough. It is made with water, in place of milk, and is only slightly salted. That is where the similarity ends, however.

The mixed dough is divided into balls about the size of a fist and allowed to rise. After rising to the proper extent, the loaves are either flattened by hand or passed through a machine that looks like a washing-machine wringer. As a result, the loaves are now thin and flat and about the size of a large dinner plate. Again they are allowed to rise slightly. Now the bread is ready for baking.

As the loaves bake they puff up so that they look like overturned mixing bowls. In just a couple of minutes they are baked to a turn. When they cool they collapse again, but now the loaves are like pockets, seamed all around, crisp on the outside and moist on the inside.

Six of these hollow loaves make up about one kilogram, 2.2 pounds, of bread. Big families consume five or six kilograms of bread in one day, so the housewife has quite a stack of bread to carry home from the bakery!

A delicious variation of Arabic bread is "kaak," which is sold wherever children congregate. This is a smaller size loaf, and only half of it is hollow. The other half is shaped like a handle, somewhat resembling an oversized, lopsided doughnut. It is covered generously with sesame seeds and toasted crispy.

Every afternoon when schools let out, or near any park, vendors carrying large trays of "kaak" on their heads can be heard shouting their

By "Awake!" correspondent
in Lebanon

wares. If you stop a vendor, he will let you choose the loaf you want. Then, poking a hole in the hollow part of it, he will sprinkle the inside with an herb mixture of thyme, sumac and salt. A tasty afternoon snack!

A popular bread for breakfast here in Lebanon is a dry "kaak" that comes in the shape of a doughnut or a finger. It is flat to the palate by itself as it contains no salt, but is quite tasty when dunked in one's favorite beverage.

Another type of bread that is almost as popular as Arabic bread is "khubz mar-qook" or "khubz as-saj," a paper-thin variety. The basic dough and the weight of the loaf are approximately the same, but the loaf is formed into thin, two-foot-in-diameter dimensions by being tossed from hand to hand, as pizza dough is prepared. This bread is quite crisp and almost devoid of moisture, so it keeps a long time. Since village women bake only once a week for their large families, this is very practical for them. Week-old bread of this type is as good as that freshly baked.

Still another style of bread, popular mostly in the mountain villages, is "khubz at-tannoor." Again, the dough recipe is standard, but the loaves are of another consistency due to the way they are baked. The oven used is a convexly curved stone kiln.

After the loaf has been flattened and tossed, it is placed on a covered cushion and lowered into the preheated kiln and slapped to a curved side, where it sticks till baked. It is then peeled off when done. These loaves are thicker than the "khubz marqook" and remain moist several days.

Not to be overlooked are the Armenian varieties of bread. These are not much different from French-style bread. The loaves are sprinkled with sesame seed be-

fore baking, which gives them a nutty flavor.

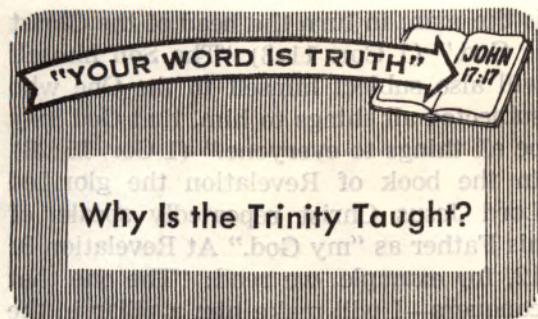

Edible Cutlery

Many Lebanese dishes are similar to stews, and are eaten with rice. In place of forks, each one has his loaf of Arabic bread, or the paper-thin "khubz mar-qook" variety if preferred. For each mouthful of food a piece of bread about two inches square is broken or torn off the loaf, folded into a scoop, and used to convey the food to the mouth and eaten right along with the food. Even the thinness of sauces can be scooped up in this manner without any leaks; the crusty surface of the bread prevents such a disaster.

Most Oriental restaurants do without cutlery, but serve all the bread one wants. For dinners like shish kebab (broiled lamb on skewers) or charcoal-broiled chicken, handy pieces of bread can be used to pick up the meat. A favorite evening meal is "maza," plates of finger foods, salads, meats, cold cuts, nuts and, of course, Arabic bread.

An Arabic sandwich is also different from the sandwich made of bread slices. Either a whole Arabic loaf or half of one can be used. The loaf is split apart, making two complete rounds. A favorite filling or spread is applied and then the loaf is rolled up, beginning at one edge, till it becomes a long cylinder with all the filling inside. Children may eat several a day, in addition to their regular meals.

Here in Lebanon where we eat bread every day, regardless of what else we consume, we can easily appreciate that Jesus Christ meant 'daily food' when he taught his followers to pray for their 'daily bread.' May we ever be content and thankful for this provision of God.—Matt. 6:9-11, Authorized Version.

Why Is the Trinity Taught?

ACCORDING to the Trinity doctrine adhered to by the majority of Christendom's churches, the Father, the Son and the Holy Ghost (or Spirit) are 'one God as to substance but three persons as to individuality.' All three persons are viewed as being 'coequal and coeternal.' The doctrine is considered to be a mystery that can never be fully understood. But what is the origin of this mystery?—

The *New Catholic Encyclopedia* acknowledges: "There is the recognition on the part of... Biblical theologians, including a constantly growing number of Roman Catholics, that one should not speak of Trinitarianism in the New Testament without serious qualification. There is also the closely parallel recognition on the part of historians of dogma and systematic theologians that when one does speak of an unqualified Trinitarianism, one has moved from the period of Christian origins to, say, the last quadrant of the 4th century. It was only then that what might be called the definitive Trinitarian dogma 'one God in three Persons' became thoroughly assimilated into Christian life and thought." So the Trinity doctrine as believed by the majority of Christendom's church members is admittedly not presented as such in the Bible.

Regarding the formulation of the Trinity doctrine, the *New Catholic Encyclopedia* further observes: "It was the task of the Fathers of the Church and of the early

councils to formulate the mystery of Christ, true God and true man, in accurate and technical terms."

This gives rise to a number of questions: Why is the Trinity doctrine not set forth clearly in the Holy Scriptures? Does the formulating of this "mystery" find any basis in the Bible? Could it be that those who contributed to the development of the Trinity doctrine had actually departed from the teachings of true Christianity?

Already in the first century C.E. false teachers had crept into the Christian church or congregation. The apostle Paul wrote to Christians in Galatia: "There are certain ones who are causing you trouble and wanting to pervert the good news about the Christ. However, even if we or an angel out of heaven were to declare to you as good news something beyond what we declared to you as good news, let him be accursed." (Gal. 1:7, 8) Warning Christians of future developments, the same apostle stated: "The inspired utterance says definitely that in later periods of time some will fall away from the faith, paying attention to misleading inspired utterances and teachings of demons."—1 Tim. 4:1.

Since the Trinity doctrine was not developed fully until the latter part of the fourth century C.E., there is clear possibility that those responsible for its development had apostatized from first-century Christianity. We should therefore want to prove to our own satisfaction whether the Trinity doctrine finds any basis in the Bible or not. Certainly no one desiring to gain God's approval would want to be found following a 'teaching of demons,' that is, a doctrine contrary to God's truth.

It may come as quite a surprise to some that the trinity of Chinese Buddhism is described in almost the same way as the trinity of Christendom: Of this Buddhist trinity, we read: "The Three are all included in one substantial essence. The

three are the same as one; not one, and yet not different; without parts or composition. When regarded as one, the three persons are spoken of as the Perfect One (Tathagata). There is no real difference [between the three persons of the trinity]; they are manifestations, different aspects of the same unchanging substance." Obviously, the formulation of the trinity of Chinese Buddhism had no connection with the Bible.

Could that also be true of the Trinity doctrine of Christendom's churches? *The Catholic Encyclopedia for School and Home* frankly admits: "The Trinity was unknown to people before the time of Our Lord." In an attempt to explain why the Trinity doctrine is not plainly presented in the Christian Greek Scriptures, the *New Catholic Encyclopedia* argues: "In the New Testament the revelation of Christ's divinity was gradual, discreet, and mainly indirect. One never meets a blunt statement: Christ is God. It had to be so if that faith was to find entrance with the Jews." But may it not just as well be that Jesus Christ never claimed to be coequal and coeternal with the Father because this simply was not the case?

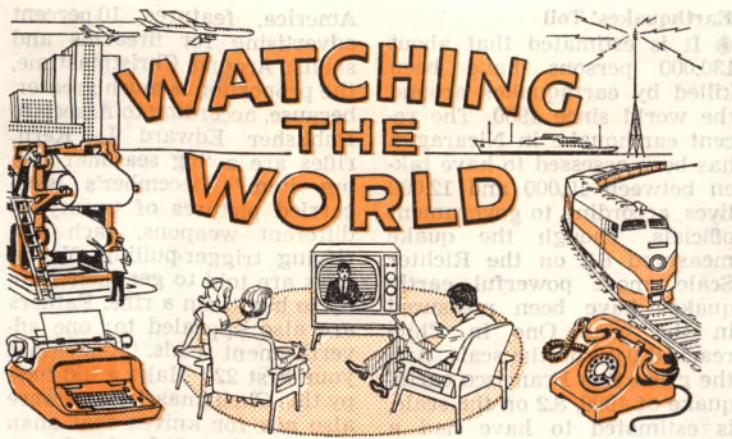

The completed Holy Scriptures do not present the identity of Jesus Christ in concealed language, language that had to be clarified and years later formulated by clergymen into a mystery that no one understands. Jesus Christ is referred to as the "Son of God," not as 'God the Son.' The very fact that he is called "Son" shows that he had a beginning. This is why the Bible speaks of him as being the "firstborn of all creation" and the "beginning of the creation by God."—Col. 1:15; Rev. 3:14.

Even after Jesus' resurrection and ascension to heaven he did not gain a position of equality with his Father. The inspired apostle Paul wrote: "I want you to know that the head of every man is the Christ; in turn the head of a woman

is the man; in turn the head of the Christ is God." (1 Cor. 11:3) "The Son himself will also subject himself to the One who subjected all things to him, that God may be all things to everyone." (1 Cor. 15:28) In the book of Revelation the glorified Lord Jesus Christ repeatedly speaks of his Father as "my God." At Revelation 3:12, for example, we read: "The one that conquers—I will make him a pillar in the temple of *my God*, and he will by no means go out from it anymore, and I will write upon him the name of *my God* and the name of the city of *my God*, the new Jerusalem which descends out of heaven from *my God*, and that new name of mine." This is in full harmony with Jesus' earlier statement to Mary Magdalene: "I am ascending to my Father and your Father and to my God and your God."—John 20:17.*

In view of the clear testimony of the Scriptures, the Trinity doctrine is what the *New Catholic Encyclopedia* acknowledges it to be—a mystery formulated by men living years after the Holy Scriptures were committed to writing. The formulation of this mystery in supposedly "accurate and technical terms" has, in reality, so confused matters that throughout the centuries millions have been unable to see the difference between the expressions "Son of God" and "God the Son." Instead of bending the knee in the name of Jesus and acknowledging him as Lord to the glory of God the Father, they have worshiped something they admittedly do not understand—a mysterious triune God. (Phil. 2:10, 11) The Trinity doctrine has thus made it impossible for millions to worship God "with spirit and truth" and has dishonored God by denying that he alone is the Supreme Sovereign of the universe.—John 4:24.

* For a detailed discussion, see the booklet "*The Word*"—Who Is He? According to John and the book Aid to Bible Understanding, pp. 918-920.

"Green Revolution" Fading

◆ An editorial in the *New York Times* of January 2, 1973, painted a sobering picture of the "green revolution." It observed: "Less than one year after agricultural experts were predicting a world rice glut as a result of the introduction of new 'miracle' seeds, there have been reports in recent weeks of widespread food shortage in Asia and parts of Africa. The great promise of the green revolution, which was never as green as it was sometimes pictured, appears to be fading." Bad weather "has sharply cut crops this year in the Philippines, South Korea, Indonesia, Malaysia, Cambodia, Thailand, Burma, India and African states bordering the Sahara Desert. . . . The return of favorable crop-growing weather next year would probably forestall any early worldwide food emergency. But the acute problems faced by many nations as a result of one year's climatic vagaries are a sobering reminder of the persisting precariousness of the world's food-population balance."

College Crime

◆ The Burns Security Institute reports that fifty-eight campus police chiefs are having more trouble with stealing than with bomb threats and

demonstrations. A University of California detective sergeant remarked that college thieves "steal everything, even if it is nailed down. They take bulletin boards off the walls. They take office equipment that is chained or bolted down." Wallets, watches, cameras, stereos, typewriters, adding machines and bicycles are snatched. One item usually ignored by thieves is textbooks. Also, campuses are rapidly becoming places of violent crimes and rape. Some colleges provide escort service for women going from their dormitories to the library.

Blood Transfusion Liability

◆ According to a recent court case in New Jersey, hospitals and blood banks are strictly liable for the death of a patient due to hepatitis from blood transfusion. It was pointed out that by putting blood on the commercial market, a blood bank makes itself liable. The court quoted an earlier case saying, "If the article [blood] left the defendant's control in a dangerously unsafe condition, . . . defendant is liable whether or not he was at fault in creating that condition or in failing to discover and eliminate it." Further, the court held, transfused blood is a "product"—not simply a "service"—and its transfer constitutes a sale.

Who Is to Blame?

◆ Jack E. Rooper, himself a minister and a religious writer, denounced the clergy for the failure of Christendom's churches. He observed that "the local organized body which we call a church is nothing more than a big sham, a disgrace, and, in many instances, the laughing stock of the unsaved community." And who did he say was responsible for this? "I believe the one major cause of the local church's rapidly declining state rests entirely upon the shoulders of the pastors and evangelists. . . . The majority of the so-called pastors of today are nothing more than weak-kneed, yellow-bellied, greasy-tongued, two-faced, compromising excuses for preachers. . . . Most of the local pastors are nothing more than money-hungry, people-pleasing preachers; and because of this kind of pastors serving our local churches, it's no wonder they are in such sad conditions. We don't blame the common ordinary soldier for the condition of the army. No, we place the blame on the generals. If a company is losing money, we don't place the blame on the employees; we say it is due to poor management. So the same principle holds true for the local church. If the attendance is falling off, zeal is diminishing, and the church is losing its influence in the community, then the responsibility must rest squarely on the shoulders of the pastors."

Mariolatry Declining

◆ Worship of Mary in the Catholic Church is said to be declining. Eamon Carroll, Catholic professor of theology at the Washington, D.C., Catholic University, bemoaned the fact that there has been a "dramatic decline" in Marian devotion, such as public rosaries, novenas and other rites connected with Mariolatry. A few years ago these played a prominent role in the lives of

Catholics. "To many," he said, "it seems as if the elaborate structure of Marian piety suddenly collapsed." He feels that it might be a result of the Catholic laity's reaction to some of the debates on Mary's place during the Second Vatican Council.

Nuclear Power Attacked

◆ The potential danger of nuclear power plants in the United States is causing grave concern among many. Recently, Ralph Nader, consumer advocate, joined the Union of Concerned Scientists in a statement expressing fears about building such plants near large metropolitan areas. "Although no nuclear explosion can occur, there is still the release of prodigious quantities of radioactive materials" if a loss-of-coolant accident happens. Nader said: "This is the first time that this country has permitted development of an industry that can wipe this country out. We spend billions on defense while creating a basic vulnerability here. There's no responsibility. If a nuclear plant goes, who loses his job? Who goes to jail? Who's fired? Nobody's accountable."

Rise of Heart Disease

◆ Until 1910 tuberculosis was the foremost cause of death among Americans. Pneumonia and other infectious diseases followed closely. The development of antibiotics reduced many of these diseases. The National Center for Health Statistics revealed that between 1911 and 1920 heart disease and tuberculosis were close contenders for first place as the leading killer in the United States. In 1921, 14 percent died from heart disease. But from 1921 onward, heart disease moved into the number one spot and increased its hold there over the years. Today 39 percent of all deaths in the nation are from heart trouble.

Earthquakes' Toll

◆ It is estimated that about 130,000 persons have been killed by earthquakes around the world since 1950. The recent earthquake in Nicaragua has been assessed to have taken between 10,000 and 12,000 lives, according to government officials. Though the quake measured 6.2 on the Richter Scale, more powerful earthquakes have been measured in the past. One in Chile reached 9.9.2 on the scale. And the great San Francisco earthquake of 1906, 8.2 on the scale, is estimated to have had a force about a hundred times greater than the one that devastated Managua, Nicaragua. Fears are being expressed that San Francisco is due for another quake. According to B. A. Bolt, director of the seismographic station at the University of California, a 270-mile section of crystal rocks in California is strained "like a watch spring" and "one day they will snap, skidding the ground and everything on it a few feet forward."

Map Changes

◆ Today many governments and peoples dispute over who owns what territory. This gives map makers problems. Border changes and new names of countries are coming so rapidly that they cannot get them on new maps. The formation of Bangladesh, and the difficulties between India and Pakistan, as well as Honduras and Nicaragua, along with other Latin-American disputes, are but a few situations that can quickly make maps outdated. Ceylon has taken up her old name Sri Lanka, and Cambodia has changed its name to the Khmer Republic. It will no doubt take a while before the map-reading public catches up.

Boy Scouts and Firearms

◆ *Boy's Life*, a monthly magazine of the Boy Scouts of

America, features 10-percent advertising for firearms and shells. Around Christmastime, the proportion is much greater, because, according to Associate Publisher Edward L. Kern, rifles are a 'big seasonal selling item.' December's issue carried pictures of twenty-six different weapons, each glorifying trigger-pulling. Young boys are told to get their family to buy them a rifle. Fathers are also appealed to; one advertisement reads, "Remember your first 22? Make a kid happy this Christmas." There were also ads for knives that snap open with the flick of a finger, a 24-pound navy cannon replica that "really shoots" and a midget pistol that fires tiny high-compression blanks. Out of twenty-seven ad pages, eight were devoted to lethal weapons and ammunition. Scout officials claim that, since "firearms are here to stay," gun training and safety are important so boys that pick up a rifle will know "which end is which."

Car Pollution-Control Failures

◆ The two most pollution-plagued states in America have been testing automobiles equipped with pollution-control devices. Results show that many of the devices are failing to control pollution. In New Jersey 30 percent of the 1970 cars and 25 percent of the 1971 cars did not meet the state's moderate requirements. In California, where the standards are more stringent, 41 percent of the 1970 and 1971 models failed. In fact, 30 percent of all the automobiles tested there failed. The mechanisms designed to control pollution on the late-model cars are delicate and easily thrown out of kilter. Many mechanics do not know how to adjust or install them properly, further worsening the problem. In California over 50 percent of the pollution-control mechanisms installed in 1955-65 automobiles were not put in correctly.

Jordan River Polluted

◆ According to Yosef Tamir, Israel's parliamentary committee on environment chairman, the Jordan River is turning into a 'sewage drain.' Below the Sea of Galilee, the water is unfit to drink due to the river's being full of garbage and farming chemicals. He declared that every river in Israel is polluted and that "drastic action" must be taken now to save the Jordan.

What It Takes to

Be President

◆ Ex-president of the United States Harry S. Truman died in December 1972. He once wrote to his daughter, Margaret, that to be a good president a man "can't live the Sermon on the Mount." He pointed out that a president "must be a Machiavelli, Louis XI of France, Caesar, Borgia . . . a liar, double-crosser, a

hero and a what-not to be successful."

Guests Being Counted

◆ The police in New Delhi, India, have been authorized to arrest any host who invites too many people to dinner and serves them too much food. The "Guest Control Order" allows up to twenty-five guests and a four-course meal. Marriages and funerals are exempt. Up to a hundred guests are allowed for these occasions. The four courses of food allowed must be no more than one meat dish, one vegetable dish, one rice dish and one dessert. Though the order has been in effect for over four years, now it is being strictly enforced. Why? It is an attempt to conserve food in anticipation of famine.

Japanese Getting Bigger

◆ Japan's Education Ministry statistics reveal that Japanese

children are getting bigger. A recent survey involving 340,000 children and youths, from nursery school to university, shows a marked growth pattern. Today's 12-year-old Japanese boy is two and a half inches taller, ten pounds heavier, and an inch larger around his chest than a boy his age in 1962. For the same age the Japanese girl of today is two inches taller, eight pounds heavier, and one and a half inches larger around her chest. The growth is believed to be from changes in diet since the close of World War II in 1945.

Aviation Death Toll

◆ Statistics for 1972 show that it was the worst year on record for air crash deaths. More than 1,700 persons lost their lives on commercial flights. The previous record was in 1966, when just over 1,000 persons died.

opportunity into the better part of a century. Between 1900 and 1940, however, the number of immigrants to America fell to less than half of what it was in 1850. This was due to the fact that the United States had become a major power in the world, and its influence extended far beyond its borders. The Great Depression of 1929 also contributed to the decline in immigration.

II in 1945.

Avalanche Deaths Hit All
◆ Avalanche deaths for 1945 show that it was the steepest, most difficult year ever. More than 1,000 persons lost their lives in countries affected by avalanches. Some 1,000 more lost their lives in the Americas, while 1,000 more lost their lives in Europe. The total number of deaths in all countries affected by avalanches was over 3,000.

◆ Fortified a base camp
against the winter.

General People's Congress

◆ The people in New Delhi to discuss the future of India, and their demands to the government of India, have announced that they will march to the gates of the Indian Parliament on December 12, 1947, to demand that the Indian government grant them their demands. The "General People's Congress" is a political party that has been formed by a group of Indian leaders who want to end the British rule over India.

◆ Avalanche deaths hit all areas of the country. The total number of deaths in all countries affected by avalanches was over 3,000.

Japan's Black Parade

◆ According to Yomiuri Shimbun, the Japanese government has decided to ban the sale of tobacco products in Japan. The ban is intended to reduce the use of tobacco among smokers, and to encourage smokers to quit smoking. The ban is expected to take effect in January 1948.

World War II Deaths

◆ Explosions at the United States Navy Yard in December 1945. The cause of the explosion was due to the detonation of a bomb placed on the deck of the ship. The explosion killed 12 sailors and injured 10 others. The ship was later repaired and returned to service.
